REMARKS: This variable appeared in 1987, 1993, 1994, 1996, 2000, 2008, and 2010. See EQINCOME for similar question. This question was self-administered before 2008; it has since been administered by interviewers. From 1987 through 2000, the category "Can't choose" appeared on the questionnaire; since 2008, "Don't know" has been used instead. In 1996 and 2010, responses used on the questionnaire were "Agree strongly" and "Disagree strongly" instead of "Strongly agree" and "Strongly disagree". In 2010, due to a programming error, DKs and NAs were not separately coded; they were later separated based on the pattern of responses to adjoining questions.

1484. These five diagrams show different types of society. Please read the descriptions and look at the diagrams and decide which you think best describes America today. . .

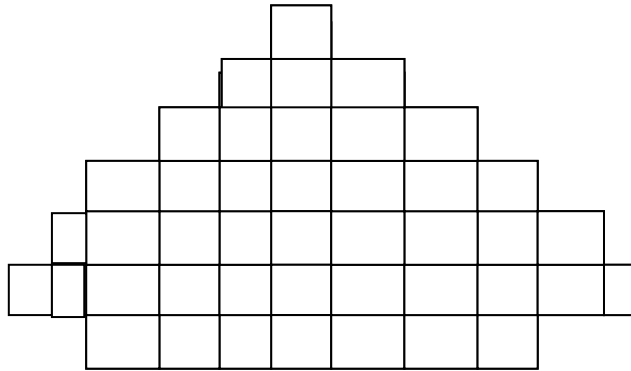

Type A: A small elite at the top, very few people in the middle and the great mass of people at the bottom.

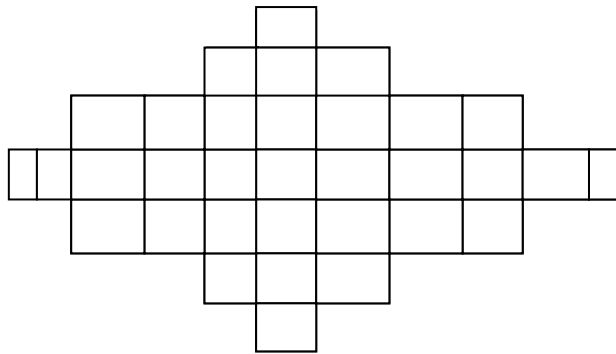

Type B: A society like a pyramid with a small elite at the top, more people in the middle, and most at the bottom

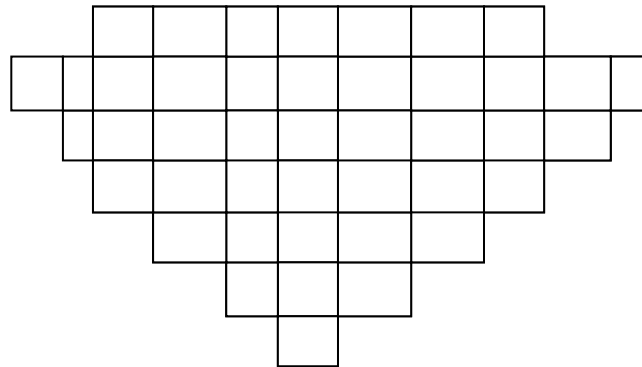

Type C: A pyramid except that just a few people are at the very bottom

Type D: A society with most people in the middle

Type E: Many people near the top, and only a few near the bottom

First, what type of society is America today - which diagram comes closest?

REMARKS: Qs. FAMSUFFR and HUBBYWRK were asked as part of the 1991 ISSP module on religion; see also Qs. SPIRITS, GRACE, NEARGOD, GOD, JOBSALL, EQUALIZE, HAPUNHAP-ANTIREL. In 1994, TWOINCS used "man" and "woman." In 2002, in Qs. MAWRKWRM-FAMSUFFR, HOMEKID-FEJOBIND, the "disagree" category (punch 5) was collapsed to reflect both disagree and "strongly disagree" response options.

To begin, we have some questions about where you live: your neighborhood or village, your town or city, your county, and so on.
(By neighborhood we mean the part of the town/city you live in. If you live in a village, we take this as your neighborhood.)

1716. How close do you feel to...

SUICIDE
(SUINUM - SUIMTHS1)

1806. The next questions deal with a difficult topic that may be sensitive for you. It is not clearly understood how a relative or friend's death by suicide may affect one's life afterwards. Please answer these questions as best as you can, and you can decline to answer any question if you are uncomfortable.

Over your lifetime how many people have you known personally that died by suicide? Please tell us the total number of people that died by suicide.

PROBE: IF R REPORTS NUMBER OF KNOWN SUICIDE VICTIMS=0, ASK: Just to be sure, thinking about anyone you may have known in your lifetime, is there anyone you have known personally that died by suicide?

**RACIAL/ETHNIC IDENTITY
(RACETHWH - RACETHMN)**

1838. In describing our background, we often ask someone which racial or ethnic groups best describes them. Imagine if we used instead a 10 point system where points are allocated to whichever racial or ethnic groups the respondent thinks accurately describes themselves. For example, if you think of yourself as just Latino, you would allocate all 10 points to Latino. Or if you think of yourself as mixed race, but more African American than white, you might allocate 6 or 7 points to black and 3 or 4 points to white. Thinking of your background in racial and ethnic terms . . .

How would you describe your race and ethnicity using this 10-point system using the following choices:

HAND CARD K1

**FLEXIBLE WORK
(PAIDHOW - ADVSCHED)**

1839. In this section, we ask about your work hours and how you are paid. When referring to jobs, we are referring to jobs for which you work for pay, not volunteer work, unpaid housework, or other unpaid activities. When we refer to work hours, we ask you to include all hours performed for a paid job, including any extra hours, overtime, work you did at home for your paid job, and hours that may not have been directly billable or compensated.

Are you salaried, paid by the hour, or paid some other way? If you have more than one job, think of the job in which you spend the most hours working each week.

REMARKS: PARTNERS-SEXORNT were self-administered. In 1988 on form 1, the questions were proceeded by "Now we would like to ask you some additional questions. Your answers are confidential and will be used only for statistical reports." Form 2 said, "There is a great deal of concern today about the AIDS epidemic and how to deal with it. Because of the grave nature of this problem, we are going to ask you some personal questions and we need your frank and honest responses. Your answers are confidential and will be used only for statistical reports." Since 1989 the "AIDS" introduction was used on all cases. Also in 1989 SEXFREQ1 appeared first on the card on Form 2, immediately prior to MATESEX. On Form 1 PARTOPN5 appeared immediately following PARTOPEN. In 1990 MATESEX was asked on form 1 and SEXSEX was asked on form 2. In 1991 PARTNERS was asked on form 1 and SEXFREQ2 on form 2. In 1991 NUMMEN was asked on form 1 and NUMWOMEN on form 2. People who did not do this supplement are coded as IAP. See Appendix T, GSS Methodological Reports Nos. 56 and 65.

**GENES
(GENETEST - GENDEF3)**

The next few questions are about a special technique called "genetic screening," which makes it possible to predict whether or not a person is likely to develop certain inherited diseases.

1943. A. How much would you say you have heard or read about genetic screening - a great deal, something but not very much, or nothing at all?

1945. Today, tests are being developed that make it possible to detect serious genetic defects before a baby is born. But so far, it is impossible either to treat or to correct most of them. 1957. Now, I'm going to ask you about various events and conditions that happen to people. I'm interested in those that happened to you during the last 12 months, that is since (CURRENT MONTH), (1990/2003). As I ask you about the specific events, please think carefully, so I can record things accurately.

A. First, thinking about health related matters, did any of the following happen to you since (CURRENT MONTH, 1990/2003)?

1. Ill enough to go to a doctor.

REMARKS: POVLINE and INCDEF used government definitions of poverty status to classify households. Imputed cases (codes 2,4,6 on POVLINE) calculated poverty status based on estimated income values. Borderline cases (Codes 5,6 on POVLINE) are those whose income category straddled the poverty line cut-off (e.g. a household income of income \$10,000 to \$14,000 in 1976 when the line was at \$12,493 for a family of 9 with 2 children). Note that negative values for INCDEF indicate that the respondent's household is below the poverty line. For full details see Appendix T, GSS methodological Report No. 57.

1970. When faced with the conflict between an individual's right to privacy and the government's need to collect personal background information before giving a SECRET or TOP SECRET clearance, the government should:

1. Favor protecting an individual's right to privacy by not gathering information.
2. Favor the government's need to protect security by gathering information.

REMARKS: The change in distributions between 2012 and 2014 does not reflect any real change in the distribution of this variable. It appears to result mostly from a slightly lighter shading used for the Lightest (code 1) category in 2012 than in 2014. This drew in fewer ratings in 2012 than the slightly darker Lightest (code 1) category displayed in 2014. The differences in distributions are mostly limited to changes between codes 1 and codes 2.

**VOCABULARY TEST
(WORDA-WORDSUM)**

2000. We would like to know something about how people go about guessing words they do not know. On this card are listed some words-- you may know some of them, and you may not know quite a few of them.

On each line the first word is in capital letters -- like BEAST. Then there are five other words. Tell me the number of the word that comes closest to the meaning of the word in capital letters. For example, if the word in capital letters is BEAST, you would say "4" since "animal" come closer to BEAST than any of the other words. If you wish, I will read the words to you. These words are difficult for almost everyone -- just give me your best guess if you are not sure of the answer.

CIRCLE ONE CODE NUMBER FOR EACH ITEM BELOW.

REMARKS: See Appendix D: Recodes, for discussion of word test. Card A21 and A22 list Words and Choices. In 2008 an error in a skip instruction was discovered shortly before the start of the field period. It was not possible to correct the error until after data collection had started. The program correction was implemented starting April 25. As a result, 151 cases in the cross-sectional on versions 1 or 2 who should have been asked vocabulary questions were wrongly skipped. More details on this sample matter are available from the project.

**HOUSEHOLD MEMBERS AND STRUCTURE
(RELATE1-RELSP14)**

2008. Please tell me the names of the people who usually live in this household. Let's start with the head of the household. [LIST ON LINES 01-10 BELOW.]

Have we forgotten anyone: such as babies or small children; roomers; people who usually live here, but are away temporarily--on business trips, temporarily in a hospital, and so on? [LIST ADDITIONAL PERSONS ON LINES 01-10 BELOW.]

Are there any people currently staying here--visitors, friends or relatives--do not usually live here? [LIST VISITORS ON LINES 11-14 BELOW.]

- A. What is that [PERSON'S] relationship to the HEAD OF HOUSEHOLD?
- B. Code sex. [ASK IF NOT OBVIOUS].
- C. How old was [HEAD/PERSON] on (his/her) last birthday?
- D. IF 13 YRS OR OLDER ASK: Is [PERSON] now married, widowed, divorced, separated, or has (he/she) never been married?
- E. Are any of the people we have listed staying somewhere else right now? If yes, who is staying somewhere else right now?
- F. Where is [PERSON] staying right now? Is [PERSON] staying at another household; Is (he/she) traveling; Is (he/she) in some institution or dormitory--like at college or in a hospital or something; or what?

REMARKS: For relation to head see RELATE1 and RELHHD1. See GSS Methodological Report No. 73. Over the years, the variables of household composition have changed twice. The RELATE1-14 series has been asked over all the years of the survey. In 1993, extra categories were added and, because of this, the variable names were changed to RELHHD1-14. In 2000, two additional changes were made. First, the definition of head of household was changed from "head of household" to "the person or one of the persons who own or rents this home." Second, additional categories were added about children. Because of this, a new household composition series, RELHH1-14, was created. RELHH variables can be collapsed into the RELHHD format and the RELHHD variables can be collapsed into the RELATE series.

REMARKS: Over the years, the variables of household composition have changed twice. The RELATE1-14 series has been asked over all the years of the survey. In 1993, extra categories were added and, because of this, the variable names were changed to RELHHD1-14. In 2000, two additional changes were made. First, the definition of head of household was changed from "head of household" to "the person or one of the persons who own or rents this home." Second, additional categories were added about children. Because of this, a new household composition series, RELHH1-14, was created. RELHH variables can be collapsed into the RELHHD format, and the RELHHD variables can be collapsed into the RELATE series.

REMARKS: This variable classifies households from information on the household enumeration form (HEF) on the basis of 1) number of adults (household members 18 and older), 2) the presence of children (0 vs. 1+ household members less than 18), 3) number of married people in the household, 4) relation of second or third listed persons to head (in households with 2 or 3 adults), and 5) gender of head and second listed person when second listed person is not related to the head (in households with two adults). When the HEF roster counts differed from the processed HEF variables (ADULTS, BABIES, PRETEEN, TEENS, HOMPOP), the processed values were utilized. This generally means that household members away from the housing unit and living in another household or institution were not counted for this variable (see above AWAY1-14 and WHERE1-14). Visitors not absent from the household are counted.

REMARKS: This variable is a collapse or recode of HHTYPE. The categories are explained below.

- (1) Married couple with no children = 2 or more adults with either respondent being married or two or more members being listed as married with no one under age 18.
- (2) Single parent = 1 adult and 1 or more members under age 18.
- (3) Other family, no children = 2 or more adults with 2nd or 3rd person listed related to head of household; no married couple and no household members under age 18.
- (4) Single adult = 1 adult and no one under age 18.
- (5) Cohabiting couple, no children = 2 adults of different genders not married nor related to each other. This category covers most, but not all, cohabiting couples. Excluded are cohabiting couples in which relationship and/or gender information was missing or households with three or more adults with at least one unrelated to the others. Also, same sex cohabiting couples are excluded. See GSS Methodological Report No. 73 for more details.
- (6) Non-family, no children = 2 adults with 2nd listed person unrelated to head and same gender as head and no one married, or with three or more adults with the 2nd and 3rd persons unrelated to head.
- (8) Unsure, no children = 2 or more adults, unmarried or with relationship and/or marital information unclear or conflicting, but with no one under age 18.

REMARKS: This variable indicates how many direct family generations (e.g. grandparent, parent, child) reside in the household. It counts children-in-law and parents-in-law as direct relations, but does not count collateral relatives (e.g. nieces and nephews, aunts and uncles). In addition, it is impossible to identify grandparents (or above) of the head. It should be noted that for FAMGEN children were defined by their relationship to household head, not by their age as in HHTYPE. All regular household members and visitors listed on the roster are counted regardless of presence. For more details, see NORC Methodological Report No. 73.

REMARKS: Over the years, the variables of household composition have changed twice. The RELATE1-14 series has been asked over all the years of the survey. In 1993, extra categories were added and, because of this, the variable names were changed to RELHHD1-14. In 2000, two additional changes were made. First, the definition of head of household was changed from "head of household" to "the person or one of the persons who own or rents this home." Second, additional categories were added about children. Because of this, a new household composition series, RELHH1-14, was created. RELHH variables can be collapsed into the RELHHD format, and the RELHHD variables can be collapsed into the RELATE series.

2020. What is (NAME)'s relationship to spouse?

2109. One important purpose of our survey is to gather information about our society in order to explain trends in attitudes and behaviors. The GSS seeks to support the study of opinion data with more behavioral, fact-based information. To do this, we need your permission to search government records that may exist now or in the future such as Census data, unemployment or social security information, Medicaid and Medicare, health records and other sources. We would link your interview with that information upon completion of the survey. Also, we would like to be able to continue combining these data for the foreseeable future. Each time, in the future, we will remove personally identifiable information after the linking process, and store anonymous data for the duration of our study. The best way for us to get this information without taking up any more of your time is to conduct the work in a secure data facility meeting strict Federal Information Security Management Act requirements, and we need your permission to proceed. All identifying information will be kept confidential as required by law. If at any time you change your mind, you can contact us at the toll-free number 888-XXX-XXXX.

May we try to link government records with your survey answers?

REMARKS: In 1994 there were 9 versions of the questionnaire. Versions 1-6 were administered to random 1/12ths of the sample. Versions 7-9 were administered to random 1/6ths of the sample. Sample A was comprised of Version 1-6 in 1994 and 1-3 in 1996-2002. Sample B was made up of Versions 7-9 in 1994 and 4-6 in 1996-2002. In 2006 there was a version 7. It did not follow the standard rotation pattern. See Appendix Q.

REMARKS: In 2004 two ISSP modules were asked on versions 4-6 and none on versions 1-3. The Citizenship module (FINDJOB-WKTENURE) was interviewer administered and as such there was no self-completion non-response. The National Identity module (CLSENEI-SCITESTY, SPWRKGVT) was self-administered in the usual ISSP manner. The ISSP variable in 2004 refers to the outcome for the National Identity module. From 2006 onwards, the ISSP was not a self-completion supplement. The "did not do ISSP" category in 2006 has no cases in it. Beginning in 2014, all respondents completed at least one ISSP module.

2134. Weight for form variables.

[VAR: FORMWT]

This weight in FORMWT should be used whenever any of the forms comparisons are being analyzed. See Appendix A for an explanation of the weight.

2135. SAMPLING ERROR CODE.

[VAR: SAMPCODE]

The "Sampling Error Code" in SAMPCODE is provided for the convenience of persons who wish to study within-cluster and between-cluster variations in the GSS. Values of the code range from 101 to 218 and 301 to 384. Values 101 to 201 represent one of the primary sampling units (PSUs) in the 1970 NORC National Sampling Frame. Values 202 and 218 represent the 17 PSUs in the 1980 black sample frame. Values 301 and 384 represent the 1980 NORC National Sample Frame. Values 1-100 represent the 1990 NORC National Sample Frame. Values of 501-579 represent the 2000 NORC National Sample Frame. Codes are assigned so that one can obtain properly stratified subsamples of the PSUs by taking every second (or every nth) value of SAMPCODE. The "Sampling Error Code" is blank for all 1972 cases, since the 1972 survey did not use 1970, 1980, 1990, 2000, or 2010 sampling frames.

2136. The GSS has employed various sampling procedures and frames. Appendix A gives full detail.

2140. Before 2006 the GSS was only administered in English. Those without enough English to do the interview were excluded as out-of-scope, language problems. In 2006 a Spanish version of the GSS was added. REMARKS: Starting in 2006 interviews were conducted in Spanish as well as English. Because the support for adding Spanish interviews came so late in the development of the 2006 survey, it was possible only to translate and administer those sections funded by the core GSS grant. Thus, supplemental modules in 2006 were administered only to English speakers, as previously. Starting in 2008, all sections are fielded in both English and Spanish.

2147. Weight of variables.

[VAR: WTSS]

Due to the adoption of the non-respondent, sub-sampling design, a weight must be employed when using the GSS 2004 and after. WTSS variable takes into consideration a) the sub-sampling of non-respondents, and b) the number of adults in the household. It also essentially maintains the original sample size. In years prior to 2004+ a one is assigned to all cases so they are effectively unweighted. To adjust for number of adults in years prior to 2004, a number of adults weight would need to be utilized.

2148. Weight of variables.

[VAR: WTSSNR]

It is similar to WTSS, but adds in an area non-response adjustment. Thus, this variable takes into consideration a) the sub-sampling of non-respondents, b) the number of adults in the household, and c) differential non-response across areas. It also essentially maintains the original sample size. As with WTSS, WTSSNR has a value of one assigned to all pre-2004 cases and as such they are effectively unweighted. Number of adults can be utilized to make this adjustment for years prior to 2004, but no area non-response adjustment is possible prior to 2004.

2149. Weight of variables.

[VAR: WTSSALL]

As mentioned above, WTSSALL takes WTSS and applies an adult weight to years before 2004. The weight value of WTSSALL is the same as WTSS for 2004 and after. Thus, researchers who use the GSS data before or after 2004 may consider using the WTSSALL weight variable.

APPENDIX A:

SAMPLING DESIGN & WEIGHTING

In the original National Science Foundation grant, support was given for a modified probability sample. Samples for the 1972 through 1974 surveys followed this design. This modified probability design, described below, introduces the quota element at the block level. The NSF renewal grant, awarded for the 1975-1977 surveys, provided funds for a full probability sample design, a design which is acknowledged to be superior.

Thus, having the wherewithal to shift to a full probability sample with predesignated respondents, the 1975 and 1976 studies were conducted with a transitional sample design, viz., one-half full probability and one-half block quota. The sample was divided into two parts for several reasons: 1) to provide data for possibly interesting methodological comparisons; and 2) on the chance that there are some differences over time, that it would be possible to assign these differences to either shifts in sample designs, or changes in response patterns. For example, if the percentage of respondents who indicated that they were "very happy" increased by 10 percent between 1974 and 1976, it would be possible to determine whether it was due to changes in sample design, or an actual increase in happiness.

There is considerable controversy and ambiguity about the merits of these two samples. Text book tests of significance assume full rather than modified probability samples, and simple random rather than clustered random samples. In general, the question of what to do with a mixture of samples is no easier solved than the question of what to do with the "pure" types. Investigators who have applied statistical tests to previous General Social Survey data should continue to apply those tests. Investigators who have refrained from applying such tests may now want to perform analyses on the probability subsample. This would, of course, reduce the number of cases by one-half. Whatever choice investigators make, it should be remembered that the two subsamples represent the same universe.¹

Having allowed for the appearance of all items in the transitional sample design, the General Social Survey then switched to a full probability sample for the 1977+ surveys. The variable SAMPLE can be used to separate the block quota and full probability samples on the 1975 and 1976 surveys.

A similar split sample transition design was used in the 1983 survey to measure the effect of switching from the 1970 sample frame to the 1980 sample frame. Half of the sample was drawn from the 1970 frame and half was drawn from the 1980 frame. The variable SAMPLE separates cases from these two sample frames. Again in 1993, a split sample transition design was employed on the 1993 survey to measure the effect of switching from the 1980 sample frame to the 1990 sample frame. Half of the sample was drawn from each frame. In 2004 a new frame based on the 2000 census was adopted. In 2012, a new sample frame based on the 2010 census was implemented. More details on the 1970, 1980, 1990, 2000, and 2010 sample frames as well as the block quota samples appear below.

The adult, household population of the United States covered about 97.3% of the resident population of the United States in 1985. Coverage varies greatly by age group. For those 18-24, 9.4% of the population in 1980 lived outside of households (mostly in college dorms and military quarters). Among age groups from 25 to 64 the only 0.8-1.4% of the population lived outside of households. For those 75 and older 11.4% were in group quarters, mostly in nursing homes and long-term care facilities. For more details on the non-household population see Living Arrangements of Children and Adults, Census of Population, PC80-2-413, May, 1985.

Until 2006 the GSS only sampled the English speaking population. As defined for the GSS in 1983-1987, 98% of the adult, household population is English speaking. The number of non-English speakers excluded is indicated in Table A.8. Spanish speakers typically make up 60-65% of the language exclusions. About a dozen languages make up the remaining exclusions. Starting in 2006 the GSS samples Spanish speakers in addition to English speakers.

BLOCK QUOTA

The sample is a multi-stage area probability sample to the block or segment level. At the block level, however, quota sampling is used with quotas based on sex, age, and employment status. The cost of the quota samples is substantially less than the cost of a full probability sample of the same size, but there is, of course, the chance of sample biases mainly due to not-at-homes which are not controlled by the quotas. However, in order to reduce this bias, the interviewers are given instructions to canvass and

interview only after 3:00 p.m. on weekdays or during the weekend or holidays. This type of sample design is most appropriate when the past experience and judgment of a project director suggest that sample biases are likely to be small relative to the precision of the measuring instrument and the decisions that are to be made.

Selection of PSUs

The Primary Sampling Units (PSUs) employed are Standard Metropolitan Statistical Areas (SMSAs) or non-metropolitan counties selected in NORC's Master Sample. These SMSAs and counties were stratified by region, age, and race before selection.²

Selection of Sample within PSUs

The units of selection of the second stage were block groups (BGs) and enumeration districts (EDs). These EDs and BGs were stratified according to race and income before selection.³ The third stage of selection was that of blocks. The blocks were selected with probabilities proportional to size. In places without block statistics, measures of size for the blocks were obtained by field counting. The average cluster size is five respondents per cluster. This provides a suitable balance of precision and economy.

Interviewer Instructions

At the block or segment level, the interviewer begins a travel pattern at the first DU (dwelling unit) from the northwest corner of the block and proceeds in a specified direction until the quotas have been filled.

The quotas call for approximately equal numbers of men and women with the exact proportion in each segment determined by the 1970 Census tract data. For women, the additional requirement is imposed that there be the proper proportion of employed and unemployed women in the location. Again, these quotas are based on the 1970 Census tract data. For men, the added requirement is that there be the proper proportion of men over and under 35 in the location.

These particular quotas have been established because past experience has shown that employed women and young men under 35 are the most difficult to find at home for interviewing.

Sampling Error

Although the mean squared error cannot be estimated directly from a quota sample, one can make estimates of sampling variability using procedures such as those outlined by Stephan and McCarthy.⁴ Past experience would suggest that, for most purposes, this sample of 1,500 could be considered as having about the same efficiency as a simple random sample of 1,000 cases. In making this judgment concerning the design effect, we are concerned with the "average" effect upon a large set of different variables of the clustering of households at the last stage of selection.⁵ Any statement of sampling error assumes that the bias in quota sampling due to the lack of control over respondent availability is slight for the study under consideration.

For those persons interested in investigating the within-sample variability of these data, we have included SAMPCODE ("sampling error code"), VSTRATA (variance stratum), and VPSU (variance primary sampling unit). Information about the use of this code is available from the GSS project staff at NORC.

Probability, 1970 Frame

The NORC national probability sample is a stratified, multistage area probability sample of clusters of households in the continental United States.⁶ The selection of geographic areas at successive stages is in accordance with the method of probabilities proportional to size (p.p.s.). Furthermore, the clusters of households are divided into replicated subsamples in order to facilitate estimation of the variance of sample estimators of population characteristics.

⁶Alaska and Hawaii are not included in this sample.

At the first stage of selection, Standard Metropolitan Statistical Areas (SMSAs) and nonmetropolitan counties covering the total continental United States were grouped according to size strata within the nine Census regions. All population figures and other demographic information were obtained from 1970 Census reports. Within each size stratum grouping based upon geographic location, or racial characteristics (or both), was accomplished before selection. The final frame was further separated into zones or "paper strata" of equal population size in order to facilitate the selection of replicated subsamples of primary sampling units (PSUs).⁷ The selection of PSUs was designed to produce four independent subsamples of equal size. The four subsamples were randomly combined to form two larger subsamples of 101 PSUs each.⁸ The large subsamples are thus internally separable into two replicated subsamples for variance estimation purposes.

NORC has selected one of the two large subsamples described above to serve as its principal frame of households for the remainder of the decade. The PSUs fall into 89 distinct SMSAs and nonmetropolitan counties. (New York, a very large SMSA, represents five PSUs, whereas the smaller counties represent only one PSU.)

The second-stage procedure involved the direct selection of Census block groups or enumeration districts (E.D.s) within SMSAs or counties, eliminating the traditional intermediate stage of clustering selections within urban places or county division. The increase in geographic dispersion within the primary areas has a negligible effect on field costs. Before selection, the Census tracts, minor civil divisions, and Census county divisions containing the block groups and E.D.s were carefully stratified by geographic location, income, and race, in order to maximize the precision of sample estimation within a PSU. Block groups and E.D.s were then selected with probabilities proportional to size in numbers sufficient to satisfy survey demands for households expected throughout the decade. Lists of the separate households contained in the second stage blocks or E.D.s were constructed by field personnel or obtained from directories. Thus, the principal NORC national probability sample is, in effect, an inventory of identifiable households, each with a known probability of selection. In a typical sample survey with equal probability of selection for individual households (i.e., a self-weighting sample), households at which interviews will take place are probabilistically selected from the available lists of addresses for blocks and E.D.s. The method of probabilities proportional to size results in the assignment of approximately equal numbers of interviews in each final stage cluster, which in turn leads to increased precision in the estimation of overall population characteristics.

The NORC national probability frame, with its broad geographic dispersion, its reserves of additional SMSAs and counties, and its built-in replication, provides sufficient flexibility for application to a wide range of survey tasks. Its design is based on the consideration of sampling problems that NORC and other organizations have encountered in past surveys, and we believe that it substantially eliminates many of these difficulties.

Probability, 1980 Frame

1980 National Sampling Frame

The 1980 frame was designed, selected, and listed jointly by NORC and the Survey Research Center. This frame and subsequent frames cover the 50 states, not just the continental United States. The new frame was selected, in most cases, in two stages; about one-fifth of the second stage units were subsampled, producing a third stage.

Eighty-four PSUs were selected at the first stage. The PSUs consist of counties, SMSAs, independent cities and, in New England, parts of counties. Prior to selection, the United States was divided into PSUs; the PSUs were then grouped into 84 strata. The strata were formed by grouping metropolitan and non-metropolitan PSUs within each of the four Census regions. Within each region, additional variables were used to define strata. The stratifying variables included within-region geography and size; size was measured by the 1980 Census count of occupied housing units. One PSU was selected from each stratum using a controlled selection procedure. This procedure ensured proportionate representation along certain control dimensions (such as percentage Hispanic in the West). The exact control variables (like the stratification variables) differed somewhat from region to region. Sixteen strata contained only one PSU, which was selected with certainty. The remaining 68 PSUs were selected with probability proportional to size (measured in housing units).

The unit for second stage selection was the block or enumeration district (ED). The number of secondary selections within a PSU depended in part on the stratum size. The number of second stage selections listed for NORC's national frame in the 16 PSUs selected with certainty ranged from 24 to six selections for PSU. In the remaining 68 sample PSUs, six second stage selections were listed. (The same number of second stage selections were listed for SRC's national frame; further, both organizations retained a similar

⁷The selection methods used are similar to those described in standard textbooks, e.g., W. E. Deming, *Sample Design in Business Research* (New York: Wiley & Sons, 1960), and L. Kish, *Survey Sampling* (New York: Wiley & Sons, 1965).

⁸In the actual implementation of the selection method, subsamples 1 and 4 resulted in 51 PSUs, whereas subsamples 2 and 3 produced only 50 PSUs. The result was not unexpected and is due to a technical reason, details of which will be provided on request. The inequality of subsample sizes does not affect the equal probability characteristics of the sample.

number of second stage selections as a reserve for future use.) All total, the new frame includes 562 secondary selections.

Prior to selection, the second stage units within each sample PSU were sorted by county, by minor civil division (in some areas), by Census Tract or ED number, and by block number. Counties were ordered within PSUs according to size and geography (e.g., in SMSAs, the county containing the central city came first, then counties containing nearby suburbs, and so on). In twenty states, information was available on the size and median family income of minor civil divisions (MCDs), which are governmental units below the county level (such as cities or towns). Where this information was available, we sorted the block and EDs by MCD and ordered the MCDs by size and income.

Next, we sorted all blocks and EDs by Census Tract number and then by block or ED number; these sorts establish a geographic ordering. The secondary selections were made using systematic zone selection; the probabilities of selection were proportional to size (measured in housing units). Each secondary selection included at least 50 housing units.

In enumeration districts and blocks with a large number of dwelling units, a third stage of selection was carried out. The block or ED was subdivided into pieces which were "field counted" by field staff from NORC or SRC. In a field count, an area is scouted and a rough count of the number of housing units is made. Based on the field count we selected a piece of the sample block or ED with probability proportional to its size.⁹

Comparison of the 1970 and 1980 Frames

Table A.1 summarizes the main differences between the old and the new frames. Aside from the obvious differences in the number of selections at each stage and in the measures of size (people vs housing), the two frames differ in three main respects.

Table A.1: Main Differences Between Frames

<u>First Stage</u>	<u>1970 Frame</u>	<u>1980 Frame</u>
Number of Selections	100	84
Measure of Size	Persons--at least 10,000	Housing--at least 4,000 units

<u>Second Stage</u>		
Number of Selections	1800 (18 per PSU)	562
Unit	BG or ED	Block or ED
Measure of Size	Person	Housing units--at least 50
Method of Selection	Systematic Zone Selection	Systematic Zone Selection
Stratification	(Implicit) income, % Black	(Implicit) County: size, geography; MCD (20 states): income, size; CT, ED block: geography
<u>Third Stage</u>		
Unit	"Segment"	Part of a block or ED (in most areas, no 3rd stage)
Measure of Size	Housing units--at least 100	Housing units--at least 50
Method of Selection	One selection with probability proportional to size	One selection with probability proportional to size

First, the stratification variables differ. In particular, percentage Black, which was used as an implicit stratifier at the first and second stages in the old frame is no longer used in the new sample (except in rural areas of the Deep South). Instead, the new frame uses a variety of geographic control variables at both the first and second stages. Second, the new frame was, for the most part, selected in two rather than three stages. A third stage was used only to subsample within blocks and EDs too large to be listed in a single trip to the field.

⁹Steven G. Heeringa and Judith H. Connor, *The 1980 SRC/NORC National Sample Design and Development*. Ann Arbor: Institute for Social Research, 1984.

The most important change involves the method of selection at the first stage. The new frame used a controlled selection procedure that assures proportionate representation along the control dimensions as well as the dimensions used to define strata. This procedure should yield additional statistical precision (Leslie Kish estimates the gains at up to 20%). An added benefit of controlled selection from explicit strata is that it allows us to use the Keyfitz procedure to draw a new national sample. The Keyfitz procedure is a method for updating national samples using new Census data; it maximizes the retention of PSUs from an existing national sample. It could not be easily applied to a sample drawn using systematic selection procedures (such as the old frame). The controlled selection procedure used to select the PSUs has one drawback--it will be more difficult to subsample PSUs. The zone selection procedure used to select the old frame is easy to select a half-sample; in fact, the old frame was selected in two replicates. Subsampling is not such an automatic procedure with the new frame.

1983 GSS Sample: Fifty PSUs from the new frame were selected for the 1983 GSS. All 16 certainty PSUs were selected for the GSS subsample. The remaining 68 PSUs were paired, according to size and region; one PSU was selected at random from each pair. Within each of the 50 subsample PSUs, half of the segments (a total of 141) were selected systematically for the 1983 GSS. Fifty PSUs were also selected from the old frame with three segments per PSU (total of 150).

1982 Black Oversamples

In 1982 the National Science Foundation funded as a separate project an oversample of Blacks on the GSS. Two different sample frames were used. First, an additional sample of lines was drawn from the 1970 sample frame (as the regular 1982 GSS cross section was). These households were screened for race and eventually yielded 107 extra Black respondents. Second, a special sample frame designed to sample Blacks was drawn from 1980 Census data. In this sample frame localities were selected according to their Black population rather than their total population. This procedure increases the take-rate among selected lines yielding a more efficient sampling of Blacks. This oversample proportionate to the Black population resulted in 247 extra Black respondents. In all, the Black samples added 354 extra Black respondents. When added to the 156 Blacks who were part of the regular cross section, that made a total of 510 Black respondents in 1982.

The three groups of Blacks can be added together to form a national probability sample of Black Americans. The Blacks and Non-Blacks in the regular 1982 cross-section can be used as a national sample of all races without using the OVERSAMP weight. If one wants to use all 1982 cases to form a national sample (the 1,506 from the cross section and the black oversamples of 354) then the OVERSAMP weight must be used to establish the proper racial balance. The OVERSAMP variable is designed to match the racial distribution found in the regular cross section and to reproduce the total number of unweighted cases (i.e. $1,506 + 354 = 1,860$).

For a report on the black oversamples including a comparison of the two methods of oversampling blacks, see Roger Tourangeau and A. Wade Smith, "Finding Subgroups for Surveys," Public Opinion Quarterly, 49 (Fall, 1985), 351-365.

Information on response rates is given in Table A.8.

1987 Black Oversample

In 1987 the National Science Foundation funded as a separate project an oversample of Blacks on the GSS. An additional sample of lines was drawn from the 1980 sample frame (as the regular 1987 GSS cross section was). These households were screened for race and eventually yielded 353 extra Black respondents. When added to the 191 Blacks who were part of the regular cross section that made a total of 544 Black respondents in 1987.

1990 National Sample

Like its predecessor, the 1990 National Sample was selected in two major stages, with PSUs consisting of one or more counties selected at the first stage and segments consisting of one or more blocks selected at the second. In a few cases, segments were subsampled, a procedure that constituted a third stage of sample selection.

The 1990 sample included 100 first stage selections. The PSUs consisted of metropolitan areas or nonmetropolitan counties. The metropolitan PSUs include metropolitan areas of all three types distinguished in the 1990 Census--Metropolitan Statistical Areas (or MSAs, which correspond to the SMSAs used in 1980), Consolidated Metropolitan Statistical Areas (or CMSAs, which join metropolitan area of a very large city with the adjacent metropolitan area of one of its suburbs), and New England County Metropolitan Areas (or NECMAs, which are the whole county counterparts of the New England MSAs). Prior to selection, the United States was divided into 2,489 PSUs; the PSUs were then sorted into strata. The major strata again grouped metropolitan and nonmetropolitan PSUs within each of the four Census regions. The nonmetropolitan PSUs were further sorted by state; then, within state, by percent minority; and, finally, within percent minority groupings, by per capita income. Each PSU was classified according to the percent of its population who are minority group members; this encompassed everyone but non-Hispanic Whites. Percent minority groupings were formed by classifying each PSU according to percent minority quartiles within its major strata. The metropolitan PSUs were sorted by Census division, minority quartile, and per capita income. The sample PSUs were selected using systematic selection, with the selection probability for a PSU proportional to the number of housing units. This selection procedure ensured

proportionate representation along each of the sort variables. Nineteen PSUs were so large that they had to be included in the sample with certainty.

The second stage sampling unit in the 1990 National Sample was again the segment, consisting of one or more adjoining blocks. The number of segments selected within a PSU again depended on the whether the PSU was a certainty selection. From three to 26 segments were selected in the 19 certainty PSUs; in each of the remaining 81 sample PSUs, three segments were selected. All told, the 1990 National Sample includes 384 second stage selections. Prior to selection, the segments within each sample PSU were sorted successively by a) whether they were within the central city of a metropolitan area or outside of it (in metropolitan PSUs), b) state (in those PSUs that crossed state lines), c) county, d) place, e) percent minority quartile within the PSU, and f) census tract (CT) or block numbering area (BNA). The sample segments were selected using systematic sampling with probability proportional to size (in housing units). Undersized blocks were linked to adjacent ones to assure that each segment included at least 50 housing units. Similarly, census tracts with fewer than 50 housing units were linked with adjoining CTs.

In the smallest PSUs, it was possible for a segment to be selected more than once. In such cases and when segments included unexpectedly large numbers of dwellings, a third stage of sampling was carried out. The segment was subdivided into pieces by a field count; based on the field count, one piece of the segment was selected with probability proportional to its estimated size.¹⁰

Method of Selection	One selection per segment with probability proportional to size	One selection per segment with probability proportional to size

Note: In both samples, the third stage was generally not needed in most areas.

However, there are a number of differences between the two samples, most of them minor. At the first stage of sampling, the 1990 National Sample included more selections than the 1980 Sample (100 vs. 84), and it used a systematic rather than a controlled procedure to make the selections. The two sampling methods do not differ markedly; they have similar theoretical properties (e.g., both allow additional control beyond that afforded by ordinary stratified sampling) and yield similar results in practice. The systematic procedure makes it somewhat easier to select subsamples from the 1990 National Sample.

At the second stage of selection, the two samples again differ in their sample sizes (384 selections in 1990 vs. 562 in 1980) but the same method of selection was used. There was a small change in how the second stage units were defined. By 1990, the Census Bureau had divided the entire nation into blocks and no longer used Enumeration Districts; segments in the new sample could

thus be defined exclusively in terms of blocks. At both of the first two stages of sample selection, the 1990 National Sample classified the sampling units by their minority population; the earlier sample had not made such extensive use of this variable

1993 GSS Sample

1980 National Sample. For the 1993 GSS, approximately 1,100 housing units were selected from the 1980 National Sample. These dwelling units were clustered within 141 segments in 50 of the sample PSUs. Within each of the 16 certainty PSUs, approximately one-fourth of the sample segments were selected for the 1993 GSS, yielding a total of 39 segments. Within the remaining 68 sample PSUs, a subsample of 34 PSUs was first selected; then, within each of these 34 PSUs, three segments (out of the six available) were included in the 1993 GSS. Overall, then, the 1993 GSS sample included approximately one segment in four from the 1980 National Sample—one-fourth within the 16 certainty PSUs plus one-half of the segments within a randomly selected half of the 68 remaining sample PSUs. The subsampling of the noncertainty PSUs was carried out by pairing PSUs from similar strata; one PSU was selected randomly from each pair. The subsampling of segments was done using a simple systematic selection procedure.

1990 National Sample. The new National Sample also contributed approximately 1,100 housing units to the 1993 GSS sample. These were drawn from 191 segments in 68 of the sample PSUs. Within each of the 19 certainty PSUs, approximately one-half of the sample segments—a total of 71—were selected for the 1993 GSS. Within the remaining 81 sample PSUs, a subsample of 40 PSUs was first selected; within each of these 40 PSUs, all three available segments were sampled for the 1993 GSS. About half of the segments from the 1990 National Sample—one-half of the segments within the 19 certainty PSUs and all of the segments within a random half of the 81 other PSUs—were included in the 1993 GSS sample. The subsampling of the noncertainty PSUs was carried out by pairing PSUs that were nearest neighbors in the final sorted file from which the first stage selections were made; one PSU was selected at random from each pair. The last PSU of the 81 noncertainty PSUs could not be paired with another sample PSU; a random procedure was used to determine whether it would be included in the 1993 GSS sample. Segments in the certainty PSUs were subsampled using a simple systematic selection procedure.

The 1994-2004 surveys are sub-divided into two: samples A and B. Sample A consists of versions 1-6 in 1994 and versions 4-6 in 1996, 1998, and 2000. Sample B consists of version 6-9 in 1994 and versions 4-6 in 1996, 1998, and 2000. Both samples contain approximately half of the cases.

For a comparison of results from the two sample frames, see Tom W. Smith, Hee-Choon Shin, and Xiaoxi Tong, "A Report on the Sample Frame Comparisons and Design Effects of the 1993 General Social Survey," GSS Methodological Report No. 87, 1994.

2004 GSS National Sample Design

NORC has introduced an innovative approach to demographic sampling frame construction and sample design for NORC's program of face-to-face surveys from 2004 onwards.¹¹ The important changes from previous GSS designs are: (i) the construction of a new list-assisted sampling frame for 72% of the population; (ii) an increase in the size of the certainty stratum (the proportion of the population covered by certainty area selections); (iii) designation of new primary sampling units (PSUs) for the certainty stratum; (iv) designation of new secondary sampling units (SSUs) for the remaining "urban" areas; and (v) designation of larger SSUs for the remaining areas.

Considerations of cost and feasibility have determined that essentially all national sample designs worldwide are multi-stage samples with administrative/political areas as the primary sampling units. We denote these areas as national frame areas (NFAs). The skewness of the distribution of the sizes of administrative area units typically leads to the definition of the largest of these area units as certainty selections; these areas appear in the sample with certainty. These selections are sometimes called "self-representing PSUs" whereas they are in fact separate sub-strata; the nomenclature has led to some confusion in the literature and in the perception of the characteristics of national samples. The traditional area-probability design also includes stratification of the area units at the various stages of selection, incorporating our prior knowledge of the population structure into the design.

The absence of any satisfactory population register in the USA has led to the use of one or more stages of area sampling followed by listing of addresses/housing units in the selected ultimate area units [UAUs]¹². This approach characterizes both the sample designs from the Census Bureau and those from the major social research centers such as the University of Chicago's NORC and the University of Michigan's Institute for Social Research (ISR).

The confluence of three developments in recent years in the US has made it possible to re-assess this traditional approach to sample design.

¹¹ A more complete presentation of the approach may be found in O'Muircheartaigh, Colm, (2003) "There and Back Again: Demographic Survey Sampling in the 21st Century" Keynote Address, Federal Committee on Statistical Methodology 2003 Conference. <http://www.fcsm.gov/events/papers2003.html>

¹² The UAU is the unit used at the final stage of selection involving areas for each part of the population. Beyond this stage, the sampling unit is the housing unit (HU).

- First, it has become possible to obtain access (for sampling purposes) to the frame of addresses constructed and maintained by the United States Postal Service (USPS). Research at NORC has established that this frame is generally superior to the listings obtained from traditional field listing methods.¹³
- Second, it is possible to obtain data that allow for census geographies (based on blocks or combinations of blocks) to be classified into two categories – those blocks that have street-style addresses, and those that do not. The classification is based on the U.S. Census Bureau Type of Enumeration (TEA) code that was used to classify blocks as suitable for mail-out/mail-back data collection in Census 2000.
- Third, the quality of the maps based on TIGER has improved dramatically, and mapping software and databases have been developed that permit the accurate geocoding of almost all those street-style addresses.

The MSA/county is the basic frame area in Table A.3. Frame areas were first categorized according to population and list quality as follows:

- the largest MSAs/counties (certainty areas) with high density population dominated by tracts with street-style addresses (category 1);
- small counties with either less than 30,000 population or less than 15,000 population in tracts with street-style addresses (category 3);
- all other counties/MSAs (category 2).

Table A.3 describes the population.

Category	Units	Description	Extent
1	MSAs	The largest MSAs, likely certainty selections	45% of housing units (HUs) in 4.5% of the area
2	MSAs/counties	Intermediate MSAs not included in categories 1 and 2	40% of HUs in 25% of area
3	Counties	Counties with less than 30% of housing units or with fewer than 15,000 people living in type A tracts	15% of HUs in 70% of area

The shortcoming of this classification is that within all three categories of areas, urban areas (i.e. those with street-style addresses) are interspersed with rural areas (those with non-street-style addresses). Tracts with predominantly street-style addresses are designated type A tracts¹⁴; all other tracts are designated type B. Figures 1 through 4 show the partitioning of areas into type A and type B tracts. Figures 1 and 2 show the Los Angeles MSA and the Chicago MSA with type A tracts (dark) and type B tracts (pale); these are category 1 MSAs. Figures 3 and 4 show two category 2 MSAs: the Champaign/Urbana category 2 MSA in Illinois (Figure 3), and the Worcester category 2 MSA in Massachusetts (Figure 4).

Cost and timeliness are two major concerns in sample design. Consider the two extreme situations. In case I, a high quality list of addresses/HUs exists for every area unit in the population; in case II, there are no address lists. In case II, the sample of areas must be designed and selected well in advance of the survey to leave time for field listing of HUs in the selected areas. In case I, the sample of areas can be selected very close to the time of the survey fieldwork. The cost of listing in case II will be very large, making it impossible for many projects to support it; as a result the cost of listing will need to be amortized over a number of projects, implying that the design of the sample of areas must be sufficiently general to be appropriate for a wide range of surveys. The design can thus not be tailored to the particular survey. In those terms the US population frame is a mixture. For part of the population there is a list frame; for the rest, there is not. And the two parts are intermingled in a complex way.

The design solution is to partition the frame into two parts, in one of which HUs/addresses can be selected directly from the list; in the second part field listing must be carried out in the selected sample areas. The distinctive feature of the design is that the two parts are not constructed from spatially connected areas, thereby giving the frame a somewhat mottled appearance.

For category 1 type MSAs, type A tracts dominate. The design solution for category 1 is to remove the type B tracts from the category 1 MSAs. Stratum 1 is defined as those parts of category 1 MSAs that consist of type A tracts. Stratum 1 includes more than 90% of the population of category 1, but less than 50% of the area. The residual areas are treated separately (see discussion of stratum 3.2 below).

¹³See O’Muirheartaigh, Colm, Stephanie Eckman, Ned English, and Catherine Haggerty, (2004) “Sampling for Inner-City Face-to-Face Surveys” *2003 Proceedings of the Section on Survey Research Methods of the American Statistical Association* and O’Muirheartaigh, Colm, Stephanie Eckman, and Charlene Weiss (2003) “Traditional and Enhanced Field Listing for Probability Sampling” *2002 Proceedings of the Section on Survey Research Methods of the American Statistical Association*.

¹⁴Type A tracts are tracts in which at least 95% of the housing units (HUs) are in blocks designated with TEA code 1 – suitable for mail-out/mail-back data collection in Census 2000.

The composition of MSAs in category 2 is less extreme, in that there is a more even distribution of type A and type B tracts. Consider again figure 3, Urbana/Champaign. This MSA is divided into two NFAs. The first consists of the areas centered on Urban and Champaign, shaded dark in the figure. These are the type A tracts in the MSA. The pale tracts constitute a separate NFA. Stratum 2 is defined as the set of type A NFAs from category 2 MSAs; the dark areas in Figures 3 and 4 are examples. These stratum 2 NFAs include 75% of the population of category 2, but only 20% of the area.

In category 3, the problem arises in reverse; though the dominant type of tract is type B, there are type A tracts interspersed among them. However, though category 3 NFAs also contain both type A and type B tracts, the size of these MSA/counties is insufficient to warrant subdivision.

Stratum 3 comprises those parts of the population where in general the USPS address list is inadequate for use as a sampling frame. This stratum has two substrata. Stratum 3.1 contains, as NFAs: (i) the type B parts of category 2 MSAs – thus, for example, the type B tracts in Champaign/Urbana constitute an NFA; and (ii) the category 3 NFAs. These are the primary sampling units for stratum 3.1. Once the PSUs have been selected, segments are constructed within the selected NFAs as they have been for previous national samples, and a field listing is carried out in the selected segments.

Stratum 3.2 comprises the type B tracts in category 1 NFAs. The pale areas in figures 1 and 2 are examples of stratum 3.2 areas. All of these NFAs appear with certainty in the sample, and fieldwork will be conducted throughout these NFAs. Consequently it is not necessary to introduce an extra stage of sampling for this part of the population. In stratum 3.2, segments are selected directly into the sample, and field listing is carried out as with the stratum 3.1 segments. Thus, the PSU in stratum 3.2 is the segment. See Table A.4.

The important changes from previous GSS designs are:

- A new list-assisted sampling frame has been constructed for 72% of the population; this frame will permit re-design and retargeting of the sample for each successive GSS. While the same sample design, and the same selected area sampling units, can be kept for 2006 and beyond, the design and selection could be revisited for each successive GSS without major cost implications. Stratification and measures of size, for instance, could be adjusted based on information from the American Community Survey.
- The size of the certainty stratum (the proportion of the population covered by certainty area selections) has been increased. Almost half (45%) of the HUs in the population are now included in this stratum.
- Within the certainty stratum, new primary sampling units (PSUs) are being used. The PSU is now the tract (for the list-assisted part of the population). Tracts contain about 1000-2000 HUs and therefore can be expected to have considerably lower intracluster correlation coefficients (ρ) than the blocks/block groups (minimum size 75 HUs) that were used for previous designs.
- In the second “urban” stratum, the new secondary sampling units (SSUs) are tracts rather than blocks/block groups; this should lead to similar efficiency gains to those indicated above for the certainty stratum.
- In the “rural” stratum, the minimum size of SSU has been increased from 75 to 300 HUs; this should lead to smaller intracluster correlation coefficients, ρ .

2010 National Sample Design

The 2010 NORC National Sample Design is an update and expansion to the 2000 NORC National Sample Design. Whereas the 2000 NORC National Sample Design has 79 first-stage selections (called NFAs or PSUs in previous designs), including 24 self-representing areas large enough to be selected with certainty, the 2010 NORC National Sample Design has 126 first-stage selections, including 38 self-representing areas. In the 2000 NORC National Sample Design, each non-certainty first-stage selection represents 1% of the U.S. population, while in the 2010 NORC National Sample Design, each non-certainty first-stage selection represents 0.5% of the U.S. population. However, this is too many first-stage selections for GSS. Therefore, GSS uses a subset of 76 first-stage selections comparable to the 2000 National Sample Design's 79 first-stage selections.

The 2010 NORC National Sample Design also contains 1,516 second-stage selections (segments) compared to 899 for the 2000 NORC National Sample Design. The GSS will continue to generally use a subset of 400 second-stage selections. Just as in the 2000 National Sample Design, the GSS second-stage units will be a subsample of the larger set of National Sample Design second-stage units, which will allow segments to be rotated in and out throughout the decade just as was done for the 2000 National Sample Design.

Some slight changes to the 2010 National Sample Design were made, though the general outline was the same. The basic building blocks to make first-stage units in the sampling frame are again counties and metropolitan areas defined by OMB; the metropolitan areas are now called Consolidated Statistical Areas (CSAs) or Core Based Statistical Areas (CBSAs). First, counties, CBSAs, and CSAs that had a population less than 10,000 were combined with a neighboring non-certainty county, CBSA, or CSA (the closest geographically, regardless of size) to make first-stage units in the frame.

First-stage units in the frame were then categorized according to population and list quality as follows:

- the largest CSAs (certainty areas) with a population of at least 1,543,728 (0.5 percent of the 2010 Census U.S. population) were placed in category 1; these areas have a high population density, and are dominated by tracts with street-style addresses;
- small counties and CBSAs with less than 8 tracts that are predominantly street-style addresses (category 3);
- all other counties, CBSAs, and CSAs with at least 8 tracts that are predominantly street-style addresses (category 2).

Rural Alaska Boroughs and Census Areas with less than 0.180 housing units per square miles and at least 5,000 square miles in area were excluded. This dropped 0.03 percent of the U.S. population (12.9 percent of Alaska's population)

As was done in the 2000 National Sample Design, the Category 2 first-stage units are partitioned into two separate first-stage units; a first-stage unit consisting of the tracts where HUs/addresses will be selected directly from a postal delivery sequence file

(DSF) is placed in Category 2A while another first-stage unit where listing will be needed is placed in Category 2B. Once again, the Category 2B and 3 first-stage selections will be selected together.

GSS uses only 76 out of the 126 2010 National Sample Design first-stage units. Only half of the non-certainty (Categories 2A, 2B, and 3) were selected. Similarly, the probabilities of selection for the certainty Category 1 first-stage units are cut in half. For 17, they are still selected with certainty, but selecting the remaining 21 with probabilities proportional to size results in 15 out of the 21 being selected (for a total of 32 Category 1 selections).

Table A.6 Summary of the First-Stage Units for the 2010 National Sample Design

NFA Category	Description	Share of U.S. population	National Frame	GSS
1	The largest CSAs, certainty selections	56%	38	32
2A	DSF portions (8 or more tracts)	30%	60	30
2B	Tracts where listing is needed	5%	28	14
3	Counties/CBSAs with less than 8 urban tracts	9%		
TOTAL		100%	126	76

Just as in the 2000 National Sample Design, the frame was partitioned into two parts for the selection of the second-stage units (segments). If DSF use was expected to be possible, tracts were selected. Where listing was expected to be required, block groups were selected. In both cases, the minimum size for a sample unit (whether tract or block group) was 300. Units not meeting this minimum size were merged with a neighbor.

In Category 1 first-stage selections, type A tracts were selected separately from block groups in type B tracts. Within category 1, 16 segments were selected per 1 percent of the population covered = $16 * 56\% = 896$ segments. The proper proportion of type B segments is 32, so 864 type A tracts and 32 block-groups within type B tracts were selected. GSS uses a standard of 4 segments per 1 percent of the population covered, so GSS will use approximately 216 type A tracts and 8 block-groups within type B tracts.

For category 2A first-stage selections, 8 segments per first-stage selection results in 480 segments in the 2010 National Sample Design, but GSS uses 120 (half of the selections in half of the first-stage selections) of them.

For category 2B/3 first-stage selections, the 2010 National Sample Design only selected 5 segments per first-stage selection, but GSS uses 4 in half of them for a total of 56 segments.

Table A7 Summary of the Second-Stage Units for the 2010 National Sample Design

Category	Expected Type of Address Listing	First-stage selections	Sample Segments	GSS First-Stage Selections	GSS Sample Segments
1	City Style Address	--	864	--	216
	Rural	--	32	--	8
2a	City Style Address	60	480	30	120
2b/3	Rural	28	140	14	56
Total			1,516		400

The 2000 NORC National Sample Design used the DSF or listing strictly based on Census enumeration methods, which corresponded to whether the DSF was usable. However, we have strengthened the criteria. We have compared the number of units in the DSF to the number of occupied housing units in the Census. If the ratio of DSF to occupied housing units was less than 0.9 or greater than 1.25, we examined whether DSF geocoding errors could be corrected or not. If not, we selected one block group with probability proportional to the number of housing units for listing. Before adding this segment to the listing work, we checked to see if the DSF was adequate for this block group. Only if the DSF was inadequate for this block group was the block group listed. Out of 1,344 tracts, 37 (2.8 percent) were listed.

Similarly, we checked the DSF for block groups that were expected to be listed. While the DSF was inadequate for the tracts these block groups were in, we determined the DSF to be adequate for 84 out of the 172 (48.8 percent) block groups selected. Therefore, the 2010 NORC National Sample Design listed 125 out of the 1,516 (8.2 percent) second-stage units selected.

NON-RESPONSIVE SUB-SAMPLING

The basic concept is to subsample the nonrespondents, adjusting the weights to keep the design unbiased. The subsample is weighted up to represent all nonrespondents as of the cutoff date. Subsampling allows the focusing of resources on a smaller set of the difficult cases for further attempts, thereby potentially reducing both response error and nonresponse bias.

The subsampling of nonrespondents constitutes a two-phase design, or a double-sampling scheme, that was first introduced by Hansen and Hurwitz in 1946.²⁰ The subsampling of nonrespondents has been used in many other surveys, such as the Census Bureau's American Community Survey and the Urban Institute's 1999 and 2002 National Survey of America's Families. At NORC, the double-sampling scheme has been used for the Chicago Health and Social Life Survey.

The typical pattern for area probability studies, such as GSS, is for a small percentage of the difficult cases to absorb much of the resources, especially near the end of the data collection period. Increasing the initial sample size boosts the number of less difficult cases available from the start. After the first pass, the remaining cases – those that are so much more difficult to complete, are subsampled. Considerable time and effort is spent on the subsampled cases, but since there are fewer of them, the overall field effort is reduced.

For the 2004 GSS at the end of the preliminary field period for release 1 after about ten weeks, there were 1440 out-of-scope cases (not housing units, vacant, etc.), 2162 completed cases, 143 partial cases and appointments, 144 final nonrespondents, and 2171 temporary nonrespondents. Temporary nonrespondents are originally sampled cases + missed dwelling units whose status is "pending" (i.e. they do not have a final status or outcome determined). They may ultimately be coded as out-of-scope, nonrespondents, or completed cases. The temporary nonrespondents were sampled at 50% and 1086 were retained in the study and 1085 were eliminated. The retained sub-sample cases and the partial/appointment cases were then pursued for approximately another 10 weeks. Ultimately 2812 cases were obtained.

For the 2006 GSS at the end of the preliminary field period for release 1 after about eleven weeks, there were 1490 out-of-scope cases (not housing units, vacant, etc.), 3418 completed cases, 283 partial cases and appointments, 259 final nonrespondents, and 4209 temporary nonrespondents. The temporary nonrespondents were sampled at 45% and 2068 were retained in the study and 2141 were eliminated. The retained sub-sample cases and the partial/appointment cases were then pursued for approximately another 10 weeks. Ultimately 4510 cases were obtained.

For the 2008 GSS at the end of the preliminary field period for release 1 after about ten weeks, there were 681 out-of-scope cases (not housing units, vacant, etc.), 1610 completed cases, 134 partial cases and appointments, 96 final nonrespondents, and 1738 temporary nonrespondents. The temporary nonrespondents were sampled at 41% and 713 were retained in the study and 1025 were eliminated. The retained sub-sample cases and the partial/appointment cases were then pursued for approximately another 10 weeks. Ultimately 2023 cases were obtained.

For the 2010 GSS at the end of the preliminary field period for release 1 after about ten weeks, there were 657 out-of-scope cases (not housing units, vacant, etc.), 1575 completed cases, 137 partial interviews/appointments/Spanish-language cases, 72 final nonrespondents, and 1695 temporary nonrespondents. The temporary nonrespondents were sampled at 47% and 800 were retained in the study and 895 were eliminated. The retained sub-sample cases and the partial/appointment/Spanish-language cases were then pursued. After approximately seven weeks, 137 of the 895 cases that were removed during sub-sampling were released back into the sample to be re-contacted for interviews. These 137 re-released cases, along with all other pending cases, were then pursued for about four more weeks. Ultimately 2044 cases were obtained.

For the 2012 GSS at the end of the preliminary field period for release 1 after about ten weeks, there were 492 out-of-scope cases (not housing units, vacant, etc.), 1395 completed cases, 167 partial interviews/appointments/Spanish-language/special situation cases, 56 final nonrespondents, and 2040 temporary nonrespondents. The temporary nonrespondents were sampled at 47% and 965 were retained in the study and 1075 were eliminated. The retained sub-sample cases and the partial/appointment/Spanish-language cases were then pursued. Ultimately 1974 cases were obtained.

For the 2014 GSS at the end of the preliminary field period for release 1 after about ten weeks, there were 764 out-of-scope cases (not housing units, vacant, etc.), 1523 completed cases, 269 partial interviews/appointments/Spanish-language/special situation cases, 110 final nonrespondents, and 2532 temporary nonrespondents. The temporary nonrespondents were sampled at 65% and 1653 were retained in the study and 879 were eliminated. The retained sub-sample cases and the partial/appointment/Spanish-language cases were then pursued. Ultimately 2538 cases were obtained.

For the 2016 GSS at the end of the preliminary field period for release 1 after about eleven weeks, there were 692 out-of-scope cases (not housing units, vacant, etc.), 1757 completed cases, 146 partial interviews/appointments/Spanish-language/special

situation cases, 90 final nonrespondents, and 3685 temporary nonrespondents. The temporary nonrespondents were sampled at 72.2% and 2660 were retained in the study, eliminating 1025. The retained sub-sample cases and the partial/appointment/Spanish-language cases were then pursued. Ultimately, 2867 cases were obtained.

For the 2018 GSS at the end of the preliminary field period for release 1 after about twelve weeks, there were 668 out-of-scope cases (not housing units, vacant, etc.), 1785 completed cases, 335 partial interviews/appointments/Spanish-language/special situation cases, 463 final nonrespondents, and 1949 temporary nonrespondents. The temporary nonrespondents were sampled at 54.8% and 1069 were retained in the study, eliminating 880. The retained sub-sample cases and the partial/appointment/Spanish-language cases were then pursued. Ultimately, 2348 cases were obtained.

Since temporary nonrespondents were subsampled at about 50%, they must essentially be given a weight of about 2 to make the sample representative. The weights that must be used for the 2004-2014 GSS are discussed below in the section on Weighting. In addition, the subsampling of nonrespondents also means that weighted figures must be used in calculating the response and other outcome rates. The procedure utilized is discussed in Standard Definitions: Final Disposition of Case Codes and Outcome Rates for Surveys. Lenexa, KS: American Association for Public Opinion Research, 2011. WEIGHTING

The GSS contains several weight variables (ADULTS, OVERSAMP, FORMWT, WTSSNR, WTSSALL) that users should use as needed as well as weight-related variables (ISSP+PHASE). This section briefly discusses these variables.

ADULTS

The full-probability GSS samples used since 1975 are designed to give each household an equal probability of inclusion in the sample. (Call this probability Ph.) Thus for household-level variables, the GSS sample is self-weighting. In those households which are selected, selection procedures within the household give each eligible individual equal probability of being interviewed. In a household with n eligible respondents, each has probability Ph of being in a selected household, and $1/n * Ph$ of actually being interviewed. Persons living in large households are less likely to be interviewed, because one and only one interview is completed at each preselected household. The simplest way to compensate would be to weight each interview proportionally to n, the number of eligible respondents in the household where the interview was conducted. N is the number of persons over 18 (ADULTS) in the household. A discussion of the weight as well and a post-stratification variant of weighting by ADULTS appears in GSS Methodological Report No. 3.²¹

OVERSAMP

As described in the previous section, the 1982 survey included an oversample of blacks. To make the 1982 survey a representative cross-section, the user can either exclude the black oversample cases by excluding codes 4 and 5 on SAMPLE or weight the file by OVERSAMP. To make the 1987 survey a representative cross-section the user can either exclude the black oversample by excluding code 7 on SAMPLE or weight the file by OVERSAMP. Users should adopt one of these procedures in all cases except when analyzing only blacks from the 1982 and/or 1987 cross-sections and oversamples.

FORMWT

Problems with form randomization procedures on the 1978, 1980, 1982-1985 surveys necessitate the use of FORMWT when variables appearing on only one form are analyzed. A complete list of form-related variables appears in Appendix P. Full details on the form randomization problem and of the weight created to correct for it appear in GSS Methodological Report No. 36.²²

ISSP

The International Social Survey Program supplement was administered to Form 1 cases in 1985 and as such must be weighted for FORMWT as discussed above. In addition because this was a self-administered supplement completed after the main GSS questionnaire there is supplement non-response. Users may wish to use the variable ISSP to study supplement non-response bias and perhaps develop a weight to compensate for same.²³

POST-STRATIFICATION

In general, the GSS samples closely resemble distributions reported in the Census and other authoritative sources. Because of survey non-response, sampling variation, and various other factors the GSS sample does deviate from known population figures for some variables. The GSS does not calculate any post-stratification weights to adjust for such differences. For relevant discussion of distributional variation caused by non-response and other factors see GSS Methodological Reports No. 3, 5, 9, 16, 21, 25, 79.²⁴

Differences from the Census and other changes in distributions due to alterations in sampling include the following:

1. In 1972 blacks were over-represented. The 1972 survey was the last to utilize the 1960 NORC sample frame and it is believed to have under covered rapidly growing suburban areas.
2. All full-probability samples under-represent males. This is discussed in GSS Methodological Report No. 9.
3. Block quota samples under-represented men in full-time employment, see GSS Methodological Report No. 7.
4. Coverage of Mormons increased significantly when the 1980 sample frame was adopted. This was due to the addition of a primary sampling unit in Utah. For more details see GSS Methodological Report No. 43.
5. People eighteen years old appear to be under-sampled although this is actually not the case. Age is assigned based on year of birth and the assumption that one's birthday has already occurred. However, to be in the sample one must have actually reached his/her eighteenth birthday and since the GSS is fielded in March every year only about one-quarter of those born eighteen years prior to the current year have reached majority by the interview dates. Thus nineteen year olds as classified on the GSS consist of approximately one-quarter who have turned nineteen since the first of the year and three-quarters who will turn nineteen by the end of the calendar year. The same is true for ages 20 and up. For eighteen year olds on the GSS only those who have turned eighteen since the first of the year are included. Thus the number of eighteen year olds in the GSS is approximately one-quarter the number of nineteen year olds (See Appendix E). The "missing" eighteen year olds are not under-represented in the sample, but are merely counted as nineteen year olds.

Weights for 2004+ GSS²⁵

Due to the adoption of the non-respondent, sub-sampling design described above, a weight must be employed when using the 2004+ GSSs. One possibility is to use the variable PHASE and weight by it so that the sub-sampled cases were properly represented. If one wanted to maintain the original sample size, one would weight by $PHASE * 0.86258$ in 2004 and $PHASE * .80853$ in 2006, etc. This weight would only apply to 2004+ and would not take into account the number of adults weight discussed above. As such, it would be appropriate for generalizing to households and not to adults. A second possibility is to use the variable WTSS. This variable takes into consideration a) the sub-sampling of non-respondents, and b) the number of adults in the household. It also essentially maintains the original sample size. In years prior to 2004+ a one is assigned to all cases so they are effectively unweighted. To adjust for number of adults in years prior to 2004, a number of adults weight would need to be utilized as described above. WTSSALL takes WTSS and applies an adult weight to years before 2004. A third possibility is to use the variable WTSSNR. It is similar to WTSS, but adds in an area non-response adjustment. Thus, this variable takes into consideration a) the sub-sampling of non-respondents, b) the number of adults in the household, and c) differential non-response across areas. It also essentially maintains the original sample size. As with WTSS, WTSSNR has a value of one assigned to all pre-2004 cases and as such they are effectively unweighted. Number of adults can be utilized to make this adjustment for years prior to 2004, but no area non-response adjustment is possible prior to 2004. Details on the construction of WTSS and WTSSNR follow:

W0: Within each NFA, we calculate a probability of selection, n/N . W0 is the reciprocal of this probability of selection (N/n). At this point, each observation stands in for a given number of cases in the frame. Because the secondary sample release was only in the urban NFAs, cases in urban NFAs have a slightly higher probability of selection, and thus a slightly lower baseweight, than cases in the urban NFAs.

$\sum W0 = \text{frame size}$

W1: At the end of Phase I of data collection, we subsampled the non-responding cases with a sampling fraction $f=.5$ in 2004. W1 for the selected non-responding cases is, for example, then $W0*(1/.5)$ in 2004 or for 2006 is $W0*(1/.45)$, etc. W1 is missing for the unselected non-responding cases. $W1=W0$ for cases which were not subsampled.

$\sum W1 = \text{frame size}$

W2: Next, we adjust the baseweight for eligibility. Not all cases in the frame are truly eligible for the survey: some addresses in our frame are businesses, do not exist or are unoccupied. We use the eligibility rate of the sampled cases to estimate the eligibility rate for the frame. We calculate the eligibility rate at the NFA level.

This adjustment sets the weights of the ineligible cases to missing. Cases whose eligibility could not be determined are given fractional eligibility equal to be eligibility rate for their NFA.

Now the sum of the weights is the estimated number of eligible cases (or occupied housing units) in the frame.

$\sum W2 = \text{estimated eligible cases in the frame} < \sum W1$

W2NR: For the non-response version of the weight only (WTSSNR), we adjust for non-response at this point. Weights for responding cases increase by the reciprocal of the response rate, calculated at the NFA level. The responding cases take on the additional weight of the non-responding cases. W2NR is missing for the non-response cases. The sum of the weights is the same as the previous step: the estimated number of eligible cases in the frame.

$\sum W2NR = \sum W2 = \text{estimated eligible cases in the frame}$

W3 (WTSS): To account for the random selection of an adult respondent, this weight is the household-level weight (W2) multiplied by the number of adults in the household. The sum of the weights in this step is the total number of adults in all eligible households in the frame.

$\sum W3 = \text{estimated adults in eligible cases in the frame} > \sum W2$

W3NR (WTSSNR): To account for the random selection of an adult respondent, this weight is the non-response adjusted household-level weight (W2NR) multiplied by the number of adults in the household. The sum of the weights in this step is the total number of adults in all eligible households in the frame.

$\sum W3NR = \text{estimated adults in eligible cases in the frame} > \sum W2NR$

WTSS: We then rescale W3 so that the sum is the total number of completed interviews. This adjustment helps prevent errors that arise in SPSS and in some procedures in SAS where the sum of the weights is assumed to be equal to the sample size. The relative weights are unchanged by this adjustment.

WTSSNR: We also rescale W3NR so that the sum is the total number of completed interviews. This adjustment helps prevent errors that can arise in SPSS and in some procedures in SAS where the sum of the weights is assumed to be equal to the sample size. The relative weights are unchanged by this adjustment.

$\sum WTSS = \sum WTSSNR = \text{number of completed interviews}$, but the WTSSNR adjusts for non-response at the NFA level while WTSS does not.

WTSSALL:

As mentioned above, WTSSALL takes WTSS and applies an adult weight to years before 2004. The weight value of WTSSALL is the same as WTSS for 2004 and after. Thus, researchers who use the GSS data before or after 2004 may consider using the WTSSALL weight variable.

Calculating Design-Corrected Standard Errors for the General Social Survey, 1975-2016

The General Social Survey (GSS) is an area-probability sample that uses the NORC National Sampling Frame for an equal-probability multi-stage cluster sample of housing units for the entire United States. Since the sample for the GSS is a cluster sample, standard errors are larger for the GSS than simple random sample calculations (calculated without correction for the design). To correctly calculate standard errors, design variables must be used in statistical software (such as SVY in STATA). Without these design variables, statistical software will assume a simple random sample and underestimate standard errors.

We then rescale W3 so that the sum is the total number of completed interviews. This adjustment helps prevent errors that can arise in SPSS and in some procedures in SAS where the sum of the weights is assumed to be equal to the sample size. The relative

weights are unchanged by this adjustment.

$\sum \text{WEIGHT} = \text{number of completed interviews}$

We provide two design variables for every GSS interview from 1975-2016: VSTRAT and VPSU. VSTRAT is the Variance STRATum while VPSU is the Variance Prietary Sampling Unit. The stratum and PSU reflect the first-stage and second-stage units selected as part of the NORC National Sampling Frame, and are unique to a particular round.

First stage units in the NORC National Sampling Frame are called National Frame Areas, (NFAs), each of which is composed of one or more counties (previous to the 2010 National Frame, NFAs were called PSUs). The largest urban areas are selected with certainty to guarantee their representation in NORC's National Sampling Frame (there were no certainty NFAs prior to 1983). Second-stage stage units in the NORC National Sampling Frame are called segments, each of which is either a block, a group of blocks, or an entire census tract. The first-stage and second-stage units are selected with probabilities proportional to size (in housing units), and the sample housing units (third-stage units) are then selected to be an equal-probability sample, which results in roughly the same number of housing units selected per second-stage sampling unit.

To create the variables VSTRAT and VPSU, we recode the NFAs and segments, depending on whether the NFA was selected with certainty. In certainty NFAs, segments are paired into strata with one segment assigned to VPSU = 1 while the other segment is assigned to VPSU = 2. Often, small segments are combined into one VPSU. Non-certainty NFAs are paired into strata with one NFA assigned to VPSU = 1 while the other NFA is assigned to VPSU = 2. It is rare, but possible, for NFAs to be combined in one VPSU. This strategy has been adapted from the National Longitudinal Survey of Youth, 1997 cohort strategy designed by Kirk Wolter.

Here is sample Stata code to analyze the variable ANALYSISVAR within a GSSDATAFILE with the weight variable WTVAR (either WTSSALL or WTSSNR):

```
use GSSDATAFILE.dta, clear
svyset vpsu [weight=WTVAR], strata (vstrat)
svy: proportion ANALYSISVAR // point estimates and design adjusted s.e.'s
svy: tabulate ANALYSISVAR, deff //deff
tab ANALYSISVAR [weight=round(WTVAR,1.0)] // Weighted frequency
```

Note that it is possible to combine multiple years of GSS data into one GSSDATAFILE. SPSS is menu-driven, so no code is given here, but you can create design-corrected standard errors within SPSS using the Complex Samples add-on.

TIME

If the merged GSS is thought of as designed to equally sample time, there are numerous deviations due to such factors as 1) sample size variation across surveys, 2) the absence of surveys in 1979, 1981, 1992, and in odd years after 1993, 3) experiments (See Appendix O), 4) switching of items from permanent to rotating status, 5) switching from across-survey rotation to sub-sample rotation, 6) late starting and terminated time series, or 7) some combination of these. For more information on these issues and possible adjustments see GSS Methodological Report No. 52.²⁶

APPENDIX B:

FIELD WORK AND INTERVIEWER SPECIFICATIONS

1972-2000

This study employed standard field procedures for national surveys, including interviewer hiring and training by area supervisors in interviewing locations when necessary. The sampling procedures were reviewed by having interviewers take a training quiz after they had studied the sampling instructions specific to this study (see Appendix A for a discussion of the sample). Around the same time, publicity materials were sent to area supervisors; these included letters to be mailed locally to the Chief of Police, the Better Business Bureau, the Chamber of Commerce, and the various news media.

After these steps were completed, interviewers received materials needed for data collection (assignments, specifications, blank interview schedules). Each interviewer completed one practice interview which was evaluated at NORC. Actual interviewing then commenced; completed interviews were immediately returned to NORC where they were edited for completeness and accuracy. Twenty percent of the interviews were validated. Feedback on specific problems was given to individual interviewers and on general problems to all interviewers.

Once field work was completed, the edited questionnaires were coded and keypunched, and the resulting data were cleaned (see Appendix C: General Coding Instructions).

The following section contains the interviewer specifications in one continuous listing. Originally, the specifications were communicated to interviewers by means of an annotated interview schedule and memoranda on specific interviewing problems. The specifications inform the interviewers of the intent of the question, provide caution signals where a potential problem may exist, and recommend probes or provide interpretations which can be suggested to the respondent should the respondent have difficulty in understanding the question. All the specifications work toward increasing the internal validity of the data collected.

Questions which had no specifications are not included in this section. If a specification or explanation modifies an entire question, the question is not repeated here. If a specification modifies one response category, or only one section of the question, the modified portion is repeated here and appears in brackets "[]."

Specifications from the most recent survey are given first. Earlier specifications are given next. Notes about additions, omissions, etc. refer to the immediately preceding entry. "None" means that no specification was used that year. Questions not listed below have never had specifications.

2002+

In 2002 the GSS switched to computer assisted Personal Interviewing (CAPI). There are no printed questionnaires, but the show-cards are still printed. Manual edits and keypunching are eliminated. Training now includes learning how to operate CAPI. Data validation and cleaning remains similar to pre-CAPI procedures described above.

Interviewer Specifications

1978, 80, 82, 83-91, 1993+

WRKSTAT Accept R's definition of working full time or part time. Do not define these terms for R. By "working" and "job" we mean: working for pay at a job, or running his/her [one's] own business or profession (or farm), or working without pay in [a] family farm or business.

[SMALLEST CODE NUMBER] Example: If R was working part time and also going to school, circle [code] "2."

1977, 82, 83

Adds [Other] example: "disabled."

1976

Adds "or 'too ill'" to last line.

1973-75

Let the R decide if R was working full or part time.

If R was working part time and was also going to school, circle code 2.

By job, we mean: working for pay at a job or running own business or profession (or farm), or working without pay in family business (or farm).

"Other" might be disabled or too ill to work.

1972

For example: If working full time and part time, code "1." If working part time and in school, code "2."

[other (SPECIFY AND ASK A)] For example: Might be disabled or too ill to work.

MARITAL [married] Include legal marriage or living together as married. Accept R's definition of "married." [separated] Includes informal as well as legal separation.

AGEWED If necessary, probe for approximate age: For example: "About how old were you?"

DIVORCE [legally] legal separation gained through a court.

WIDOWED [Widowed] refers to having a marriage terminated by the death of your current spouse. If one is divorced and the ex-spouse dies, you are (1994-98: not a widow.) not widowed.

1976-78, 80

MARITAL [Separated] Includes legal as well as informal separation. (1980, switches order of legal and informal)

AGEWED If necessary, probe for approximate age: "About how old were you . . . ?"

1975

AGEWED Probe for approximate age, if necessary. For example: "About how old ...?"

DIVORCE Here we only want legal separation gained through a court.

Self-employed people are those who:

- 1) work for profit or fees in their own unincorporated business, profession, or trade, or who operate a farm
- 2) are unpaid family workers who work without pay in a business or on a farm operated by a relative
- 3) work for their own incorporated business

Self-employed people include independent contractors and sub- contractors, free lance writers, many consultants, etc. A person is not self-employed if s/he runs or manages a branch of a bank/chain, is CEO in a publicly [SIC] held company, a real estate sales person as opposed to an independent broker, etc.

Probe for full description of occupation and industry. It is important to get the kind of business or industry, and to get it crystal clear. The name of the company or employer is not necessary and in most instances will not tell us what respondent actually does in his job. The kind of business or industry is crucial to our properly classifying the job. [1994: Probe for full description of occupation. If mother [96-2012: "just" mother] substitute had more than one kind of work while R was growing up, ask for work around the time R was 16 years old. If more than one job at a time, probe for the main job, i.e., Job at which person spent most hours.]

It is important that we have detailed information concerning the kind of business. A description such as "automobiles" is far from sufficient—this could mean an auto factory, a new car dealership, a used car lot, a car rental agency, a car wash, a car repair shop, an automobile importer, or something else. Probe fully using sub-questions A through E to find out exactly what kind of business or industry it is.

Respondents, of course, have no way of knowing that the classifying of occupations is very difficult and we need all the information we can get. It is your job to obtain the information. To give you an idea of the difficulty involved,

the Bureau of the Census [96: has listed more than 90] lists 91 different types of "laborers." How can we properly classify the respondent if all we have to go on is "laborer" as a job description? If you find out just what it is that he [82-91, 93: the person] does as a "laborer," then we can properly classify him [82-91, 93: him/her, 96: the person].

Don't be content with a job title. "Maintenance man [82-91, 93: person]" could mean a person [82-91, 93-2012: someone] who maintains large and complicated machinery, or a janitor, or something else. Find out what he [82-91, 93: he/she, 96: the person] does as a maintenance man [82-91, 93: person]. "Office work" can mean supervising typists, being a typist, being a file clerk, supervising the entire office, or something else. Find out what he [82-91, 93: he/she, 96: the person] does in the office.

"Farmer" is definitely not a good description. It is incomplete because the person may . . .

- own a farm,
- or rent a farm,
- or be a sharecropper (working on someone else's land for a share of the crop or a share of the value of the crop),
- or work without pay on his [82-91, 93: his/her] family's farm,
- or be a farm laborer for wages,
- or be a foreman on a farm.

When you receive the response "farmer," find out which of these possibilities applies to the person, so we can properly classify his [82-91, 93: his/her] occupation.

If father, or father substitute, had more than one kind of work while R. was growing up, ask for work around the time R. was 16 years old. If more than one job at [96: a] that time, probe for the [82: "the" omitted] main job, i.e., the [82-91, 93-2012: "the" omitted] job at which person spent most hours.

1973-75

If father or father substitute had more than one kind of work, ask for work around time R. was 16. If more than one at that time, probe for main job.

This occupation question has been slightly reformatted. As always, we need a complete description of occupation and industry. The order in which you get the information asked in A through D does not make any difference—the important thing is that it is all there.

It is important to get the kind of business or industry, and to get it crystal clear. The name of the company or employer is not necessary and in most instances will not tell us what the respondent actually does in his job. The kind of business or industry is crucial to our properly classifying the job.

It is important that we have detailed information concerning the kind of business. How can we properly classify the respondent if all we have to go on is "Laborer" as a job description? If you find out just what it is that he does as a "laborer," then we can properly classify him.

1972

Adds following at end:

Don't be content with a job title. "Maintenance man" could mean a person who maintains large and complicated machinery, or a janitor, or something else. Find out what he does as a maintenance man. "Office work" can mean supervising typists, being a typist, being a file clerk, supervising the entire office, or something else. Find out what he does in the office.

1977-78, 80, 82-91, 93-94, 98

[Code without asking only if there is no doubt in your mind] NOTE!

1976

Ask if you're not sure. See Census definition below: "A person should be classified as OTHER only if he is American Indian, Japanese, Chinese, Filipino, Asian Indian, Korean, Polynesian, Indonesian, Hawaiian, Aleut, or Eskimo. A person is classified as BLACK only if he is American Negro; or if he is African, West Indian, or Puerto Rican who appears to be black. All other persons are classified as WHITE. This includes Mexicans, Spaniards, and also Africans, West Indians, or Puerto Ricans who appear to be white."

1972-75

If there is no doubt as to R's race, code without asking. If you have any doubt, ASK.

Please study the following guidelines for classification of race, as derived from Census definitions. If, in the interview situation, you have any reason to be unsure of the respondent's race, according to the definitions given here, ask the question as printed in the questionnaire. Then record the response verbatim and circle the appropriate code and check the box provided.

Circle one code each for each item (RUSSIA, JAPAN, ENGLAND, CANADA, BRAZIL, CHINA). Circle code on same line as R's choice on the scale. For example: If R rates Israel "+1" circle code "05" in column B or if R rates Canada "+5" circle code "01" in column C.

1982, 83, 85(X)

Circle one code for each item (RUSSIA, JAPAN, ENGLAND, CANADA, BRAZIL, CHINA, ISRAEL, EGYPT). Circle code on same line as R's choice on the scale. For example: If R rates Brazil "+1" circle code "05" in column E or if R rates England "+5," circle code "01" in column C.

1985(Y)

Circle one code for each item (RUSSIA, JAPAN, ENGLAND, CANADA, BRAZIL, CHINA). Circle code on same line as R's choice on the scale.

1977

Circle the code opposite R's choice. EXAMPLE: R rates Brazil "+1," circle code 05 in column E.

1975

If R asks, "China" refers to Mainland, or Red China.

1974

Note that the 8 items (RUSSIA, JAPAN, ENGLAND, CANADA, BRAZIL, CHINA, ISRAEL, EGYPT) are broken into two groups of four. This was done just to make it easier for you to code responses without getting lost on the page.

1996, 98

RELIG

"Protestant" includes any post-Reformation Christian denominations—Mormons, Christian Scientists, Jehovah's Witnesses, etc. are all Protestants.

If Christian is mentioned in the lead-in, probe to see if this is a reference to a specific denomination. DON'T enter Christian as an "Other" (Code 5) unless R means he/she is a generic Christian with no denominational preference or membership.

For "Other" (Code 5) and in the "Other Specify" fields below under Protestant denominations, get as full and precise a name of the denomination as possible.

1994+

[Evangelical Lutheran Church of America and Presbyterian Church (U.S.A.)] These two churches both underwent restructuring. Probe for the name of the denomination prior to the merger. If the R knows which church his/her congregation used to belong to, then code the pre-merge code.

Code 70 should be used when the phrases "non-denominational" or "interdenominational" are mentioned. Other verbatims that might lead to a code 70 are: "Don't attend any church now," "No church in particular. I'm a generic Protestant," and "I go to lots of them." Also mentions of three or more specific denominations are mentioned, flag case for inspection.

1987, 88-91, 93-98

If R says "Christian" ask: Is that the Disciples of Christ? If "yes" or "no" record verbatim and do not code. Plus specs for 1972-1986. [1994: If R answers "yes" to the probe "Is that the Disciples of Christ," the verbatim should be written "Yes, it is the Disciples of Christ" instead of just "yes."]

1985-86, 1996+

If R reports Presbyterian Church, U.S.A. probe: "was your church originally Presbyterian Church in the United States or United Presbyterian Church in the United States." If R says "Don't know" to probe, record verbatim. Plus specs for 1977-1984. (In 2000-02: Probe for name of the denomination prior to the merger).

1976

If R says "lots" or "dozens," probe: "Well, about how many would you say?"

1972, 74, 75

Probe if necessary: "For most people. . ." Use the code [seven or more] only if a number is given (seven or larger number) not for vague responses like "dozens" or "lots." Probe such vague responses: "Well, about how many would you say?"

Probe once before accepting the response [as many as you want].

1978, 82, 83, 85, 86, 88-91, 93-94

CHLDMORE If R has no children, ask: "Do you expect to have any children?"

If R is currently pregnant, code "yes" without asking and ask **A & B**:

A. "How many more children do you expect to have?"

B. "How many more in the next five years?" (B omitted since 1982).

Include MALE Rs.

If R is elderly and comments that the question is inappropriate, just explain that you are instructed to ask the question of everyone.

1977

If R has no children, ask: "Do you expect to have any children?"

If R is currently pregnant, code "yes" without asking, and ASK A and B, "How many more children do you expect to have?" and "How many more in the next five years?"

1972, 74, 75, 76

You may not want to ask this [question] of a 70 year old widow, but do ask of everyone who could possibly have children in the future—regardless of sex or marital status.

If your R is an obviously pregnant [woman], [you may] code yes without asking; [then] ask A and B.

Use the word [more] if R has ever had children.

1974, 75, 77, 82, 83, 94

[Volunteers, Don't Know] Go to DRAFTCOL

[Should, Should not, Don't Know] Go to DRAFTCOL.

1982

DRAFTCOL, DRAFTMAR, DRAFTPAR, DRAFTGAY, DRAFTCO, DRAFTDEF

Circle one code for each item. The question refers to across-the-board exemption for each group named. If R thinks some college students or married persons, etc., should be exempted and others not, circle code "2" (not exempt).

Code 1 only if R thinks all members of the group should be exempted from a draft.

1984

VETFAM, VETFAMNW

VETFAM refers to R's spouse (or former spouse), parents, children, brothers, and sisters, whether or not they are now living with R and even if they are deceased.

1984

VETFAM, VETFAMNW, VETAID

Note the distinction in the persons inquired about in these two questions.

1984

COPUNISH, COJAIL

This question refers to refusal to register for any reason and asks whether young men should be punished in any way.1984

COJAIL

In COJAIL, the length of sentence is irrelevant. If R approves of jail for any length of time, circle code 1.1984

MILOKME

This is an "all things considered" type of question, "for most young men" probe as necessary for overall opinion.

1984

NUKEWAR, LANDWAR, MORENUKE, LESSNUKE, NONUKE, GUERILLA

Read the introduction to this question carefully and take the time to be sure the respondent understands the nature of the task.

1984

DEFWRKEV

[A major part] Do not try to define "a major part." We want the respondent's own impression.1984

RESDEFWK

If your PSU is an SMSA, ask this question in terms of the metropolitan area ("The Chicago, Houston, Atlanta, Baltimore...metropolitan area"), whether you are interviewing in the central city or in the suburbs. If your PSU is not an SMSA, use the name of the county.

NUMGIVEN After CLOSE12-CLOSE15, CLOSE23-25, CLOSE24-25, CLOSE45, please allow R to pause, collect thoughts, and report. Probe after first reports. We want people with whom R discusses important personal matters. Do not try to define or give examples. If R reports two people with the same first name, ask for last initial of each.

1985, 87

NUMGIVEN Code the total number reported [7]. Example: In response to NUMGIVEN, R says "My mom and dad; my brothers Mutt and Jeff; my friend Dave; another friend Mark; and my girlfriend Pam."

1985, 87

EQCLOSE, RCLOSE1-5
Note skip.

1985

CLOSE12-15, CLOSE23-25, CLOSE24-25, CLOSE45

CLOSE12-15, CLOSE23-25, CLOSE24-25, CLOSE45 is modeled after a mileage chart. If you wanted to find the distance between Chicago and Boston on a mileage chart you would look along the vertical axis for Chicago, along the horizontal axis for Boston and find the intersection. See Figure 1. Voila! You found it. It's 1004 miles from Chicago to Boston.

FIGURE 1

[SHOWS MILEAGE GRID]

We realize that the grid in CLOSE12-15, CLOSE23-25, CLOSE24-25, CLOSE45 is new. Imagine a respondent names 4 people in Question 313: Bob, John T., John R., and Mary. We want to ask CLOSE12-15, CLOSE23-25, CLOSE24-25, CLOSE45 for each possible pair of these 4 people. First we pair each with Bob. The pairs are: Bob and John T., Bob and John R., and Bob and Mary. Then we pair everyone except Bob with John T. The pairs are: John T. and John R., and John T. and Mary. The only pair left is John R. and Mary. See Figure 2.

PERSON	NAME 1 BOB	NAME 2 JOHN T.	NAME 3 JOHN R.	NAME 4 MARY	NAME 5
NAME 2 JOHN T.	A. Yes...1 No....2				
NAME 3 JOHN R.	B. Yes...1 No....2	A. Yes...1 No....2			
NAME 4 MARY	A. Yes...1 No....2	B. Yes...1 No....2	A. Yes...1 No....2		
NAME 5	B. Yes...1 No....2	A. Yes...1 No....2	B. Yes...1 No....2	A. Yes...1 No....2	
		B. Yes...1 No....2	A. Yes...1 No....2	B. Yes...1 No....2	

Write names 1-5 across and 2-5 down. If less than 5 names cross out unused rows. After you write names in the grid, return to page 273 and ask EQCLOSE and RCLOSE1-5.

1985

SEX1-5, RACE1-5, SPOUSE1-5, PARENT1-5, SIBLING1-5, CHILD1-5, OTHFAM1-5, MEMGRP1-5, NEIGHBR1-5, FRIEND1-5, ADVISOR1-5, OTHER1-5, TALKTO1-5, KNOWN1-5, EDUC1-5, AGE1-5, RELIG1-5

Use abbreviated form of these questions after you ask them for the 1st person. Repeat categories only as needed. It is not necessary to read everything over and over.

1985

SEX1-5

Ask SEX1-5 for each person before going onto RACE1-5. Continue this pattern through RELIG1-5.

1985

RACE1-5

Repeat for each friend listed (up to five times).

1985

SPOUSE1-5

If R says "Don't know" for a particular category, write DK here, on dotted line, next to appropriate category and record verbatim.

1985

TALKTO1-5

[talk] "talk" includes phone conversation.

1985

EDUC1-5 [highest level of education] highest level completed.

1985AGE1-5 Code middle range given. Example: "He's in his mid-fifties." Code 55.1977-78, 80, 83, 84, 86-91, 93-94

MEMFRAT, MEMSERV, MEMVET, MEMPOLIT, MEMUNION, MEMSPORT, MEMYOUTH, MEMSCHL, MEMHOBBY, MEMGREEK, MEMNAT, MEMFARM, MEMLIT, MEMPROF, MEMCHURH, MEMOTHER, MEMNUM
 If R asks, "organizations" refers to groups that have characteristics such as newsletters, dues, meetings, etc.
 Suggested probe: "Are there any other kinds of groups or organizations you belong to that we may not have covered?"

1975

Omits last two lines.

1974

None.

1987

MEMFRAT, MEMSERV, MEMVET

In "A" code "yes" or "no" for each kind of group listed, do not code only the groups to which R belongs. Complete MEMFRAT before asking MEMSERV and MEMVET. Ask B and C for each "yes" in MEMFRAT. Code "yes" or "no" for each group to which R replied "yes" in MEMFRAT. You need not code further any for which you coded "no" in A.

1987

CHURHGRP [the church (synagogue) itself] That is, just a member of the congregation, attending regular worship services and not a member of a separate groups such as adult fellowship, Bible study, committees, etc.

1987

SWAYVOTE [candidates? Do] Don't Pause.

1987

LOCLOBBY, LOCSELF

In this question we are referring to members of the local government or person(s) of influence in the community where R lives.

1987

OTHLOBBY In LOCLOBBY, the reference is to the local government and in this question we are referring to officials outside the local government.

1987

GOVERNOR, USREP, SCHLHEAD

Some Rs may be frustrated by not knowing the answers to Qs. 347-349. Let them know that their responses are important regardless of whether or not they are right.

"Don't Know" refers to the R not knowing the correct answer. You, as interviewer, are expected to research these Qs. if you do not know the correct names.

1987

GOVERNOR What is the name of the governor of the state in which you are interviewing?

1987

USREP What is the name of the Congressman of the district in which you are interviewing?

1987

SCHLHEAD The correct answer to either the head of the local school board or the name of the superintendent of schools. It may be that there is more than one school system in the locality. Elementary Schools may be separate school system and the local high school a separate system. If this is the situation the locality where you will be interviewing obtain the names of the head of both systems. The answer of either would be considered "correct."

WKRYEARS

Working for pay defined as R receiving cash wages, salary, commission, or tips for his/her time.

1991

NUMUNEMP, TOTUNEMP

"Looking for work" to be self-defined by the respondent. Generally, it can include any activity related to finding work or starting a business or profession.

1991

EMPYEARS, JOBYEARS

Be sure to probe for month and year.

1994

ALIKE1-8

The questions in this section have been taken from a standard ability test. Some of the respondents may be familiar with this test and may ask if you are administering an intelligence test. You should respond that we are not testing their IQ. That's not possible. IQ involves many different skills; it takes a long time to assess and can only be assessed by trained psychologists. Rather, we are interested in how people of different ages solve problems of abstract reasoning. These similarities questions tap such reasoning skills.

It is critical that you write everything the respondent says in response to every question. DO NOT leave out any words or phrases. If the respondent gives more than one answer per question, write in all answers given.

Also, it is imperative that you distinguish between "don't know" answers and refusals. For example, if a respondent says, "I don't really know," do not write as "refusal." Likewise, if someone says, "There are no similarities," you would record that response. In general, write down what the R says. Start with Item A. Say, "In what way are an ORANGE and a BANANA alike?"

If R replies that they are both fruit, say, "Good" and proceed to the next item. If R says something else, like "You eat them both," or "They both have skins," say "That's right, you eat them both. Also, they are fruit," or "That's right, they both have skins. Also, they are both fruit." Then go to the next item.

If R does not respond at all or says something that makes no sense, say, "They are both fruit, you eat them both," and go on to the next item. (Always record what the respondent says, even on this first item.)

DO NOT probe at all, unless the response is ambiguous or unclear. From the second item onward, DO NOT suggest any answer, and DO NOT probe at all, except to clarify a response that has already been offered. Probes should be indicated in the record, and responses written verbatim. Go on to the next item if there is a prolonged silence, even if R does not say, "I don't know."

If a respondent volunteers more than two answers to an item, record only the first two answers, then politely interrupt the respondent, and go on to the next item.

1994

FSTSPYR

Questions 478-482, asking about the R's "First [spouse]," should be asked that way if R has been married more than once and in terms of "Former [spouse] if R has not been married more than once.

If Respondent refuses, hesitates, or otherwise seems to be reluctant to report the occurrence of particular events, try to reassure the Respondent that we know some events may be personal or sensitive. Tell the Respondent that in order to deal with social conditions and help families, we need to know what events and conditions are affecting their lives. If Respondent remains unwilling to answer, please note and do not push further.

Certain questions apply only to certain groups of Respondents such as:

- those who worked during the last year
- those with a husband/wife/partner during the last year
- those with a child alive during the last year

If you are certain from this question and what you've already learned about the Respondent that these questions don't apply, you can skip over them and enter "No" as the appropriate response. Don't skip over any question unless you are absolutely certain they don't apply.

Read phrases in parentheses as examples if R needs clarification.

APPENDIX C:

GENERAL CODING INSTRUCTIONS

The coding specifications are the work rules for coding the information collected by the interviewers. Although many questions are coded independently, others link up with a network of questions—and the networks must be internally consistent. For example: If no father or father substitute is given for FAMILY16, all questions which refer to father or father substitute (e.g., father's occupation or education) must be coded as "BK" (blank). Other networks include questions relating to marital status and labor force status. The coder specifications instruct the coders to watch for interconnections both within questions and within networks of questions.

The internal consistency of these networks has been incorporated into the NORC cleaning specifications. These cleaning procedures are computer programs which test for the logical consistencies set up in the coding specifications. When inconsistencies are found, they are printed out as error statements and are then corrected. Coding and cleaning specifications are used jointly to help insure the integrity of the data.

Note that much of the following only applies to pre-CAPI surveys.

For detailed information on data cleaning at NORC, see the following:

Winona Adkins: EDIT—The NORC Cleaning Program: A program to develop a sequential file. Chicago, NORC, Revised April, 1975.

GENERAL CODING INSTRUCTIONS

- A. Coding must be done in red pencil.
- B. Never erase any interviewer-circled codes or comments. If the questionnaire must be corrected, draw a line through the code circled in error. Do not make it impossible to read what was done originally. Please note that green marks are field department corrections.
- C. Every column must have a code, and no column may contain more than one clearly circled code.
- D. For those questions noted FLAG: this instruction applies to questions where special coding problems have been anticipated. Coders will be provided with a supply of little clips (flags) to attach to the page where the problem occurs. Coders may also flag all other areas in the questionnaire where information is incomplete or unclear, and requires the supervisor's attention.
- E. For those questions noted LIST: record on an "OTHER" list form the questionnaire identification and all verbatim comments relating to the response to be listed. A separate list should be kept for each question. If, however, a question has more than one listed code, keep a separate list for each code. Record at the top of each form the study number, the question number, the column number, and the listed code. In most surveys, all "Other (SPECIFY)" codes are listed.
- F. The "no answer" (NA) and "refusal" code for this questionnaire is '9' in a one-column field, '99' in a two-column field, etc. NA is coded when the respondent does not give an answer, when the interviewer fails to ask a question or to record the answer, when the written information is contradictory or too vague to code, and when the coder needs to supply a code in order to resolve a tricky skip pattern. NA is allowed for every question except those specifically excepted in the codebook, such as race and sex.
- G. The "not applicable" (NAP) code is "R," which means "reject" or "blank" to our keypunchers. NAP is coded when a question was not supposed to have been asked (i.e., because of directions to skip it).
- H. If "don't know" (DK) is not a preprinted code, then DK is coded '8' in a one-column field, '98' in a two-column field, '998' in a three-column field, etc. If DK has been listed along with other responses in one question, edit out (or do not code) the DK response.
- I. A filter question is one that determines whether or not a series of other questions, dependent on the filter question, should be asked. On the basis of the response to the filter question, the interviewer is instructed either to ask the dependent questions or to skip them. Generally, the interviewer is instructed to skip the dependent questions if the answer to the filter question is "no" and to ask these questions if the answer is "yes". A dependent question can, itself, function as a separate filter question that governs a different skip pattern.

The interviewer's skip instructions have been restated in the codebook in terms of codes. Coders should code "not applicable" (NAP) for questions that were to have been skipped by the interviewer. Questions that are not to be coded NAP (not to have been skipped by the interviewer) must have either "answer" or "no answer" (NA) codes.

If the filter question is coded NA, all dependent questions must be coded NA, unless the dependent questions contain valuable data—in which case the supervisor should select what data are to be kept. If more than one response is given to the filter question, or if the filter question was left blank, the supervisor should examine the dependent questions to determine what should be coded for the filter question. If a code for the filter question still cannot be determined, code the filter question NA.

The object of editing filter questions is to make the data fit into the correct skip pattern. However, this is to be done in a logical fashion, i.e., never falsify or inflate the data just to make them fit. You may, in order to make the data match the skips, exchange "no answer" and "not applicable" codes with wild abandon. Be careful when you are eliminating real data. Make sure it is unnecessary or duplicated elsewhere or trivial or wrong. Settle your doubts about inconsistencies with the supervisor. When you are coding in real data, make sure you have grounds for your assumptions.

- J. For those questions noted precoded: The interviewer's definition of a precoded question is one in which the answer categories are read as part of the question. The interviewer is instructed to circle the corresponding response code. If more than one code has been circled, but the respondent's remarks have been written in, or if one code has been circled, but the interviewer's comments are inconsistent with the circled code, flag the question. If the response is uncodeable, code NA.
- K. For those questions noted field-coded: The interviewer is instructed to record the respondent's answer verbatim and then to circle or write in the appropriate code. If the response is in the same words as the code categories, the interviewer has the option of not recording verbatim, but simply circling the code number as in the handling of precoded questions. If no codes have been circled, code the verbatim response. When the verbatim response is inconsistent with the circled or written codes, code the verbatim response.
- L. For those questions noted zero-fill: Make certain that the numbers are readable, edit all answers so that the units digit is furthest to the right, and enter '0's to the left of the first significant digit until the entire field of columns is filled. If the answer is "none," code '0' in all columns. Rounding instructions are as follows:

Fractions – Code whole numbers only--drop any fractions.

Ranges – If a range is given (e.g., 8-10), code the mid-point. IF the mid-point of a range is between two consecutive numbers, code according to the rule for rounding fractions.

The highest codeable number in a one-column field is given in the codebook at each question. The highest codeable number in a two-digit column field is '96,' in a three-column field '996,' etc. List all answers that exceed the highest codeable number.

- M. For those questions noted code as many as apply: These are precoded, field-coded, or open-ended questions which have been designed to allow multiple responses by assigning each code a column. All responses not chosen must be coded NAP. If the entire question was left unanswered, code all columns NA.
- N. For those questions noted code up: If there are more responses than columns set aside, code the responses which are highest on the list of codes (lowest code numbers).
- O. For those questions noted flip a coin: If there is a consecutive multiple responses in the same category (e.g., 1 = agree strongly, 2 = agree slightly; but not 2 = agree slightly, 3 = disagree slightly), the coder will flip a coin to determine which answer is to be edited out.
- P. For those questions noted code up to number(s): These questions are field-coded or open-ended questions which have been designed to allow multiple responses. Code (or make sure the interviewer has coded) the first item mentioned by the respondent in the first column(s) set aside for the answer; code the second item mentioned in the second column, and so on. If there are fewer items mentioned than columns set aside, code the rest of the columns NAP. If there are more items than columns set aside, coders may be instructed in the codebook to list those items left uncoded.

APPENDIX D: RECODES

Recoding was done on questions when the original data format seemed inappropriate, awkward, or too liberal in its use of columns. Some questions which were originally designed as two column questions were recoded into one when the responses indicated that the second column was unnecessary. Other variables were recoded into their desired final format. Education, for example, required several questions to elicit adequate information for the final recoded two variable formats (years of schooling and degrees received).

The following section includes for each variable: the major reason for recoding; the method of recoding; and the question as it appeared on the questionnaire. This section includes all variables which are referred to by [RECODE] in the codebook. The question number, listed under each variable, indicates where the recoded question can be found in the codebook.

AGE RECODE

(AGE)

Intent of Recode

In an attempt to maximize the validity of the responses, the interviewer asked for the date of birth rather than the age of the respondent. This format, however, necessitated a recode into the more workable two-column code of exact age.

Method of Recode

The respondent's age was calculated by subtracting the year of birth from the survey year. The results of the subtraction were entered into AGE. Ages of 90 and over were recoded into 89.

Original Question

13. 1972-1975
In what year were you born?

1976-2016
What is your date of birth?

MONTH DAY YEAR							

EDUCATION RECODE

(EDUC, PAEDUC, MAEDUC, SPEDUC, COEDUC, DEGREE, PADEG, MADEG, SPDEG, CODEG)

Intent of Recode

The education data, as originally designed, were to consist of two independent variables. The first, a continuous variable, would represent the number of years in school, and the second, an ordinal variable, would indicate degrees actually received. Ease of handling and a desire to make use of continuous data where present motivated this two-variable design. Certain alterations to this design were made to facilitate the interviewing process. Recoding was then necessary to reconcile the data with the original design.

Method of Recode

For the continuous variable, the years of schooling is based on two questions. The first asked: "What is the highest grade in elementary school or high school that {response to dadfill} finished and got credit for?" The second asked "How many years did he complete?" for those who say "yes" to "Did he ever complete one or more years of college for credit—not including schooling such as business college, technical or vocational school?". These data were combined into one continuous scale. For the second variable (degrees received), the degree marked represents the highest degree actually achieved. The variables for degrees and years of schooling were independently collected and coded—one was not generated from the other.

Blanks in the original data, denoting "not applicable," have been recoded to '97' for the years of schooling variable and '7' for the degrees received variable. This was done for the convenience of persons who use computer programs which read blanks as zeros.

Original Question

While only the "Father's education" question is shown, Mother's, Spouse's, Respondent's, and Respondent's First Spouse's education was collected with the same question format.

HOUSEHOLD COMPOSITION RECODE

(HOMPOP, BABIES, PRETEEN, TEENS, ADULTS)

1975Intent of Recode

Half of the sample for the 1975 General Social Survey was a full probability sample, with predesignated respondents (See Appendix A: Sampling Design). For this portion of the sample, Household Enumeration Forms were completed for the chosen households prior to selection of the actual respondent. The questionnaires for the block quota half of the sample were therefore modified in order to obtain information comparable to that on the Household Enumeration Form. The data thus collected were recoded in order to conform in format to the household composition variables of previous General Social Surveys.

Method of Recode

The information collected about each household member was used to obtain the number of residents in each age group.

Original Question

A number of questions were asked about each household member. Those used in computing the variables on the General Social Survey are:

- 2) Please tell me the names of the people who usually live in this household?
- 3) Have we forgotten anyone: such as babies or small children; roomers; people who usually live here but are away temporarily—on business trips, vacations, temporarily in a hospital, and so on?
- 5) What is (PERSON)'s relationship to (HEAD OF HOUSEHOLD)?
- 7) How old was (HEAD/PERSON) on (his/her) last birthday?
- 9) Are any of the people we have listed staying somewhere else right now?

IF YES:

- 10) Who is staying somewhere else right now?
- 11) Where is (PERSON) living right now: is (PERSON) staying at another household; is (he/she) traveling; is (he/she) in some institution or dormitory—like at college, or in a hospital or somewhere; or what?

1977+

Household composition was determined as in 1975, but relationship to respondent was asked in questionnaire instead of being taken from the Household Enumeration Form.

Original Question

Now I would like you to think about the people who live in this household. Please include any persons who usually live here but are away temporarily—on business, on vacation, or in a general hospital—and include all babies and small children. Do not include college students who are living away at college, persons stationed away from here in the Armed Forces, or persons away in institutions.

Is everyone in the household related to you in some way?

YES 1
NO (ASK A) 2

A. IF NO: How many persons in the household are not related to you in any way?

SRC NEW BELT CODE

(SRCBELT)

Intent of Recode

The SRC belt code (a coding system originally devised to describe rings around a metropolitan area and to categorize places by size and type simultaneously) first appeared in an article written by Bernard Laserwitz (American Sociological Review, v. 25, no. 2, 1960), and has been used subsequently in several SRC surveys.

Its use was discontinued in 1971 because of difficulties particularly evident in the operationalization of "adjacent and outlying areas." For this study, however, we have revised the SRC belt code for users who might find such a variable useful. The new SRC belt code utilizes "name of place" information contained in the sampling units of the NORC Field Department.

Method of Recode

This recode assigns codes to the place of interview. City characteristics were determined by reference to the rank ordering of SMSAs in the Statistical Abstract of the United States, 1972, Table 20. Suburb characteristics were determined by reference to the urbanized map in the U.S. Bureau of the Census, 1970 Census of Population, Number of Inhabitants, Series PC (1) -A. The "other urban" codes were assigned on the basis of county characteristics found in Table 10 of the 1970 Census of Population, Number of Inhabitants. For cases from later frames analogous tables from subsequent Censuses were used.

PARTY AFFILIATION RECODE

(PARTYID)

Intent of Recode

The question was recoded so that it would match the Michigan Survey Research Center's presentation of the data.

Method of Recoding

The recode considers both the party affiliation and the subjective intensity of that party affiliation in the assignment of new codes.

Original Question

- Republican (ASK A).....1
- Democrat (ASK A).....2

QUALITIES FOR CHILDREN RECODE

(MANNERS, SUCCESS, HONEST, CLEAN, JUDGMENT, CONTROL, ROLE, AMICABLE, OBEYS, RESPONSIVE, CONSIDER, INTEREST, STUDIOUS)

Intent of Recode

The codes were assigned to the responses so that they formed an ordinal scale ranging from the "one most desirable" to the "one least desirable."

Method of Recode

Qualities not chosen as one of the three most desirable or the three least important were simply assigned the code (3).

Original Question

1. Which three qualities listed on this card would you say are the most desirable for a child to have? CIRCLE THREE CODES ONLY IN COLUMN A.
2. Which one of these three is the most desirable of all? READ THE THREE R. CHOSE. CODE ONE ONLY IN COLUMN B.
3. All of the qualities listed on this card may be desirable, but could you tell me which three you consider least important: CIRCLE THREE CODES ONLY COLUMN C.
4. And which one of these three is least important at all? READ THE THREE R. CHOSE. CODE ONE ONLY IN COLUMN D.

Intent of Recodes

For user convenience, the information on traumatic events has been presented in a condensed and abridged format. Users interested in the unabridged data should contact the GSS project staff at NORC (1155 East 60th Street, Chicago, Ill. 60637).

 If FAMILY16 equals "6," "7," "8," and some "0" and father not coded in 90.A.1, 90.B.1, or 90.C.1, then PADEATH equals punch "8."
 If father not coded in 90.A.1, 90.B.1 or 90.C.1 and 90.A, 90.B, or 90.C equals "9" and father alive when respondent 16 years old, then PADEATH equal punch "9."
 If father not coded in 90.A.1, 90.B.1, or 90.C.1 and FAMILY16 equals "9," then PADEATH equals punch "9."
 If father not coded in 90.A.1, 90.B.1, or 90.C.1 and FAMILY16 equals "3," or "5" and FAMDIF16 equals "9," then PADEATH equals punch "9."
- M. MADEATH
Coded in an analogous manner to PADEATH.
- N. CHLDDTH
 If CHILDS greater than zero and child and child's husband or wife not coded in 90.A.1, 90.B.1 or 90.C.1, then CHLDDTH equals punch "0."
 If CHILDS greater than zero, and child or child's husband or wife coded in 90.C.1 and not coded in 90.B.1 and 90.A.1, then CHLDDTH equals punch "1."
 If CHILDS greater than zero and child or child's husband or wife coded in 90.B.1 and not coded in 90.A.1, then CHLDDTH equals punch "2."

If CHILDS greater than zero and child or child's husband/wife coded in 90.A.1, then CHLDDTH equals punch "3."
 If CHILDS equals zero, then CHLDDTH equals punch "Blank."
 If CHILDS equals "9" and child or child's husband or wife not coded in 90.A.1, 90.B.1, or 90.C.1, then CHLDDTH equals punch "9."
 If CHILDS greater than zero and 90.C equals "9" and child or child's husband not coded in 90.B.1 or 90.A.1, then CHLDDTH equals punch "9."
 If CHILDS greater than zero and 90.B equals "9" and child or child's husband not coded in 90.A.1, then CHLDDTH equals punch "9."
 If CHILDS greater than zero and 90.A equals "9," then CHLDDTH equals punch "9."

- O. SIBDEATH
Coded in an analogous manner to CHLDDTH.
- P. SPDEATH
Coded in an analogous manner to CHLDDTH (e.g., if MARITAL equals "never married" then SPDEATH equals "Blank").
- Q. TRAUMA1
Number of traumas happening to respondent last year (count one if DIVORCE5 equals "2" or "3," HOSDIS5 equals "2" or "3," DEATH5 equals "3, 4, 5, 6, 7, or 8," and UNEMP5 equals "3, 4, 5, 6, 7, or 8.")
If DIVORCE5, UNEMP5, HOSDIS5, or DEATH5 equals "9," then TRAUMA1 equals "9."
- R. TRAUMA5
Number of traumas happening to respondent during last five years (count one each if DIVORCE5 or HOSDIS5 equals "1, 2, or 3" or DEATH5 or UNEMP5 equals "1, 2, 3, 4, 5, 6, 7, or 8").
If DIVORCE5, UNEMP5, HOSDIS5, or DEATH5 equals "9," then TRAUMA5 equals "9."
- S. TRAREL1
Number of traumas happening to respondent's relatives during the last year (count one each if DIVREL1, UNREL1, or HOSREL1 greater than zero).
If DIVREL1, UNREL1, or HOSREL1 equals "9," then TRAREL1 equals "9."
- T. TRAREL5
Number of traumas happening to respondent's relatives during the last five years.
If DIVREL1 or DIVREL4 greater than zero, then TRAREL5 counts 1.
If HOSREL1 or HOSREL4 greater than zero, then TRAREL5 counts 1.
If UNREL1 or UNREL4 greater than zero, then TRAREL5 counts 1.
If DIVREL1 and/or DIVREL4 equals "9" and the other equals "0," then TRAREL5 equals "9."
If HOSREL1 and/or HOSREL4 equals "9" and the other equals "0," then TRAREL5 equals "9."
If UNREL1 and/or UNREL4 equals "9" and the other equals "0," then TRAREL5 equals "9."
- U. TRATOT1
Sum of TRAUMA1 and TRAREL1. If either TRAUMA1 or TRAREL1 equals "9," then TRATOT1 equals "9."
- V. TRATOT5
Sum of TRAUMA5 and TRAREL5. If either TRAUMA5 or TRAREL5 equals "9," then TRATOT5 equals "9."

NETWORK CLOSENESS RECODE

(CLOSE12, CLOSE13, CLOSE14, CLOSE 23, CLOSE24, CLOSE25, CLOSE34, CLOSE35, CLOSE45)

315. IF LESS THAN 5 NAMES MENTIONED CROSS OUT UNUSED BOXES.

Please think about the relations between the people you just mentioned. Some of them may be total strangers in the sense that they wouldn't recognize each other if they bumped into each other on the street. Others may be especially close, as close or closer to each other as they are to you.

First, think about NAME 1 and NAME 2. ASK CLOSE12, CLOSE13, CLOSE14, CLOSE15, CLOSE 23, CLOSE24, CLOSE25, CLOSE34, CLOSE35, CLOSE45 FOR FIRST PAIR.

A. Are _____ and _____ total strangers?

Intent of Recode

To simplify analysis, mutually exclusive dichotomies were collapsed into a single three-point scale.

Method of Recode

A response of "yes" to part A became code 3, "total strangers." A response of "no" to part A and "no" to B became code 2, "neither close nor strangers." A response of "yes" to part B became code 1, "especially close."

ORGANIZATIONAL MEMBERSHIP RECODE

(MEMFRAT, MEMSERV, MEMVET, MEMPOLIT, MEMUNION, MEMSPORT, MEMYOUTH, MEMSCHL, MEMHOBBY, MEMGREEK, MEMNAT, MEMFARM, MEMLIT, MEMPROF, MEMCHURH, MEMOTHER, MEMNUM)

Intent of Recode

For user convenience, the total number of organizations has been computed.

Method of Recode

If a respondent answered a "No" to all of the organizational items, MEMNUM was code "00." If a respondent answered "Yes" to any organizations, the total number of "Yes" responses was counted and put in MEMNUM.

Original Question

Question presented in the codebook is as it appeared in the questionnaire.

SIMILARITIES RECODE

(ALIKE1-8)

Intent of Recode

The recode provides an approximate scale to measure and compare respondents' general reasoning abilities in categorizing and/or comparing two objects.

Method of Recode

Each item is scored 2, 1, or 0, depending on the degree of understanding expressed and the quality of the response. The general criteria for scores of 2, 1, and 0 for any item are as follows:

2 POINTS - any general classification which is primarily pertinent for both members of the pair ("An eye and an ear are sense organs," "A poem and a statue are works of art").

1 POINT - any specific property or function which is common to both and constitutes a relevant similarity ("An egg and a seed both have shells," "A poem and a statue stir feelings"). Also give 1 point to less pertinent, but correct, general classifications ("An eye and an ear are parts of the body," "Air and water contain oxygen").

0 POINTS - specific properties of each member of the pair, generalizations which are incorrect or not pertinent, differences between the members of the pair, or clearly wrong responses.

The degree of abstraction of the subject's response is an important determinant of the score. That is why pertinent general categorizations are given 2 points, while the naming of one or more common properties or functions of the members of a pair (a more concrete problem-solving approach) merits only 1 point. Thus, stating that a dog and a lion (Item 2) are "Animals" (their general category) earns a higher score than saying "They both have tails" (a property common to each). On the other hand, stating that an orange and a banana (Item 1) are "Fruit" earns more credit than stating that both are "Foods"; while the category of "fruit" is less general than that of "food," it is the more pertinent category. Calling work and play (Item 12) "Basic activities" is less concrete (and hence worth a higher score) than "Things people do."

Of course, even a relatively concrete approach to solving the items ("A dog and a lion both have tails") requires the subject to abstract something similar about the members of the pair. Some subjects are unable to do this and may respond to each member separately rather than to the pair as a whole ("you see with your eyes and hear with your ears"). Although such a response is a true statement, it is scored 0 since it tells how the members of the pair are dissimilar rather than how they are similar.

If a subject gives multiple acceptable responses to an item, score the best response. If a subject gives multiple responses to an item and one or more of the responses are incorrect (i.e., would be scored 0 if given alone), ask,

Which one is it?

and score according to the subject's decision.

Examples of responses earning 2, 1, and 0 points follow for some items.

Items and Sample Responses**1. Orange-banana**

2 POINTS - Fruit.

1 POINT - Food...To eat...Have peels...Same color...Grow...Contain vitamins.

0 POINTS - Round...Same shape...Contain calories.

2. Dog-lion

2 POINTS - Animals...Mammals.

1 POINT - Have legs (fur,tails)...They bite.

12. 0 POINTS - Look alike...A lion growls, a dog barks...Dangerous...Belong to same species (Q).¹
Work-play

2 POINTS - Basic human activities...Things that all people do...Activities valued by society...Give value to living...Both require effort for success.

1 POINT - Things you do (Q)...Human activities (Q)...Keep you busy...Ways to spend your time...Use up energy...Things done during the course of the day...Can get enjoyment from both.

0 POINTS - Must do both of them...Necessities of life...Keep you out of trouble...You do them with other people...Keep you from being depressed (Q).

PROBFIX1-3, BRKDDO1-3, and MNILDO1-3

I. Denial

11. I would try to forget about it, not think about it

II. Displacement

21. Hostility. (Not directed at source of problem) I would get mad, irritable, take it out on someone else (R's response is not coded here if R's problem would involve another person, and R would get angry at that person. In such a case, (63) is coded.)

22. Would engage in activity. I would go for a walk; I would read a book; I would get busy with something else; I would try to get engrossed in something else to take my mind off it (here is coded any activity which R would engage in which does not directly deal with the problem, but may relieve some of the anxiety about it—unless medications, pills, etc., which are coded (61).)

23. Would seek release from awareness. Would get drunk, take a drink, take dope.

24. Would seek release from awareness. Would go to sleep (response is not coded here if R says, "I would go to sleep in order to get refreshed and be able to handle the problem better afterwards.")

25. Fantasy Action. R would think about magical type solutions to problems or would imagine problems don't exist. I would imagine myself as the president of the company and then nobody could criticize me

III. Passive Reaction

31. Nothing. I would do nothing, wouldn't do anything; there wouldn't be much to do about it; there would be nothing to do; I would just let things take their course; I would just hope for the best; would just give up

IV. Passive Reaction - Problem still salient

41. Worry. I would worry about it, I would fret over it; would just keep on worrying, thinking about it; I would keep on worrying till things work out

V. Passive Reaction - Religious

51. I would pray. Would turn to prayer; would trust in the lord (going to minister is not coded here; in such case, (82) is coded. If NA whether (51) or (82) should be coded, as turn to the church, go to the church, read the Bible, the scriptures or inspirational literature, (51) is coded.)

VI. Reactions which are not clearly coping or denial

61. Would take medications. Tranquilizers; Aspirins, etc. - any medication treating physical symptoms and tensions (if prescribed by a doctor, response is coded here and also under (82).)

62. Would pull myself together; exercise self-control (NA whether this is attempt to deny and forget the problem - coded under (11) - or prelude to attempts to solve the problem - coded in the (70s))

¹When the notation "(Q)" appears in the scoring rules, this indicates that the response preceding the (Q) should be queried.

- 63. Expressions of hostility directed at person seen as source of problem (if would not be directed at source of problem, (21) is coded.)
- 64. Palliatives measures which would ‘cope’ with a problem defined in physical or general terms, but would “deny” and/or “displace” specific “personal problems” - attempts to reduce immediate pressures and tensions. Take a vacation; would take it easier, try to relax a little more (except those responses coded in (61))
- 65. Meditation
- 66. Faith or confidence in self; strength; fortitude
- 67. Social comparison; R better off than other; seeing others that are worse off than me.
- 68. Emphasis on positive aspects of life; optimism; sense of humor; positive view of life.
- 69. Other reactions which are not clearly coping or denial

VII. Coping Reaction - Independent

- 71. Self-assessment, thought would be mode of problem-solving attempts. I would try to figure out what is wrong; see what the problem is, who is at fault (if whether (71) or (72), (72) is coded)
- 72. Immediate action would be mode of problem-solving. Would solve it; just keep on trying; would do something about it (if NA whether (71) or (72), (72) is coded.)
- 73. Would cope with interpersonal problem by talking it over with person involved. (if person not involved or if NA whether person involved or not, (81) is coded.). Would talk it over with spouse if marriage problem (Note. Specific person is not coded in SOURCES OF HELP)
- 74. Permanent situational limitation of sphere of activity would be mode of problem-solving; I’d get another job; I’d move to another city (temporary situational changes such as “I’d take a vacation” should be coded under (64).)
- 75. Permanent interpersonal limitation of sphere of activity would be mode of problem-solving. would eliminate and/or change relationships seen as causing problem (change friends; get a divorce)

VIII. Coping Reaction - Outside help sought

- 81. Talking it over with INFORMAL SOURCE(S) -- family, friends, neighbors, etc. (unless coping with interpersonal problems by talking it over with person involved, in which case, code 73. talk it over with someone, talk with about it; also code here general mentions of person(s). e.g., spending time with, being with family, friends, “my parents,” “my wife,” etc.; if NA whether 81 or 82, code 81. (specific people or institutions are coded ahead in SOURCES).
- 82. Talk it over with FORMAL SOURCE(S) -- doctor, lawyer, clergyman, psychiatrist, psychologist, counselor, etc.; include “got professional help,” etc.; if source of help is both a formal AND informal source code 82; if NA whether 81 or 82, code 81.
- 83. Admit self/be admitted to/was admitted to mental hospital, psychiatric ward, etc.

IX. Missing Data

- 98. DK; it would never happen to me; wouldn’t know what to do
- 99. NA

DISTORTIONS OF REALITY

- 701. Hallucinations.
- 702. Delusions, other than persecution.
- 703. Delusions of persecution (ONLY WHEN CLEAR-CUT. OTHERWISE CODE 53/4).
- 704. Distrust, suspicion; paranoid, persecutory trends; ideas of reference (SEE ALSO CODES 52/0, 54/3, 54/4, 54/6).
- 705. Hypochondriacal tendencies, preoccupation with own health.
- 706. Disordered imagination, vague and unspecified.
- 707. Clouding of reality.

- 708. (Excessive) fantasizing; withdrawal from, break with reality (WHEN EXTREME, SEE CODES 53/9, 55/8, 56/3).
- 709. Inability to accept, face, adjust to reality, life ("Escapism", Maladjustment")
- 710. Lack of perspective; impaired judgement (SEE ALSO CODE 55/4).
- 711. (Conscious) falsification, lying, misrepresentation (SEE ALSO CODE 55/0).
- 712. Reality distortions, general and unspecified.
- 799. No mention of symptoms of this type

DISORDERED SELF-CONCEPT

- 801. Egocentric, selfish, (excessively) demanding.
- 802. Self-important, boastful, self-assertive.
- 803. Self-righteous; self-justifying, obstinate, stubborn, ("projecting blame").
- 804. Critical, dissatisfied, complaining.
- 805. Self-accusatory, self-blaming, self-punishing, "masochistic".
- 806. Self-pitying, martyred; feelings of rejection.
- 807. Insecure, lack of self-confidence.
- 808. Submissive, dependent, indecisive.
- 809. Self-centered talk.
- 810. Lack of self-insight.
- 811. Functional impairment (SEE ALSO 52/0, 54/Y)
- 812. (Complete) inability to function, when not clearly 52/0.
- 899. No manifestations of this type mentioned.

MOOD DISTURBANCES

- 901. Outgoing, extroverted, elated.
- 902. Worried, fearful, anxious. (SEE ALSO CODES 53/4, 53/5 54/7)
- 903. Nightmares, disturbing dreams.
- 904. Irritable, excitable, sensitive, easily upset (SEE ALSO 55/5).
- 905. Hostile, aggressive, difficult to get along with. (SEE ALSO 49/8, 55/4).
- 906. Unhappy, depressed.
- 907. Defeated, beaten; surrendering, giving up; (feeling of inadequacy, self-doubt).
- 908. Withdrawn (SEE ALSO 55/0, 55/X).
- 909. Socially ill at ease.
- 910. Secretive, self-concealing ("undoing", "compensatory").
- 911. Apathy, indifference, lack of initiative ("disenchantment with life").
- 912. Emotionally inhibited, repressed, inaccessible.
- 999. No symptoms mentioned.

DISORDERED THOUGHT, INTELLECT, COGNITION

- 921. Loss of memory; major disorders of memory (including disorientation) (WHEN CLEAR-CUT; SEE ALSO CODE 56/3).
- 922. Intellectual retardation, lack of comprehension (SEE ALSO CODE 56/3).
- 923. Distracted, absent-minded; forgetful, unable to concentrate.
- 924. Brooding, preoccupied.
- 925. Obsessive, compulsive ("fanatic").

MNTLOTH and BRKDOTH

- 1001. Mentions having been "insane," psychotic personally.
- 1002. Mentions own mental illness in 656C, but can't classify into 1001,1003,1004
- 1003. Mentions being (having been) neurotic personally
- 1004. Mentions having had a nervous breakdown personally (including all such references in Q6)
- 1005. Mentions own emotional disturbance short of mental illness (DO NOT CODE IF 1001-1004 can be coded).
sometimes I fell I may be mentally ill myself; I get so mad I'm afraid I'm going crazy; I almost had a nervous breakdown myself; etc.

REFERENCE TO FAMILY, FRIENDS

- 1006. Mentions family members, friends having been "insane", psychotic. my sister is just coming out after two years (ie, any reference to institutionalization for mental illness is classified here); a friend of mine is in the state hospital, etc.
- 1007. Mentions family members, friends being (having been) mentally ill in 656C, but can't classify into 1006,1008,1010.
- 1008. Mentions family members, friends being (having been) neurotic.

- 1010. Mentions family members, friends having nervous breakdowns (including any references in Q6.)
- 1011. Mentions emotional disturbances of family members, friends short of mental illness.

DENIAL OF CONTACT, FAMILIARITY

- 1101. Denies personal contact with the “insane”, psychotic. I’ve never seen anyone who was insane, so I don’t know; I’ve never known anyone like that (in context of psychotic symptoms); etc.
- 1102. Denies personal contact with mentally ill in 656C, but can’t classify in to 1101, 1103, 1104. I ain’t seen anyone who was mentally ill; I’ve never been around a mentally ill person to any great extent; I’ve never seen on (in unclassifiable symptom context); etc
- 1103. Denies personal contact with the neurotic. I’ve never run into anyone who was really psychoneurotic; I’ve never know anyone like that (in the context of neurotic symptoms); etc.
- 1104. Denies personal contact with nervous breakdowns (including any such denial in Q6). I never say anyone with a nervous breakdown; etc.
- 1105. Denies personal contact with MI, not classifiable above.

GENERAL KNOWLEDGE CODES

- 1106. Denies general familiarity with insanity psychosis (DO NOT CODE IF 1 IS CODED). I don’t know much about the subject of insanity; etc.
- 1107. Denies general familiarity with mental illness in 656C, but can’t classify into 7,9,X (1106,1108,1109)
- 1108. Denies general familiarity with neurosis (DO NOT CODE IF 3 IS CODED)
- 1109. Denies general familiarity with nervous breakdowns, (including any such denial in 656A)
- 1110. Denies general familiarity with MI, not classifiable above

MISCELLANEOUS VIEWPOINTS

- 1201. References to sympathy, pity for the mentally-ill. I’m heart-sick for them; I feel awfully sorry for them; the first thing I would think of is my sorrow for them; it’s a pathetic affliction; etc.
- 1202. References to stigmatizing, avoiding the mentally ill. I’d feel sorry for one, but I’d rather not be around someone like that (code 1 also); etc.
- 1203. Reference to fear, shock, horror, distress over mental illness; it’s worse than other illnesses; it’s worse than physical illness; I hope it never happens to me; etc.
- 1204. Denial of stigmatizing mental illness. its just another type of sickness with no special stigma attached to it. I am more broad-minded than most and don’t look at it as a terrible thing; etc.
- 1205. References to concern for; seriousness, importance of problem of mental illness; I was going to mention this as most serious disease for I fell psychoneurosis is more serious, more of an ignored thing than anything else; its very serious, of course, and there should be as much done as possible to prevent it as well as to help it; I’m awfully interested in the subject to see what can be done for people like this; etc.
- 1206. References to relativeness of mental health (other than definitions in terms of deviant behavior or references to mental illness being of different degrees). who, after all, is completely sane? Everyone has some sort of neurotic tendencies; a perfectly normal person is very rare; we all have quirks and there is no definite line between those mentally ill and not;; etc
- 1207. References to (relative) undetectability of mental illness. this illness is almost unnoticeable; its hard to tell that they are mentally sick; there are cases where you are hardly able to detect that he was mentally ill, most cases you can’t tell that a person is insane, apart from the criminally insane; until you get to know a person closely any kind of mental illness is hard to detect except by a medical man trained in that line; you have to know them pretty well to know their ways; you’d never suspect it until they crack up unless you have studied in this field to make you recognize such a person; this illness is almost unnoticeable; etc.
- 1208. References to relative incurability of mental illness; it gives me a shock when I hear the term because I found out it is more or less incurable (code 3 also); I don’t think they have a cure for mentally sick people; mental illness is harder to treat than anything else’ it means a long slow process for recovery; usually it means that there is very little hope of recovery; etc.
- 1209. References to mental illness, generally, involving an organic base; it’s an illness of the brain; the part of their brain that helps them plan ahead has been injured or damaged; mental illness is a sickness, a disease, not something that happens from over-exertion like a nervous breakdown; etc.
- 1210. References to mental illness, generally, excluding illnesses with an organic basis; a whole range of symptomatic behavior where there is no identifiable organic cause are included in the term; etc.
- 1211. Use of colloquial terms—”crazy, bonkers, nuts, looney”
- 1212. Indicates knowledge that it is not socially desirable to stigmatize mentally ill (I shouldn’t feel this way, but...; thank goodness people are not more accepting of mental illness)
- 1213. References to other people, or most people, stigmatizing mentally ill
- 1214. They need help, they should be helped, etc.

 FREEDOM RECODE

(FREEMNS1-3, FREEEXP1-3)

Intent of Recode

To codify open ended responses by category or type of freedom, either in definition or experience, to allow for use in the context of research.

Method of Recode

Responses were assigned a number based on categories of freedom. FREEMNS1-3 is a recoded response to the main subject mentioned under the first free response question. FREEEXP1-3 is a recoded response to the main experiences mentioned under the second free response question.

FREEMNS1-3

WANT

1. Any variant of the positive statement "Doing what I want"

AUTONOMY

2. Self-realization, being different, self-control, etc.

CHOICES

3. Having choices, making decisions

RIGHTS

4. Includes religion and speech

MOVEMENT

5. Includes movement and travel

NEGATIVE

6. Not being a slave or a subordinate, subject to discrimination, or police or government harassment; no obligations (emphasis on negativity of statement)

CITIZEN

7. Political participation or rhetorical references to American traditions or "American Dream"

SECURITY

8. Economic security and independence, including having a good job, not being in debt, self-employment, etc

OTHER

- 9.

NO ANSWER/ DON'T KNOW

- 98.

FREEEXP1-3

MOVING

1. Includes movement, driving, and travel

LEISURE

2. Recreation, being in nature, enjoyable activity

SOCIAL

3. Social engagements and commitments including family, spouses, helping others; includes institutional commitments

NEGATIVE

4. No obligations, being alone, leaving family, moving out, being divorced, leaving institution; independence in a negative sense

INNER

5. Includes spiritual and religious freedoms

CHOICES

6. Variant of "making choices" or "doing what I want to do"

CITIZEN

7. Political participation, expressing one's views, simply being an American or comparing America with other nations

SECURITY

8. Economic security and independence, including having a good job, not being in debt, self-employment, owning own home, etc

OTHER

9.

NO ANSWER/DON'T KNOW

98.

Original Question

First open ended question: "The next questions are about freedom in America today. Freedom means many different things to people. When you think about freedom, what comes to mind? Can you tell me in a couple of sentences what freedom means to you? PROBE: Is there anything else that freedom means to you?"

Second open ended question: "What experiences in you life make you feel most free? PROBE AS NEEDED: Are there times in you life when you feel especially free? ASK IF NECESSARY: Can you give me an example of an experience that makes you feel really free?"

Spiritual Transformation Recodes

(ENTITY, EXPCHNG1-3 WHYCHNG1-3, CHANGED1-3)

The open-ended questions were coded into 10 variables. Information from any of the open-ended items were used to code each of the variables

A. Up to three mentions of what led to, caused, or triggered the religious/spiritual change

WHYCHNG1
WHYCHNG2
WHYCHNG3

B. Up to three mentions of occurrence or aspects of the religious/ spiritual change itself (not cause, not consequences)

EXPCHNG1
EXPCHNG2
EXPCHNG3

C. Up to three mentions of the consequences of the religious/ spiritual change, what was different about the person's life, attitude, beliefs, etc.

CHANGED1
CHANGED2
CHANGED3

D. One variable on specific religious figures mentioned

ENTITY

WHYCHNG1, 2, 3

- 1 Illness/hospitalization of R
- 2 Illness/hospitalization of other close to R
- 3 Accident of R
- 4 Accident of other close to R
- 5 Death of other close to R

CHANGED1, 2, 3

- 1 More religious, greater faith, closer to Christ, more committed to God
- 2 Religious view changed (not specified)
- 3 Belief in miracles
- 4 Thanked God for life, grateful to God
- 6 God will take care of R, solve problems, look out for R, will depend on God, God there for R
- 8 Changed churches/religions, converted
- 9 Prayed more
- 10 Bring God to others, being evangelical
- 11 Released from sin
- 12 Live life following God's rule, Christian way, walk with the Lord, follow Christ's teachings
- 13 Baptized
- 14 Church seen as family
- 15 Became more aware of power of prayer
- 18 More spiritual, not more religious
- 19 Loss of religion, loss of faith
- 20 Realized limited time, life is short, live every day as last
- 21 Live life to the fullest, get most out of life
- 22 Peace (internal)
- 23 Calmer
- 24 Better, nicer, kinder, more humble person
- 25 Helped others, gave to others, selflessness, compassion, empathized
- 26 Spend more time with people, cared more for others, more caring
- 27 Got married
- 28 Closer to spouse

- 29 Closer to children, dedicated to children, better parent
 30 Closer to family (spouse/children not specified)
 31 Volunteered more
 32 Raised children in faith, religion
 33 Specific positive changes
 34 Happier, more satisfied with life, feel better
 35 Stronger
 40 Changed directions, redirected life (not specified)
 41 Think about, look at life differently (not specified)
 45 Didn't take things for granted, appreciate things more, saw life as more valuable, saw every day as important
 46 Re-evaluated what R believed
 49 Gave up drinking, drugs
 50 Avoided nightclubs, bars, wild parties, dancing
 51 Better lifestyle, cleaner life (not specific)
 52 Settled down, slowed down, more careful
 53 More mature
 54 Second chance, new chance, chance to start over
 55 Gained hope
 56 Beloved, gained love
 57 Found unconditional, unlimited love
 58 Found value of forgiving
 59 Think about R's actions, behaviors, sins
 60 Life better, better off, enriched life
 61 Felt needed
 62 More self-confident, felt better about self, more aware of self
 63 More aware of self beliefs
 70 Life has purpose, meaning, makes sense, existential meaning gained, aware of ultimate truths/reality
 71 More alive, aware, engaged; not bored, in rut, passive
 72 Treat all the same, treated all mankind equally
 73 Be more careful
 74 Felt refreshed, renewed
 75 More open to new things and new ideas
 76 To think more
 77 Knew there was a heaven, eternity
 78 Made R aware of what R should be doing or should be like
 80 Negative changes
 82 More in touch with mortality and those who have died
 83 Upset with judgmental attitudes
 84 More conscious of church, religion; more aware of God
 85 More responsible, accepts responsibility
 87 Feeling changed
 88 Realized that no matter how bad things are, someone else has it worse
 89 Moved away from church, religion
 90 Everything changed, complete change, dramatic change, new person
 92 Realized there was real adversary (like Devil, evil)
 94 Some change, unclear if positive/negative, NOT as major as code 90
 95 No change, little change, temporary change, see codes 90, 94
 96 Nothing relevant mentioned
 98 Can't remember

ENTITY

- 1 God
 2 Christ, Jesus
 3 God and Christ/Jesus (both mentioned)

SCIENCE MODULE RECODE

(SCITEXT, EXPTEXT)

Intent of Recode

To codify open ended responses by general responses to science-related questions.

Method of Recode

Responses were assigned a number based on the respondents' understandings of science and the scientific method. SCITEXT is a recoded response to the first open-ended question on what it means to study something scientifically. EXPTEXT is a recoded response to the second open-ended question, which asked respondents to justify their response to a previous question on experimental design. Procedure for coding of STORMTXT and LITMSTXT was prepared by Jaqui C. Falkenheim from National Science Foundation.

SCITEXT

In analyses, the first three categories are considered to be correct, and are generally collapsed into a code "1" or "scientifically correct." The last three categories are considered to be incorrect, and are collapsed into a code of "0" or "incorrect" in analyses.

1. Formulation of Theories, Test Hypotheses – The top category includes some notion of theory or hypothesis. However, if the response is simply 'theory' or 'hypothesis' with no elaboration then the response is coded as a '5.'
2. Do Experiments, Control Group – This does not include theory, but mentions experiment or control group. Key words for a response to be placed in this category are 'control group,' 'experiment,' or 'controlled group.'
3. Rigorous, Systematic Comparison – This category understands scientific study as such things as being rigorous (repeated testing, over a long time), systematic (or orderly), unbiased, and replication. Responses mentioning the need for a 'controlled study' or 'controlled environment' will be classified here if they do not include additional information that would allow them to be categorized as a '1' or '2.'
4. Measurement – This category includes the notion of something done 'in a laboratory' or focuses on quantitative methods such as surveys or polls or gathering facts without additional information to allow them to be categorized in one of the above categories. Responses simply indicating 'testing' are coded here.
5. Classification – These responses focus on more vague forms of research such as 'investigate' or 'go to a library' or 'go in depth' or 'do research'.
6. Redundancies/Incorrect/Irrelevant – This category includes all incorrect responses as well as redundant responses that mention 'what scientists do' or 'the scientific method'.

First open-ended question:

A13b: In your own words, could you tell me what it means to study something scientifically?

F1 INSTRUCTION: IF R SAYS "DON'T KNOW" OR REFUSES, REPEAT THE QUESTION.

A13c: You just said [FILL RESPONSE FROM A13B]. Do you have anything to add to that?

EXPTEXT

1. Correct (500 get drug), Control Group – The response includes the words 'control group' or 'controlled group' or 'control sample.' A response that simply mentions 'control group' should be coded as a '1' unless the respondent elaborates incorrectly. This category also includes correct explanations of a control group through a description of those not getting drugs as 'a control.'
2. Correct (500 get drug), Vague Reason – The respondent understands the need for comparison but does not include other more specific responses that would result in the response being coded as '1.' This category includes implied comparisons as well (such comments as 'see the difference' or 'need to contrast' or 'need a baseline'). This category also includes detailed listings of other factors that might lower blood pressure (rather than drugs) implying the need for comparison.

3. Correct (500 get drug), Wrong Reason – This would include reasons about sample size (e.g. “the second way is better because fewer people would be hurt”) as well as other incorrect reasons. This category also includes respondents who simply rephrase the method that is being used (e.g., “Well the second has two groups and the first only has one group”). The category also includes a simple mention of a ‘double blind study’ without additional information to categorize it as a ‘1’ or a ‘2.’

4. Correct (500 get drug), Don’t Know

5. Wrong (1000 get drug), Reservations about Control Group – e.g., “It wouldn’t be fair to the 500 who didn’t get the drug if the drug helps their problem”

6. Wrong (1000 get drug), Reservations about Sample – e.g. “With 1000 people you get twice as many examples”

7. Wrong (1000 get drug), Other Reason

8. Wrong (1000 get drug), Don’t Know

Second open-ended question:

A14b: Why is it better to test the drug this way? (Refers to R’s response to EXPDESIGN)

F1 INSTRUCTION: IF R SAYS “DON’T KNOW” OR REFUSES, REPEAT THE QUESTION.

A14c: You just said [FILL RESPONSE FROM A14C]. Do you have anything to add to that?

STORMTEXT

Question 4: Lightning and thunder happen at the same time, but you see the lightning before you hear the thunder. Explain why this is so. [SELF-ADMINISTRATION CONDITION ONLY] Just enter your answer in the space below.

1. Complete: Respondent indicates that although the thunder and lightning occur at the same time, light travels faster than sound so the light gets to your eye before the sound reaches your ear. A complete response provides a correct explanation including the relative speeds at which light and sound travel.

For instance:

Light travels faster than sound

Sound waves are slower than light waves so you see then you hear the lightning and thunder

Sound travels slower than light

Light waves travel faster than sound waves

Lightening is light waves which travel at a much faster speed than the sound waves that make up the noise from thunder

Light is faster

Sound travels much slower than light so you see the light sooner at a distance

Thunder is a sound, lightning is visual. The speed of sound is less than the speed of light, so you see the light before you hear the sound.

because the sound waves are slower

2. Partial: Response addresses speed and uses terminology such as thunder for sound and lightning for light, or makes a general statement about speed but does not tell which is faster.

For instance:

Because the lightning is much faster than the thunder [this response addresses relative speed but lacks a comparison between the speeds of light and sound]

The sound of thunder takes time to travel [this response includes a reference to speed, but lacks a comparison between the speeds of light and sound]

One goes the speed of light and the other at the speed of sound [does not address the rate of speed]

differential in which sounds waves travel ... speed of sound

3. Unsatisfactory/Incorrect: Any response that does not relate or mention the faster speed of light or its equivalent, the slower speed of sound.

For instance:

You see it before you hear the sound

Light is first

Time

Lightening hits the ground first and then the thunder happens

Lightening happens faster

The atmosphere that the hot air coming over the cold air and the lightening comes

Because oh gosh I can't explain it I don't know, it has something to do with the speed of sound, x that's all I know

Lightening creates the difference in the air temperature which makes the boom

Because the storm was further out

Because it be raining

Because of static electricity

You hear... sound travels faster than the speed of light

thunder is the sound of light traveling at a certain speed, it is an after affect

The sound is based off the distance from where one is standing to the lighting strike

lighting is the electros that pushes the air apart and when it comes back together it goes bang

because it's the distance

something to do with the time, how far it is away

thunder is from air moving back in after the lightening

the time delay is because of the distance of the lightning

[8.] Don't know/don't recall/refuse to answer

Don't know

I can't recall

Refused

Left response in blank

[9.] Not asked

LITMSTXT

Question 5: A solution of hydrochloric acid (HCl) in water will turn blue litmus paper red. A solution of the base sodium hydroxide (NaOH) in water will turn red litmus paper blue. If the acid and base solutions are mixed in the right proportion, the resulting solution will cause neither red nor blue litmus paper to change color.

Explain why the litmus paper does not change color in the mixed solution. [SELF ADMINISTRATION CONDITION ONLY] Just enter your answer in the space below.

Correct: Responses must refer to neutralization or a chemical reaction that result in products that do not react with litmus paper. There are 3 categories that are correct (#1 through #3), one category partially correct (#4), and one incorrect (#5), then Don't know/refuse (#8), and Not asked (#9)

1) Response refers explicitly to the formation of water (and salt) from the neutralization reaction [The first 2 bullets are examples of correct responses from TIMMS]

Hydrochloric acid and sodium hydroxide will mix together to form water and salt, which is neutral

The hydrogen ions combine with the hydroxide ions to form water, so the litmus paper does not change color.

The litmus paper tests the concentration of h^+ ions or oh^- ions. When mixing the soluble HCl and the Na OH, the OH and H ions combine to form water, leaving no h^+ or oh^- for the paper to detect.

Acid and base neutralize each other and form salt NaCL

what is an acid an one is a base they cancel each other out and become water

2) Response refers to the neutralization (or equivalent) even if the specific reaction is not mentioned [The first 5 bullets are examples of correct responses from TIMMS]

When you mix acid and alkali, the mixture becomes neutral and has a pH of 7.
 The HCl neutralizes the NaOH, and the NaOH neutralizes the HCl
 The mixed solution is neutral, so litmus paper does not react
 Acid+base=neutral solution
 There is a neutralization reaction
 The right mix creates a neutral solution that is neither acidic nor base
 The chemical reaction that creates something which is neutral
 Mixing turns the solution neutral
 The acid is neutralized by the base, because the litmus paper detects acids or base, the solution is neutral
 The liquid is neutral
 It becomes neutral
 Because acid and base neutralize to a pH of 7
 The two chemicals combine to form molecules (H₂O and NaCl) that are neither acidic nor base.
 The acidic and base solutions neutralize each other
 The two solutions if properly mixed will not change the paper colors because they become neutral
 They neutralize each other, the acid and base neutralize each other
 Because the solution would be neutral as is the litmus paper
 Neutral solution
 Acid neutralizes base of pH
 Both chemicals neutralize each other
 Put an acid and base together it neutralizes it
 The solutions cancel each other out making it neutral
 Because acids neutralize bases, and the other way around

3) Response refers to a chemical reaction taking place (implicitly or explicitly) to form products that do not react with litmus paper (or similar), even if neutralization is not explicitly mentioned. [The first 3 bullets are examples of correct responses from TIMMS]

The acid and base react, and the new chemicals do not react with litmus paper
 The chemicals that change the litmus paper must have a chemical reaction to each other. Therefore they will not change the color of the paper anymore
 They form a new solution that has different properties and doesn't react with litmus
 The HCl and NaOH when mixed in the right property balance each other out and become a neutral solution which would not trigger the litmus paper change

4) Partially correct: Mentions only that acid and bases are "balanced," "opposites," "cancel each other," or only that it changes to a salt without mentioning neutralization reaction [Respondent remembers the concept but the terminology is less precise, or the answer is partial]

They balance each other out
 One solution will cancel out the effects of the other
 They are counter acting chemical reactions
 Because the pH is basically 7 meaning that it is water and water has no pH [first part is correct but 'water has no pH' is incorrect]
 Because there is a balance
 It changes it to a salt
 Because the two different solutions when combined together counter act each other
 Because the two are balanced
 Because the asset in base solution have offset each other [asset=acid?]
 Because the HCl and NaOH will balance each other
 They basically nullify one another
 There is a balance between the chemicals and this prevents the chemical reaction with the litmus paper.
 the items in the mixed solution cancel each other out
 acid and caustic mixed together make it neutral at the right mixture of both materials
 Because it is becoming a complete new chemical or the structure of the chemical has changed
 Ph balance
 I think because they cancel each other out and it is a neutral effect

3. Incorrect: Response does not mention any of the above in #1 through #4 and/or is too partial or incomplete, and/or uses terminology that is too imprecise.

For instance:

Because they are base solutions - the two bases mixed together there is no reaction
 There is no change. Both colors changing to the other
 Because its mixed the right way and it won't change it. and if you mix it the wrong way, it will change it
 Because of the acid
 No water added
 Because they neutralize the compound [experts at NSF indicate that the expression "neutralize the compound" is incorrect]
 Something about the acid
 It don't never turn green paper blue
 Because its balanced x thats it
 There is no ph difference
 It is not strong enough which will just give you wet paper
 Both are contacting each other
 Sound like acid! It just sounds like acid. x Well the water change very fast and when you mix two different there's a puff of smoke and you have to be very careful. to me it's just like making homemade acid
 Because it the acids are equal, so there's no reaction to change anything.
 because it was a bad batch of litmus paper
 Their offsetting
 you would have proper ph solution...nonacidic
 The two chemicals react in different ways when used by themselves, and in consecutive order. They form a separate chemical and react differently when combined together.
 A reaction between the two papers
 Because the solution is alkaline neutral

ETHNICITY RECODE

(ETH1-3, ETHNUM, SPETHNIC, SPETH1-3, SPETHNUM)

Intent of Recode

The ethnicity data, as originally collected, represent responses to two separate questions. One set of columns was used if the respondent was able to name one country of ancestral origin, and a different set was used if the respondent named more than one and chose one of them. If the respondent named more than one but was unable to choose between them, no summary ancestral origin was assigned. The question was recoded for two reasons: the data format was potentially cumbersome, and it was anticipated that some users would be interested in summary ancestral identification regardless of the method used to obtain that information. Therefore, summary ancestry and method of response were recoded as two separate variables. The first two columns contain country of ancestry if provided, the next six columns the first, second, and third ethnicity mentioned (if any mention) and the ninth column describes the conditions under which ancestry was given; i.e., volunteered as a first choice, given in response to a forced choice question, or not provided at all. Spouse's ethnicity is coded in a similar fashion.

Method of Recode

If only one country was provided as the country of ancestry, that country was listed as summary ethnicity in the first two columns, and the method of response, "names only one country," was coded as 1 in the third column. If the respondent named more than one country, he was asked to choose between them. The country chosen was considered the ethnicity, and the method of response, "names two or more countries and chooses one," was coded as 2. If more than one country was named and the respondent was unable to choose between them, no country was assigned as summary ethnicity, and "names two or more countries but can't choose" was coded as 3. If the respondent was unable to list any countries, no summary ethnicity was assigned and the method of response, "unable to name countries," was coded as 4.

HISPANIC RECODE

(HISPANIC)

Intent of Recode

This variable combines two questions intended to address the Hispanic-ethnic heritage of all survey respondents. In line with the 2000 Census, this question was asked before the race questions to reduce the number of respondents replying "Hispanic" to their race.

Method of Recode

The filter question was asked of all respondents. Respondents who answered "no" to the filter question were automatically coded 1 on HISPANIC. Respondents who answered "yes" to the filter were given a hand card and asked the follow-up question. The hand card offered four options: 1) Mexican, Mexican American, Chicano/Chicana; 2) Puerto Rican; 3) Cuban; 4) Other Hispanic, please specify. Closed responses were coded accordingly. Open responses were tallied and appear in the final variable.

To reconcile inconsistencies of response and to give further information, HISPANIC was checked against race and ethnicity variables. If an ethnicity variable provided more information than the questions here, HISPANIC was updated accordingly.

WORK SCHEDULE RECODE

(WORKDY, SPDAYS)

Intent of Recode

This question was included in the questionnaire by the NORC Sampling Department as a check on sample representativeness. Although collected for this purpose, we thought the information might be of interest to some users. Since the original seven-column code was too cumbersome for analytic purposes, the information was recoded, concentrating on the distinction between those working a regular week and those working mainly weekends.

Method of Recode

The work pattern of each respondent who worked full-time (35 hours or more) was examined and the pattern was recoded according to the following categories: a regular Monday through Friday week; a Monday through Friday plus Saturday or Sunday week; mainly weekends; or a week without a set schedule.

Original Question

VOCABULARY TEST

(WORDA-J, WORDSUM)

Intent of Recode

A ten-item word test was administered to respondents; as indicated in the previous usage appendix, the ten items were selected from the twenty-item Gallup-Thorndike verbal intelligence Form A. This test, developed by R.L. Thorndike and Irving Lorge for use in survey research, appeared on Gallup surveys of the early 1940's. Reliability coefficients range from .80 to .85.

To minimize the admittedly small possibility that some form of publicity would affect the public's knowledge of the words included in the test, they are not reported here.

Method of Recode

For each of the ten words, there were five words (meanings) from which the respondent could choose. Each answer was scored as correct or incorrect, and the number of correct responses was summed. Respondents who did not attempt the test or who did not attempt a particular item are coded "9", No Answer.

WORDSUM provides the total number of words correct. Respondents who declined to guess on any of the words were given a score of "99".

Original Question

The original question had ten words appearing in a format identical to that of the example—Beast.

ASTROLOGICAL SIGN RECODE

(ZODIAC)

Intent of Recode

For users interested in examining astrological properties, birth date was recoded into the twelve signs of the zodiac.

Method of Recode

Birth date was mapped according to the following recode.

<u>Birth Date</u>	<u>Sign</u>
March 21 - April 19	Aries
April 20 - May 20	Taurus
May 21 - June 21	Gemini
June 22 - July 22	Cancer

This appendix contains three five-digit occupational classifications. In the first classification, the first three digits are the 1970 U.S. Census occupational codes, and the last two digits are the Hodge-Siegel-Rossi Prestige Scores. In the second classification the first three digits are the 1980 U.S. Census occupational codes and the last two digits are the NORC/GSS prestige scores. The third uses 2010 U.S. Census occupational codes.

The U.S. Census Bureau has assigned a three-digit number code to each occupational title. A listing of codes pertinent to this study was taken from an index of approximately 23,000 occupational titles. These codes appear under the column headed "Punch, Occupation." For further detail, see U.S. Bureau of the Census, 1970 Census of Population, Alphabetical Index of Industries and Occupations, Washington, U.S. Government Printing Office, 1971; U.S. Bureau of the Census, 1970 Census of Population, Classified Index of Industries and Occupations, Washington, U.S. Government Printing Office, 1971.; 1980 Census of Population, Alphabetical Index of Industries and Occupations, Washington, U.S. Government Printing Office, 1981; U.S. Bureau of the Census, 1980 Census of Population, Classified Index of Industries and Occupations, Washington, U.S. Government Printing Office, 1981; and U.S. Bureau of the Census Census 2010 Occupation Index, Washington, U.S. Government Printing Office, 2011.

The frequencies for each occupational classification are listed in this appendix for the respondent, the respondent's father, the respondent's spouse, and the respondent's mother.

Prestige

The prestige scores assigned to occupations in this study were taken from rating systems developed at NORC in 1963-1965 in a project on occupation prestige directed by Robert W. Hodge, Paul S. Siegel, and Peter H. Rossi and updated on the 1989 GSS. The 1989 update scale was prepared by Robert W. Hodge, Judith Treas, and Keiko Nakao. This concept of prestige is defined as the respondents' estimation of the social standing of occupations. The prestige scores in the Hodge-Siegel-Rossi and GSS studies were generated by asking respondents to estimate the social standing of occupations via a nine-step ladder, printed on cardboard and presented to the respondent.

The boxes on the ladder were numbered 1-9 from bottom to top. In addition, the first, fifth, and ninth boxes were labeled "bottom," "middle," and "top," respectively. The occupational titles were printed on small cards and the occupational prestige ratings were collected by requesting respondents to sort the cards into boxes formed by the rungs of the ladder. [P. 35.]¹

Significance testing between two prestige scores, or among a group of scores, requires knowledge about the standard errors. Since there is a different standard error term for each pair of scores, Siegel has provided a few values which are likely to exceed most actual standard errors. For more detail on standard error, sources of the prestige scores, and the method of translating the respondents' rankings into a standardized metric system, see Siegel, Prestige in the American Occupational Structure.

1970

The prestige score was originally designed for use with the 1960 U.S. Census occupational codes and has been adapted to the 1970 listing as follows:

- 1) If the occupation was a new one assigned to a previously existing subdivision (e.g., Engineers within the major category "Professional, Technical, and Kindred Workers"), it received the prestige score for the general n.e.c.² category of that subdivision.
- 2) If the occupation was grouped with a like occupation in 1960 but divided from it in 1970, both occupations received the same 1960 prestige score.
- 3) If this occupation was completely new to the list and was not assigned to an existing subdivision, it received the prestige score of the n.e.c. category for the major occupational division.

All adaptations are marked with a "*" next to the occupational classifications. (See Appendix F.)

- 4) The craft score was used for apprentices when the craft score was less than 41. If the craft score was greater than 41, the apprentice score of 41 was used.

For an alternative means of assigning prestige codes to 1970 Census categories see Robert M. Hauser and David L. Featherman, The Process of Stratification: Trends and Analysis. New York: Academic Press, 1977.

1980

In 1989 General Social Survey replicated and extended the earlier Hodge-Siegel-Rossi ratings of occupational prestige. The prestige module was designed by the late Robert W. Hodge, Judith Treas and Keiko Nakao in consultation with Smith and Davis. Hodge died in February, 1989 during data collection. Analysis of the data and construction of the NORC/GSS Occupational Prestige Scale was carried out by Nakao and Treas. Their work was supported by NSF. The GSS Board of Overseers Sub-Committee on Occupational Prestige provided advice and guidance to both sets of PIs. Committee members included Richard Campbell, Robert Hauser, Patricia Roos, Paul Siegel, Joe Spaeth, and Andrea Tyree.

The occupational prestige module and the NORC/GSS Occupational Prestige Scale are discussed in detail in GSS Methodological Reports No. 69 and 70.³ The NORC/GSS Occupational Prestige scores for the 1980 Census Occupational Classification are given in Appendix F. A machine-readable file that lists prestige score, occupational code, and title of occupational categories is available from ICPSR. A raw data file and SPSS-X control cards that contain the raw prestige ratings that respondents assigned to occupational titles (and not the summary prestige scores for the 1980 Census Occupational Classification) is also available from ICPSR. This file is called "Ratings of Occupational Prestige on the 1989 General Social Survey."

2010

In 2012, the General Social Survey panel re-interviews replicated the Treas and Nakao ratings of occupational prestige. The prestige module was updated by Michael Hout, Tom W. Smith, and Peter Marsden. The results of this update were analyzed, and used to construct the 2010 Occupational Prestige Scale. The 2010 Occupational Prestige scale comes in two different forms. The first, -PRES10, functions similarly to the corresponding scales from previous Occupational Prestige scales. The second, -PRES105PLUS, is based on the percentage of respondents who placed the occupation in or above the 5th of 9 ratings. The effect of individual raters is also removed in this form, via hierarchical linear modeling techniques.

Please consult GSS Methodological Report Nos. 122 and 124⁴ for details on how the Occupational Prestige Scale was constructed. Several substantive changes were made to which occupations were included from the 1989 scale, as well as various aspects of the interview protocol. The NORC/GSS Occupational Prestige Scores for the 2010 Census Occupation Classifications are given in Appendix F, pp. 3250-3258.

SEI

SEI scores were originally calculated by Otis Dudley Duncan based on NORC's 1947 North-Hatt prestige study and the 1950 U.S. Census. Duncan regressed prestige scores for 45 occupational titles on education and income to produce weights that would predict prestige. This algorithm was then used to calculate SEI scores for all occupational categories employed in the 1950 Census classification of occupations. Similar procedures have been used to produce SEI scores based on later NORC prestige studies and censuses.

The GSS contains several sets of SEI scores. They all used procedures similar to those employed by Duncan. For cases coded according to the 1970 US Census codes there are SEI scores developed by Lloyd V. Temme (See Appendix G). These exist for respondent (DOTPRES), spouse (SPDOTPRE), and father (PADOTPRE). For cases coded according to the 1980 US Census codes there are SEI scores developed by Nakao and Treas as part of the GSS's 1989 occupational prestige study (see above). These exist for respondent (SEI), respondent's first occupation (FIRSTSEI), father (PASEI), mother (MASEI), and spouse (SPSEI). These scores are discussed in GSS Methodological Report No. 74.⁵

In 2012, the GSS added three new SEI scores for respondent (SEI10, SEI10EDUC, and SEI10INC), father (PASEI10, etc.), mother (MASEI10, etc.), spouse (SPSEI10, etc.), and/or cohabitating partner (COSEI10, etc.). The SEI10 scores are constructed similarly to the original SEI scores, only based on the 2010 Occupational Prestige instead of the 1989 GSS Occupational Prestige. Specifically, the SEI10 variables utilize the modified PRESTG105PLUS, rather than PRESTG10. Both SEI10EDUC and SEI10INC, as well as other variables for respondent's father, mother, spouse and/or cohabitating partner, utilized data collected from the 2010 through 2012 American Community Survey. The 2010 ACS was the first that used the 2010 Standard Occupational Classification,

which serves as the basis for the OCC10 codes, and thus also for SEI10. Percentages of ACS respondents with some college or more education (for -10EDUC) and with \$45,000+ in annual income (for -10INC) were calculated for each occupation, and then used in combination with SEI10 to calculate SEI10EDUC and SEI10INC respectively. This appendix contains three three-digit industrial classifications. The U.S. Bureau of the Census has assigned a three-digit number code to each occupation. The listing of codes pertinent to this study was taken from an index of approximately 19,000 industry titles. These codes appear under the column headed "Punch, Industry Code." For further detail, see U.S. Bureau of the Census, 1970 Census of Population, Classified Index of Industries and Occupations, Washington, U.S. Government Printing Office, 1971; U.S. Bureau of the Census, 1980 Census of Population, Classified Index of Industries and Occupations, Washington, U.S. Government Printing Office, 1981; and 2007 NAICS/Census Industrial Classification Codes used for 2012+.

APPENDIX I:

INTERNATIONAL STANDARD CLASSIFICATION OF OCCUPATIONS

(ISCO68, PAISCO68, SPISCO68, ISCO681, PAISC681, MAISC681, SPISC681, ISCO88, PAISCO88, MAISCO88, SPISCO88, ISOC08, PAISCO08, SPISCO08, MAISCO08, COISCO08)

This appendix contains recodes of the 1970 and 1980 Census Classification of Occupations (See Appendix F) into the 1968 International Standard Classification of Occupations (ISCO) and the 1980 Census Classification of Occupations into the 1988 ISCO. The first table converts 1970 Census occupation codes into 1968 ISCO codes, the second table converts 1980 Census occupation codes into 1968 ISCO codes and the third table converts the 1980 Census into 1988 ISCO codes. The conversion schemes were developed by Harry B. G. Ganzeboom at Nijmegen University, the Netherlands. In 2014 a new conversion scheme for the 2010 Census Classification of Occupations and the 2008 ISCO codes was developed by GSS staff. Additionally, in the summer of 2016, all previous years of the GSS were brought up to date with 2010 Census Classification of Occupation codes, allowing for the ISCO08 codes to be applied to all cases from 1972-2012. As a result, the ISCO08 codes include some non-standard top-level codings (e.g. the use of 2300, Teaching Professionals, when a distinction between 2310, 2320, 2341, etc. could not be determined).

All of the tables included in this Appendix include all valid ISCO codes for their year, regardless of whether or not a similar code exists or is expected in the Census Classification of Occupations. For example, Census codes currently cannot capture ISCO08 code 1113 – Traditional Chiefs and Heads of Villages. There are similar problems among higher categories (e.g. Census codes cannot correspond to any of the 6300s, Subsistence Farmers, Fishers, Hunters and Gatherers).

DOT VARIABLES

(DOTDATA, DOTPEOP, DOTTHNG, DOTGED, DOTSV, DOTPRES, SPDOTDAT, SPDOTPEO, SPDOTTHN, SPDOTGED, SPDOTSV, SPDOTPRE, PADOTDAT, PADOTPEO, PADOTTHN, PADOTGED, PADOTSV, PADOTPRE)

The third edition of the Dictionary of Occupational Titles (1965) provides a six-digit (expanded to nine digits in 1967) occupational classification code which is more detailed and more clearly oriented to the task content of jobs than the Census occupational codes. The DOT (Dictionary of Occupational Titles) also includes six worker trait components, which are estimated abilities and individual characteristics required of workers for successful performance in general types of jobs.

The DOT variables for the General Social Survey were provided by Lloyd V. Temme. Using data from the April, 1971 Current Population Survey (CPS) which were coded with both the detailed Census and DOT occupation codes, Temme summed and averaged all respondents' DOT scores within each detailed Census category. By applying the CPS weights for each case, Temme was able to create weighted average DOT data scores for each Census occupation which are representative of the national population. Scores were created in this way for five DOT variables: Data, People, and Things (the fourth through the sixth digits of the detailed DOT occupation code), and the two parts of worker traits for training time (General Educational Development and Specific Vocational Preparation). These five variables are the only DOT variables available for the General Social Surveys.

Also provided is a prestige variable that Temme generated from Siegel gathered data (See Appendix G) using procedures developed by Otis D. Duncan for his Socioeconomic Index (SEI).

A detailed account of both the DOT variables and of the actual procedures followed in deriving the weighted average DOT scores is given in Lloyd Temme's Occupation: Meanings and Measures (Washington, D.C., Bureau of Social Science Research, 1975).

All of these variables are interval level. DOTDATA, DOTPEOP, DOTTHNG, DOTGED, DOTSV and PADOTDAT, PADOTPEO, PADOTTHN, PADOTGED, PADOTSV are four digits long. The first digit is a zero, and a decimal point should be read between the second and third digits. DOTPRES, SPDOTPRE, and PADOTPRE are three digits long and a decimal point belongs between the second and third digits. Since these variables are continuous, complete marginals are not given. Since these variables are assigned to 1970 Census Occupational codes, they are not created in years that the 1970 codes were not utilized.

CHANGES IN QUESTION WORDING, RESPONSE
CATEGORIES, AND FORMAT

It is the general policy of the General Social Survey to exactly replicate questions over time. In certain instances, by design—and in other cases by accident—wordings, response categories, skip patterns, or formats have changed across surveys. This appendix documents the alterations that have occurred and, when applicable, the necessary reconciliations that were made. See Appendix T, GSS Methodological Reports Nos. 55 and 56.

Question
Mnemonics

Changes

WRKSTAT, HRS1, HRS2,
EVWORK, SPWRKSTA
SPHRS1, SPHRS2,
SPEVWORK

In the 1972 survey, the first unread response was "Working full time (35 hours or more)" and the second response was "Working part time (1 to 34 hours)." Since 1972, the hour references were dropped.

OCC, PRESTIGE,
WRKSLF, WRKGOVT
COMMUTE, INDUSTRY

In 1982 and 1983, it read "(do you/did you) normally do."

SPOCC, SPPRES,

In the 1972, 1973, 1975, 1977, 1978, 1983 and 1984 surveys, part A read "(does [spouse] SPWRKSLF, SPIND (did[spouse] normally)." In 1974, it was "(does [spouse] usually)." In 1976, 1980, 1982, and 1985+, it was "(does/did) your [spouse] normally."

PAOCC16, PAPRES16
PAWRKSLF, PAIND16

The wording for the first two surveys (1972-73) was "What kind of work did your father (FATHER SUBSTITUTE) normally do?" In the following surveys (1974-78, 1980, 1982+), it was "What kind of work did your father (FATHER SUBSTITUTE) normally do while you were growing up?"

SIBS

In the 1976 survey, the word "please" preceded "count" at the start of the second sentence. In the 1972, 1973, 1974, 1975, and 1977+ surveys, "please" was not used. In 1972, 7 means 7 or more siblings.

TAXRICH

In the 1996 survey, respondents were asked:

Generally, how would you describe taxes in America today...

Again, we mean all taxes together, including social security, income tax, sales tax, and all the rest.

First, for those with high incomes, are taxes...

PLEASE CHECK ONE BOX ONLY

...much too high,

too high,

about right

too low

or, are they much too low?

Can't chose

In 2006, the wording was changed to:

Generally, how would you describe taxes in America today? (We mean all taxes together, including wage deductions, income tax, taxes on goods and services and all the rest.)

First, for those with high incomes, are taxes...**TAXRICH**

(Would you say...)

...much too high
too high
about right
too low, or
are they much too low?

In 2008, the wording was changed to:

Generally, how would you describe taxes in America today, meaning all taxes together, such as social security, income tax, sales tax, and all the rest: First, for those with high incomes? Would you say...

TAXRICH

Too low, or
Much too low?
DON'T KNOW
REFUSED

AGE In the 1972-75 surveys, age was recorded from the question "In what year were you born?" In 1976+, it was coded from "What is your date of birth?"

EDUC, PAEDUC
MAEDUC, SPEDUC
DEGREE, PADEG, MADEG
SPDEG In the 1972-74 surveys, those answering 11th or 12th grade to the introductory question were asked "Did you ever get a high school diploma?" In the 1975-78, 1980, 1982+ surveys, those who finished at least the 9th grade were asked part A: "Did you get a high school diploma or a GED certificate?" In the 1972-74 surveys, part B asked "Did you complete one or more years of college for credit?"

In the 1975-84, the phrase "... not including schooling such as business college, technical or vocational school" was appended. In the 1972, 1975-78, 1980, 1982+ surveys, part B1 inquired "How many years did you complete?" In the 1973-74 surveys, "--not including schooling such as business college, technical or vocational school" followed. In the 1972-73 surveys, part B3 asked "What degree?" and the unread responses were Jr. College, Bachelor's, and Graduate. In the 1974 survey, the first response was changed to "Junior College." In the 1975 survey, the question became "What degree or degrees?" This wording was also used in the 1976-78, 1980, 1982+ surveys, but the first response was changed to "Associate/Junior College." In 1972 and 1973, high levels of No Answers occurred on DEGREE, PADEG, MADEG, and SPDEG. This was corrected in 1974 by a reformatting of the physical layout of the items.

MAEDUC, MADEG

In 1991, an error on a skip instruction on Ballot B meant that a number of respondents were not asked mother's education.

SEX

Due to nonresponse, FP samples under represent males (SEX) (See GSS Methodological Report No. 9). The degree of the under representation is exaggerated when the raw data rather than data weighted for number of adults in the household are employed (Stephenson, 1978). Since NORC's BQ sample places a quota on gender, males are not under represented, but match the level set by the quota (See GSS Methodological Report No. 7). Census/CPS figures show virtually no changes in the gender distribution of adults over this period (e.g. 1970 = 47.5% male; 1980 = 47.6; 1984 = 47.7). Separate time series for gender are presented for the BQ (SEXBQ) and FP (SEXFP) samples.

RACE

The increased proportion other since 1982 is largely due to a tendency to classify Hispanics as a distinct race.

FAMILY16, FAMDIF16

The unread response categories of the family situation question were changed between the 1972 and 1973+ surveys as follows:

In the 1972-74 and 1976 surveys, the following question was used to determine household composition:

- A. How many persons altogether live here, related to you or not? Please include any persons who usually live here but are away temporarily—on business, on vacation, or in a general hospital—and all babies and small children. Do not include—college students who are living away at college, persons stationed away from here in the Armed Forces, or persons away in institutions. (Don't forget to include yourself in the total.)

- B. How many of these persons are babies or children under 6 years old? UNDER 6 YEARS:
- C. How many are children age 6 thru 12? 6-12 YEARS:
- D. How many are teenagers 13 thru 17? 13-17 YEARS:
- E. And how many are persons 18 and over? 18+ YEARS:

CHECK ANSWERS WITH RESPONDENT.

In the 1975 and 1982+ surveys, household composition was determined from household enumeration questions used in full probability samples. They were:

- 2) Please tell me the names of the people who usually live in this household?
- 3) Have we forgotten anyone—such as babies or small children; roomers; people who usually live here but are away temporarily, on business trips, vacations, [82: at school,] temporarily in the hospital, and so on?
- 7) How old was (HEAD/PERSON) on (his/her) last birthday?
- 9) Are any of the people we have listed staying somewhere else right now?

IF YES:

- 10) Who is staying somewhere else right now?
- 11) Where is (PERSON) living right now: is (PERSON) staying at another household; is (he/she) traveling; is (he/she) in some institution or dormitory—like at college, or in a hospital or somewhere; or what?
-

UNRELATE

In the 1972-74 and 1976 surveys, relation of household members to respondent was asked as follows:

Is everyone in the household related to you in some way?

Yes	1
No ... (ASK A)	2

A. IF NO: How many persons in the household are not related to you in any way

In the 1975 survey, relationship was determined from the following question from the household enumeration questions:

5) What is (PERSON'S) relationship to (HEAD OF HOUSEHOLD)?

In the 1977+ surveys, relationship was asked as follows:

Now I would like you to think about the people who live in this household. Please include any persons who usually live here but are away temporarily—on business, on vacation, or in a general hospital -and include all babies and small children. Do not include college students who are living away at college, persons stationed away from here in the Armed Forces, or persons away in institutions.

INCOME16

In order to avoid bunching in a few income groups, the response categories were revised between 1972 and 1973, 1976 and 1977, 1980 and 1982, 1985 and 1986, 1990 and 1991, and 1996 and 1998. Each of these three groupings are treated as a separate question and variable.

RINCOME, INCOME72,
RINCOM82

In 1975, 1976, 1980, 1982+, "occupation" appeared in the parentheses. In 1974 and 1977, "job" was used. In 1978, "occupation" was used first and "job" second.

XNORCSIZ, SRCBELT
SIZE

The size of place variables were reevaluated in 1978 and standard conventions were used to code all years. Cases from the 1980 frame used 1980 Census figures.

PARTYID

The skip pattern within PARTYID varied over the years. In the 1972-74 surveys, those responding Republicans or Democrats were asked Part A, those answering Independent were asked part B, and those giving Other were asked the next question. In 1975, 1977-78, 1980, 1982+, those answering Other and the new response, No preference, were asked part B. In the 1976 survey, those answering Other and No preference were asked the next question. In the 1975 survey, the following underlined articles were used: "a Republican, a Democrat, an Independent." In the 1972, 1973, 1974, 1976, 1977, 1978, 1980, 1982+ surveys, no articles were used.

The appearance of 10 DK cases in 1975 suggests that a different coding and recording scheme was used in 1975 than in other years.

VOTE68, PRES68 IF68WHO, VOTE72	On VOTE68 in 1972 and 1973 and on VOTE72 in 1973, 1974, and 1975, "ineligible" (Punch 3) was a precoded category that included volunteered responses only. On VOTE72 in 1976 and 1977 and on VOTE76 in 1977, 1978, 1980, and 1982, "ineligible" (Punch 3) included volunteered responses plus respondents who had not turned 18 by election day in 1972 (for VOTE72) or in 1976 (VOTE76). Note that in initial versions of the 1977 and 1978 surveys, VOTE72 in 1977 and VOTE76 in 1977 and 1978 "ineligible" (Punch 3) included volunteered responses plus respondents who had not turned <u>17</u> by the appropriate election day. PRES72, IF72WHO, PRES76, IF76WHO were adjusted accordingly.
VOTE72, PRES72, IF72WHO	In the 1973-74 surveys, "Refused," (Punch 4)" was not precoded but was coded from verbatim responses. In the 1975 survey, "Did not vote for President," punch "5," was a precoded response. In the 1976-77 surveys, coding specifications called for coding verbatim responses as "wouldn't vote." (Punch 5.)" In general, codes "4" and "5" can be considered as equivalent codes across surveys. In 1978, response "8" was "Don't know/Can't remember."
NATSPAC, NATENVIR NATHEAL, NATCITY, NATCRIME, NATDRUG NATEDUC, NATRACE NATARMS, NATAID, NATFARE, NATROAD, NATSOC, NATMASS NATPARK, NATCHLD, NATSCI	The first spending area was "Space Exploration Program" in 1973-76 and "The Space Exploration Program" in 1977+.
NATRACEZ	In 1977, the phrase "(Negroes/Blacks)" was used.
TAX	Response "R pays no income tax" (Punch 4) was not employed on the 1980 survey.
SPKATH	The 1976 survey used "community" alone.
SPKCOM, COLCOM LIBCOM	In 1980, "was" was used instead of "is." In 1982 and 1983, "would" was used instead of "should."
CAPPUN2, CAPPUN	The capital punishment question was reworded between the 1973 and 1974 surveys.
GUNLAW	In the 1974, 1975, and 1977 surveys, "get" was used instead of "obtain."
RUSSIA, JAPAN ENGLAND, CANADA BRAZIL, CHINA, ISRAEL EGYPT	In the 1974, 1975, 1977, 1982 surveys, 10 boxes are vertically arranged with a gap between the pluses and minuses. Only numbers with positive and negative signs are displayed with no countries, labels, or "don't know" categories are provided. In the 1983 survey, 10 lines are arranged vertically with no gap between the pluses and minuses. Countries are not listed and no "don't know" category is indicated. The endpoints are labeled "Like very much" and "Dislike very much." In the 1985 and 1986 surveys, 10 boxes are arranged horizontally with no gap between pluses and minuses. Countries and a don't know category are indicated in writing. The endpoints are labeled "Like very much" and "Dislike very much." In the 1988 and 1989 surveys, 10 lines are arranged vertically with no gap between the pluses and minuses. Countries are represented by one column each. In this case, numbers, positive and negative signs, punch codes, and a "don't know" category are all indicated.
RELIG, DENOM, JEW	In the 1972 survey, codes for Other Protestant denominations were slightly different than the post

FUND, 1972 codes. To reconcile these differences the following recodes were made:

<u>1972</u> <u>Code</u>	<u>1973+</u> <u>Codes</u>	<u>1972</u> <u>Code</u>	<u>1973+</u> <u>Codes</u>
11 =	77	55 =	20
21 =	20	57 =	97
32 =	09	62 =	63
34 =	20	63 =	75
38 =	63	66 =	19
39 =	36	67 =	43
50 =	12	73 =	74
52 =	68	75 =	71

Since 1984, a more refined list of Protestant denominations has been employed. Items coded simply as Baptist, Lutheran, Methodist, or Presbyterian in 1972-1983 were coded into the "Don't know which" categories, respectively 18, 38, 28, and 48.

PRAY

While wording, interviewer specifications, and coding instructions were unchanged up to 2004 on the frequency of prayer question (PRAY), it appears that more "Nevers" were identified and coded in 1983 than in subsequent years. This might have been due to more emphasis in interviewer training or greater care by the coding supervisor. The collapsing of "Never" with "Less than Once a Week" should create a more comparable time series. In 2004, "Never" is added as a precoded category. There is an increase in the number of "Never" due to this format.

GRACE

The item on feeling close to "a powerful, spiritual force that seemed to lift you out of yourself" (GRACE) was originally part of a five-item, paranormal scale. When asked alone in 1983, it appeared to deviate notably from the previous reading. The replication of the entire scale in 1984 produced GRACE readings comparable to the previous observation, suggesting that a context effect was operating (See GSS Methodological Report No. 30). Because of this apparent effect, only the data points using the entire scale are compared across time.

The switch from the 1970 sample frame to the 1980 sample frame added a primary sampling unit (PSU) in Utah. This significantly increased the number of Mormons in the sample. A Utah PSU was also part of the 1960 frame used in the 1972 survey, and this accounts for the higher proportion Mormon in that year.

Sampling groups with unique (or very limited) geographic representations presents special problems for multi-stage samples utilizing geographical clustering. Take, for example, the problem of representing Topekans. Either Topeka is not a primary sampling unit (PSU) and thus Topekans are completely unrepresented, or Topeka is a PSU and Topekans are over-represented. (The inclusion of a locality in a multi-stage, area probability sample does not guarantee that it will be over-represented, since areas could make up the same share of the sample as they do the universe. However, this would be the exception rather than the rule, since areas are designed not to represent themselves, but classes of areas like themselves.) In the case of Topeka, it makes up 0.05% of the national population, but in the multi-stage sample used by the GSS, it would account for about 1% of the sample. (The NORC sample frame is described in Appendix A.) We do not worry about the actual coverage of Topekans, since for most purposes we do not consider them a sociologically meaningful or distinct group. If not in the sample, they are in some sense represented by "similar" Omahans, Lincolmites, or Wichitans. But certain sociologically significant groups are heavily geographically clustered in limited areas (e.g. the Mormons in Utah; Aleuts in Alaska; Cajuns in Southern Louisiana; Lumbees in Robeson County, North Carolina; Gullah speakers on the Sea Island; etc.) Though these groups all have an equal probability of being represented in a multi-stage, area probability sample, as unique groups they will tend to be either under represented or over-represented. (e.g. the 1980 sample frame "hits" the Mormons, Cajuns, and Lumbees and "misses" the Aleuts and the Gullahs.)

Fundamentalism/liberalism codes are assigned to denominations using the most detail applicable code of religious affiliation (RELIG, DENOM, OTHER, etc.). With the refinement of the major denomination codes (DENOM, etc.) in 1984 [see note for RELIG], the fundamentalism/liberalism assignment procedure also changed. By using the pre-1984 major denomination categories, the fundamentalism/liberalism codes can be assigned in the same manner across all years. For details on the fundamentalism/liberalism codes, see GSS Methodological Report No. 43.

RACPRES

Until 1978, RACMAR, RADIN, RACPUSH, RACSEG, RACOPEN, RACLIVE, RACINTEG, RACHOME, RACFEW, RACHAF, RACMOST, and RACPRES were asked of non-blacks only. Since 1978, they have been asked of all respondents. RACDIN, RACOPEN, RACLIVE, RACCLOS, RACDIS, RACHOME, and RACFEW were asked in terms of opposite race. RACMAR, RACMAR10, RACSEG, and RACINTEG were asked in reference to blacks as given.

Surveys prior to 1993 used the phrase "Negro/Black" or "Negroes/Blacks." Since 1993, the questions wording has been "Black/African-American" and "Blacks/African-Americans."

RACPUSH, RACSEG	In the 1972-73 surveys, "Negro" was used instead of "(Negro/Black)." In the 1973 survey, the lead was "I'm going to read some opinions other people have expressed in connection with Negro-White relations. Please tell me which statement on this card comes closest to how you yourself feel about each one of these opinions." In the 1975 survey, the lead was "Here is an opinion other people have expressed in connection with (Negro/Black)-White relations. Please tell me which statement on this card comes closest to how you, yourself feel about it." The phrase "The first one is ..." is used in years that both parts are asked (1972, 1976, 1977, 1978, 1980, 1982, 1984, 1985).
RACOPEN	In the 1976 survey, the B option was refusing "to sell to someone because of his race or color." In 1973, 1975, 1978, 1980 and 1983+, the word "their" was used instead of "his." In the 1973, 1975, and 1976 surveys, this question was asked of whites only. In the 1978, 1980, 1983, 1984 and 1986 surveys, this was asked of both races. In 1973 and 1975, "who" was used. In 1976, 1978, 1980, 1983, 1984 and 1986+, "whom" was used. In 2004, "neither" was not a response category.
RACOPEN,RACLIV RACCLOS, RACDIS, RACINTEG, RACFEW, RACHAF, RACMOST BUSING, RACPRES, RACCHURH	From 1983 to 1991 the choice of racial terms was listed "Black/Negro." In earlier years, it was "Negro/Black."
RACLIV, RACCLOS RACDIS, RACINTEG	In 1972, 1973, 1975, 1976, 1978, 1980, 1982+, the question read "Are there any (Negroes/blacks) living in this neighborhood now?" In the 1974 and 1977 surveys, the "now" was omitted. In the 1972-77 surveys, the question was asked of whites only. In the 1978, 1980, 1982+ surveys, this was asked of both races. In RACLIVE, RACCLOS, RACDIS and RACINTEG, whites were asked about "Negro[es]/black(s)." In RACLIVE, RACCLOS, and RACDIS, blacks were asked about "whites." In RACINTEG, blacks were asked about "Negro/black." In 1972-75, 1977, 1978, 1982+, 129B asked "blocks (or miles)." In 1976 and 1980, it read "(blocks/miles)." Since 1983, "Black" was used instead of "Negro/Black."
	In 1987, RACCLOS, RACDIS] were asked regardless of response to RACLIVE.
RACSCHOL	In the 1977 survey, "same school" (singular) was used. In 1972, "Negro" was used. Since then, "Negro/Black" was used.
RACFEW, RACHAF RACMOST,	In the 1972, 1974, 1975, and 1977 surveys, this was asked of whites only. Since the 1977 survey, this was asked of both races. Whites were asked about "Negroes/Blacks," and blacks were asked about "Whites."
RACPRES	In the 1972, 1975, and 1977 surveys, this was asked of whites only. Since the 1977 survey, this was asked of all respondents.
RACCHURH	Attending an integrated church (RACHURH) appears to be affected by changes in context due to the rotation design (See Appendix Q and GSS Methodological Report Nos. 55 and 56). Based on the 1988+ split-ballot comparisons, previous years can be adjusted for these effects.
HAPPY	Two separate context effects have distorted the time trend on personal happiness (HAPPY). First, personal happiness is higher for married persons when preceded by an item on marital happiness (HAPMAR). Marital happiness has preceded personal happiness on all surveys except 1972 and Form 3 in 1980 and Form 3 in 1987. To make a consistent series, we have a) used the experimental comparisons in 1980 and 1987 to adjust the 1972 personal happiness figures and have eliminated the variant experimental forms in 1980 and 1987 (GSS Social Change Report No. 6). Second, personal

happiness is lower when not preceded by the five-item, satisfaction scale (SATCITY, SATHOBBY, SATFAM, SATFRND, SATHEALT). This scale has routinely preceded personal happiness except in 1972, in 1985, on Form 2 in 1986, and on Forms 2 and 3 in 1987. The use of the experimental comparisons in 1986 and 1987 allows adjustments to be made (GSS Methodological Report No. 34).

HAPMAR

Marital happiness (HAPMAR) is lower when not preceded by the five-item, satisfaction scale (SATCITY, SATHOBBY, SATFAM, SATFRND, SATHEALT). This scale preceded marital happiness in all years except 1985 and on Form 2 in 1986 and Forms 2 and 3 in 1987. To create a consistent time series, use the experimental comparisons in 1986 and 1987 to adjust the 1985 figures (GSS Methodological Report No. 34).

HELPFUL

Belief in the helpfulness of people (HELPFUL) appears to be affected by ballot (GSS Methodological Report No. 55). Results from the 1988+ ballot comparisons can be used to adjust earlier years.

TRUST

Belief in the trustworthiness of people (TRUST) appears to be affected by ballot (GSS Methodological Report No. 55). Results from the 1988+ ballot comparisons can be used to adjust earlier years.

SATCITY

The item on community satisfaction (SATCITY) shows a significant ballot difference in 1988. While the other items on the satisfaction scale (SATFAM, SATHEALT, SATFRND, and SATHOBBY) do not show individually significant differences in 1988, the five items taken as a scale show significant, ballot-like differences prior to 1988 and borderline significance in 1988 (GSS Methodological Report No. 55).

SATFRND

Satisfaction with friends (SATFRND) appears to be affected by ballot (GSS Methodological Report No. 55). Results from the 1988+ ballot comparisons can be used to adjust earlier years.

In the 1973, 1976, 1978, 1980, 1983, 1984, 1986 surveys, it reads "Which three qualities listed on this card would you say are the most desirable for a child to have?"

In 1984 on Form 3, the gender-neutral Kohn child value items were asked in reverse order with "good student" first on the list and "good manners" last (GSS Methodological Report No. 30).

AGED

Support for having parents cared for in their children homes (AGED) is influenced by context resulting from the rotation scheme. The ballot experiments in 1988+ can be used to adjust for the rotation variation in prior years.

There have been variations in which words in the introduction were underlined. In 1977, 1978, 1980, 1983, and 1985, more or less/more or less was underlined. In 1976, agree/disagree was underlined. In 1974, more or less agree/more or less disagree was underlined. In 1973, both the 1977-78 and 1974 variations were used on parts of this question.

SATJOB

In the 1972 survey, those keeping house were not asked this question. In all later surveys, they were. In the 1972-74, and 1977+ surveys, those "unemployed, laid off, looking for work" were asked this question, but in the 1975-76 surveys, they were not.

RICHWORK

In the 1973-74, 1977, 1980, 1982, 1984, 1985, and 1987+ surveys, respondents "unemployed, laid off, looking for work" were asked this question. In the 1976 survey, they were not.

RANK, RANK10

In 1987, this was self-administered. Interviewer instructions, "Hand...below," were replaced with respondent instruction, "Please mark box below."

WKSUBS

In the 1976, 1982 and 1985 surveys, the question read "he or she."

WKSUB, WKSUBS
WKSUP, WKSUPS

No answers increased notably in 1988 due to an incorrect skip instruction on ballot A. In 1991, WKSUB was asked of respondents on all three ballots instead of on only two ballots as in previous years. This question was still asked of respondents' spouses, when applicable, on two ballots.

GETAHEAD

In the 1973-74 surveys, there was an unread response on "Other [Specify]" that was eliminated from the later surveys. The precoded unread response was "Luck most important or help from other people" in the 1976 survey.

CHLDMORE, CHLDNUM CHLDSOON	Code "4," "Not asked, inappropriate," was not precoded in surveys after 1977 as it had been in the 1972 and 1974-77 surveys. Because of this and changes in interviewer specifications (see Appendix B), marginals are not comparable across surveys.
CHLDNUM	One response of "12" in the 1972 survey and one response of "10" in the 1974 survey were recoded to "8 or more." Code "9" includes "don't know" and "no answer" responses.
TEENPILL	Approval of birth control information for teenagers (TEENPILL) used a Depends code in 1974. Since this code was selected by only three respondents, it has simply been recorded with Don't know and eliminated from the percentaged responses.
SEXEDUC	Approval of sex education (SEXEDUC) included a Depends category in 1974.
DIVLAW	When this item appeared on form 2 in 1978, the distribution varied from that of form 1 in 1978 and from the distributions of all forms in other years.
PREMARSEX, TEENSEX	This lead was used for PREMARSX, XMARSEX in 1974, 1975, 1977, 1978, 1980, and 1983+. In 1973 and 1976, the lead was "There has been a lot of discussion about the way morals and attitudes about sex are changing in this country."
HOMOSEX	In the 1973-74 surveys, there was an unread response of "Other [Specify]" which was dropped in later surveys.
PORNINF, PORNMORL PORNRAPE, PORNOUT	In the 1973 survey, the question used a card listing items A-D and used the following opening, "On this card are some opinions about the effects of looking at or reading such sexual materials." In the 1976 survey, no card was used, but the same opening sentence was used. In the 1975, 1978, 1983, 1984, and 1986-1994 surveys, "do" and "do not" were underlined.
PORNMORL	In the 1976 survey, the article "a" was inserted as follows: "Sexual materials lead to <u>a</u> breakdown of morals. Emphasis added.
PORNLAW	In the 1973 and 1975 surveys, no card was used.
HITOK, HITMARCH HITDRUNK, HITCHLD HITBEATR, HITROBBER POLHITOK, POLABUSE POLMURDR, POLESCAP POLATTAK	In the 1973 and 1975 surveys, those replying "no" to the introductory questions skipped on to the next question. Since 1975, the situational subparts were asked of all respondents regardless of their answer to the introductory question.
POLHITOK, POLABUSE POLMURDR, POLESCAP POLATTAK	In the 1975 survey, the list of situations was introduced with the lead, "Would you approve of a policeman striking a citizen who" In 1973, 1976, 1978, 1980, and 1983+, the lead was "Would you approve if the citizen" Also in the 1975 survey, part C was introduced "Would you approve of a policeman striking a citizen who"
FEAR	In the 1977 survey, the word "right" was omitted.

RADIOHRS

Hours listening to the radio (RADIOHRS) screens out people who report that they never listen to the radio and codes those who listen less than a half hour a day as zero. In 1982, zeroes were not coded. Recoding "Never" with those reporting zero hours per day results in a comparable time series.

PHONE

In the 1972-75, 1977, 1980, 1982, 1983 and 1984 surveys, the question asked "May I have your name and telephone number just in case my office wants to verify this interview? A. Is this phone located in your own home?" In 1978, "just" was omitted. In the 1976 survey, it was "Do you have a telephone? A. How many phone numbers altogether do you have? May I please have your name and (one of) your telephone number(s) just in case I have left something out in this interview? B. Is this phone located in your own home?" Since 1984, the question asked "to make sure I conducted" instead of "to verify." In 2004+, cell phone was added as a response category.
 In the 1973 and 1974 surveys, the information used came directly from PHONE. In the full probability halves of the 1975 and 1976 surveys and in the 1977, 1978, 1980, 1982+ full probability surveys, information from AGE, SPEDUC, and DEGREE on the screener was also used to obtain the maximum amount of usable information (see Below).

COOP2, COOP

Between the 1972 and 1973 surveys, the response categories for respondent cooperation were altered. The original usage appears as COOP2 and the revised usage as COOP.

RACAVOID, RACCHNG
RACQUIT, RACDIF1,
RACDIF2, RACDIF3
RACDIF4

Questions prior to 1993 used the phrase "Negroes/Blacks," while those asked in or since 1993 used "African-Americans/Blacks."

RACDIF1, RACDIF2
RACDIF3, RACDIF4

In 1977, this was asked of non-blacks only. Since 1985, it has been asked of everyone.

MESERV

In 1982 on Form 2, the question on national service for men (MESERVE) was asked immediately after a similar question on national service for women (FESERVE). This variant ordering produced a

norm of even handedness context effect (GSS Methodological Report No. 55).

HELPBLK

Questions prior to 1993 used the phrase "Negroes/Blacks," while those asked in or since 1993 used "African-Americans/Blacks."

NUMGIVEN

In 1987, the modified question read "From time to time, most people discuss important matters with other people. Who are the people with whom you discuss such matters? Just tell me their first names or initials. IF LESS THAN 3 NAMES MENTIONED, PROBE, ANYONE ELSE? ONLY RECORD FIRST THREE NAMES, BELOW AND ON NEXT PAGE." Since probes stopped after 3 mentions, the distribution is sharply truncated at 3 in 1987.

EQCLOSE, RCLOSE1
RCLOSE2, RCLOSE3
RCLOSE4, RCLOSE5

In 1987, more people reported they were equally close to all mentioned people, since this referred to a maximum of 3 instead of a maximum of 5 as in 1985. This lowered the percent "especially close" for RCLOSE1-RCLOSE3. Also, the number of missing values (Punch 9) are much higher in 1987.

In 1987, the categories on the card were Spouse/Parent/Sibling/Child/Other family/Co-worker/Member of group/Neighbor/Friend/Advisor/Other. This clearly inflated the mentions on ADVISOR1-ADVISOR3.

MEMFRAT, MEMSERV
MEMVET, MEMPOLIT
MEMUNION, MEMSPORT
MEMYOUTH, MEMSCHL
MEMHOBBY, MEMGREEK

Originally in the 1974 data, this was precoded as a dichotomy (belongs to no organizations/belongs to one or more). The 1974 data were revised to conform to the latter practice of coding the total number of organizations that respondent belonged to.

Part P, "Any other groups," was not listed on the show card on Ballot C in 1990 and 1991 and on Ballot B in 1991. In 1990 Part P, "Any other groups," was not asked on Ballot C. Part P, "Any other groups" was listed on the show card for all ballots in 1993.

MEMNAT, MEMFARM
MEMILT, MEMPROF
MEMCHURH, MEMOTHER

FRNDREL1, FRNDREL2
FRNDREL3, FRNDREL4
FRNDREL5

The 1988 variables FRNDREL1 to FRNDOTH3 were subsequently recoded to include the religions of the friends who were in the same congregation as the respondent (previously considered missing). In 1989, codes of 4 and 5 on FRNDREL1 to FRNDREL3 were reversed to correct a coding error.

SATHOME

In 1996, Ballot B omitted the instruction "READ CATEGORIES BELOW."

LAWYERA

In 1996, Ballot B used the phrase "of the place" instead of "of the firm or attorney."

LAWYERG

In 1996, this appeared only on Ballot B.

DRCTLINK, TYPEURL
SRCHENG, BOOKMARK
CATDRCTY, HYPERLNK

In 2000, the question text was "Uses a bookmark".

HLTHINFO, 793A-G

In 2000, response option 3, "6 or more times," was not offered. Response option 2 read simply "3 or more times".

BUYINFGN, INVESTGN
TRAVELGN, PEOPLEGN
GAMEGN, NEWJOBGN
POLDISGN, POLINFGN
PERFRMGN, ARTGN,
POLCANGN,

In 2000, response option 3, "6 or more times," was not offered. Response option 2 read simply "3 or more times".

WWWLINE2

In 2000 "Wireless connection (e.g. from a satellite)" was not an option offered on the Hand Card, and "Other, not mentioned above" was a precoded option, whereas in 2002 it was volunteered only.

OPRICH, OPPROF
OPFAMILY,

The response categories and the wording of the question itself have not varied. In 1985, 1990, and 1996, it was a stand-alone item with the introduction, "What is your opinion of the following statement?" In 1987 and 2000, it was part of a battery with the introduction, "Do you agree or disagree..." In 1993 and 1994, it was part of a battery with the introduction, "How much do you agree or disagree with each of these statements?"

INCGAP
GOVEDOP, GOVJOBS
GOVLESS, GOVUNEMP
GOVMINC

In 1996, items were not asked as part of ISSP. "Somewhat" appeared with "agree" and "disagree," and "can't choose" was not an explicit option.

GOVEQINC

From 1987 through 2000, the category "Can't choose" appeared on the questionnaire; in 2008 and 2010, "Don't know" appeared instead on the questionnaire. In 1996 and 2010, responses used on the questionnaire were "Agree strongly" and "Disagree strongly" instead of "Strongly agree" and "Strongly disagree". In 2010, due to a programming error, DKs and NAs were not separately coded; they were later separated based on the pattern of responses to adjoining questions.

FAMBUDGT	In 1994 the first option listed was punch one "I manage all the money and give my partner his/her share." Punch two also used "partner" instead of "spouse/partner. Punch six read "Not married or living as married," respondents answering this way are recorded under punch zero "I am not currently living with a spouse or partner."
TWOINCS	In 1994, a fifth response option, "strongly disagree," was included.
LOCALNUM	In 1991, this question was asked of all employed people as part of the Work Organization Module. The screener for this question was used in 1989.
SEXSEX	In 1991, some respondents who should have been asked this question (SEXSEX) were unintentionally skipped out. Based on analysis of the 1988-1990 pattern and manual inspection of the questionnaires we were able to largely correct this problem. However, 1991 may still be different somewhat from other years.
GENEGOOD	In 1996, this question did not use the precoded response category "IT DEPENDS," Punch 3.
ETH1, ETH2, ETH3	<p>In the 1972-73 surveys, American Indians were coded as "Other," punch "29." In the 1974-78, 1980, 1982+ surveys, American Indians were a precoded ethnicity, punch "30." American Indians have been recoded to "30" for all surveys. After the 1977 survey, a general review of the ethnicity coding was made and all "Other" lists for 1972-77 were examined. Based on this review, the pre-listed "National Codes" were revised. Nations that were not on the list but accounted for 0.1 percent of the cases from 1972 to 1977 (an arbitrary minimum percentage) were prelisted in the "National Codes" in 1978, 1980, 1982+. This added Belgium, India, Lithuania, Portugal, Rumania, and Yugoslavia. One code, "West Indies," was deleted from the "National Codes," since it referred neither to a country nor a distinct ethnic group.</p> <p>At the same time, several changes were made in the general coding of the ethnicity question. First, the review revealed that a few cases coded "Other" actually represented countries already precoded (e.g., Bohemia to Czechoslovakia, Togo to Africa, and Dutch to The Netherlands). These were recoded to their proper nationality. Second, the cases in 1972-1977 matching the six new nationalities added in 1978 were recoded into their proper nationality. Third, codes of "West Indies" were examined and recoded into Non-Spanish West Indies (e.g., Jamaica), not specified West Indies, or into a new grouped category, Other Spanish. Fourth, two new grouped categories, Other Spanish (Spanish West Indies, Central America, and South America) and Arabic (Arabic countries of the Middle East and North Africa) were added. Finally, a large group of "Other" cases giving their origin as "United States," or "American," some particular region or state of the United States, or the like were recoded as "America." (While these responses were frequent enough to justify the creation of a precoded "America" category, this was not done in order not to encourage this response.) This minimized the number of cases remaining in the "Other" category to about eight cases per survey.</p> <p>Since 1984, the ethnicity question was adapted to record up to three ethnicities mentioned. In 1994, the following new response codes were introduced: 40) Other Asian, 41) Other European.</p>
WWWHR, WWWMIN	<p>Before 2004 and on versions 5-6 in 2004 WWWHR and WWWMIN were screened on USEWWW and COMPUSE. On versions 1-4 in 2004 and in 2006 there were no screening questions. To make WWWHR and WWWMIN more similar across years, those indicating no use were coded as "Not Applicable" on version 1-4 in 2004 and in 2006 (i.e. in effect as "screened-out"). There are some cases in 2000 and 2002 which have zero use indicated on WWWHR and WWWMIN. Users might consider also recoding these as "Not Applicable" for comparisons across years.</p>
EQUALIZE	<p>From 1985 through 1998, this question was self-administered, and it had "Can't choose" among options. In 2006, it was administered with interviewer assistance, and it had "Don't know" instead.</p>

SEXFREQ	This question appeared on only form 1 in 1990. Variants of this question, SEXFREQ1 and SEXFREQ2, were asked on form 2 in 1990. In 2012 only, SEXFREQ was skipped if the respondent answered “No partner” on the PARTNERS question.
JEW AJ, SPJEW AJ, JEW16AJ, SPOTHJEW SPREL16, SPDEN16, SPOTH16	In 2012: OTHJEW screened respondents for JEW AJ; before 2012, OTHJEW screened respondents for JEW. OTHJEW16 screened respondents for JEW16AJ; before 2012, OTHJEW16 screened respondents for JEW16AJ. SPOTHJEW screened respondents for SPJEW AJ; before 2012, SPOTHJEW screened respondents for SPJEW. SPOTHJEW was asked if RELIG=3, or OTHJEW=1 or 2, or RELIG16=3, or OTHJEW16=1 or 2, or JEW16=2 and SPREL=4 or DK, and MARITAL=1. SPREL16 was asked if MARITAL=1 and OTHJEW=1 or 2, or RELIG=3, or OTHJEW16=1 or 2, or RELIG16=3.
MARELIG, PARELIG	In 2008, MARELIG and PARELIG were only asked to respondents who selected "Jewish" as their own religion. In 2012, they were asked if RELIG=3, or OTHJEW=1 or 2, or RELIG16=3, or OTHJEW16=1 or 2.
KIDNUM, KD1RELIG - KD8RELIG	In 2012, KIDNUM was asked if RELIG=1, or OTHJEW=1 or 2, or SPOTHJEW=1 or 2. In 2012, KD1RELIG-KD8RELIG were asked if RELIG=3, or OTHJEW=1 or 2, or SPREL=3, or SPOTHJEW=1 or 2, and if the respondent said he/she was currently living in the household under the age of 18.
AIDCOL	This question is part of the ISSP Role of Government module. In 1990 and 1996, the standard ISSP question was changed to better reflect the terms that Americans used to discuss this issue, using “college students” and “financial assistance” instead of “university students” and “financial help”. In 2006, this change was not made.
HRSMONEY	In 1989, the word ‘any’ was omitted from the first sentence, only asking about regular overtime.
WRKENJOY	In 1989, the question specified “paying job” and “that money” instead of the current wording. I would enjoy having a paying job even if I did not need that money
VIGVERSN	In 1996, the schizophrenia vignette was asked “[Name] is [a/an Race/Ethnicity] [man/woman] who has completed [education].”, and omitted the following sentences: [Name] became so preoccupied with what s/he was thinking that [he/she] skipped meals and stopped bathing regularly. At night, when everyone else was sleeping, [he/she] was walking back and forth in [his/her] room. In 2006 and 2018, it was asked “[Name] is [a/an Race/Ethnicity] [man/woman] with an [8 th grade/HS/college] education.” In 1996, the drug vignette referred to cocaine use. In 2018, it referred to opioid use.

PREVIOUS USAGE

Many of the questions in this study are replications of items previously occurring in national studies; many of these have also occurred in variant wordings in past studies. The majority of the previous studies were conducted by the American Institute of Public Opinion—The Gallup Poll (AIPO); the Survey Research Center, University of Michigan (SRC); and by NORC. Information on earlier usages are available from the GSS.

APPENDIX P:

EXPERIMENTAL FORMS

The GSS has used split samples in 1973, 1974, 1985, 1986, and 1988+ and three forms were used in 1980, 1984, and 1987. The different experimental forms are designated on FORM as Form 1 (the standard wordings), Form 2 (the "y" variant wordings), and Form 3 (the "z" variant wordings).

In 1994+ there were also two samples (A and B) employed. As a result there are Forms 1 and 2 on samples A and B, or four versions (A1, A2, B1, B2). In 2008 there was only one sample. See also discussion on BALLOT in Appendix Q.

Split samples on the GSS have been used for three broad purposes. First, to test differences in the structure and/or wording of questions or scales. Second, to test the impact of context on questions including both the order that different questions appear in and the order of sub-parts of a single question. Third, in order to accommodate additional questions, some questions have been asked of respondents on only one form.

All of the questions that have either appeared in different versions or orders on the experimental forms or which appeared as a supplement on one form only are listed in Table P.1. The table lists the form on which the items appear and the table notes indicate the form differences on the context variations.

In addition to the experiments using FORM, the GSS has employed factorial vignettes in several years. The first on welfare was done in 1986 and is not part of the cumulative file (see Appendix S). The second on mental health was in 1996 and had 90 versions (see VIGVERSN and following variables). The third on terminal illness was in 1998 and there were six versions (see TERMVIO and following variables). The fourth on doctors and patients was in 2002 and there were six versions (see DOCVIG and following variables). The fifth on the mental health of children was in 2002 and had 32 versions (see CHLDVIG and following variables). The sixth on genes and environment was in 2004 and had 24 versions (see GENEVIG1 and following variables). The seventh on mental health and stigma was in 2006 and had 24 versions (see M1VIG1 and following variables).

Because of problems with the form randomization procedure used on the 1978, 1980, 1982-1985 surveys, users should weight by FORMWT to adjust for incomplete randomization. In general, one should use FORMWT whenever analyzing form-related variables. This includes 1) when comparisons are being made between experimental variables (e.g. COURTS and COURTSY in 1982), 2) when variables are being compared across years involving an experiment (e.g. EQWLTH which appears only on form 1 in 1978 with EQWLTH that appears on both forms in 1980, 1983, 1984, etc.), and 3) when a variable appears on one form only (e.g. the ISSP variables in 1985).

For full details on the problem with form randomization and FORMWT see GSS Methodological Report No. 36.¹

- a Early in the questionnaire DIVLAW, GRASS, and POLVIEWS were asked on form 1 while DIVLAWY, GRASSY, and POLVIEWY were asked on form 2. DIVLAW, GRASS, and POLVIEWS were also asked at a later point in the survey on form 2. See Appendix B.
- b The experiments were only on versions 4-6.
- C1 - On form 1 ABANY, ABDEFECT, ABHLTH, ABRAPE, ABNOMORE and ABSINGLE appeared immediately before the c qualities question (AMICABLE...SUCCESS) and CHLDIDEL. On form 2 the abortion question immediately followed chil qualities and CHLDIDEL.
- C2 - On form 1 CONBUS...CONTV appeared immediately before ALIENAT1-6. On form 2 the order was reversed.
- C3 - On forms 1 and 2 the child qualities (AMICABLY...SUCCESSY) were asked in their regular order, items A-M. On form 3 they were in reversed order, items M-A.
- C4 - On form 1 ANOMIA5-7 were grouped together. On form 2 they were scattered throughout the questionnaire. See Appendix B.
- C5 - Form 1 included RACDIN, RACPUSH, and RACSCHOL. These questions did not appear on form 2. BUSING, RACHOME, and RACSEG appeared on both forms. On form 1 they were preceded by RACSCHOL, RACDIN, and RACPUSH.
- C6 - BRAZIL and ENGLAND appeared on only form 1. CANADA, CHINA, EGYPT, ISRAEL, JAPAN, and RUSSIA appeared on both forms.
- C7 - MESERVE immediately preceded FESERVE on form 1. On form 2 the order was reversed.
- C8 - On forms 1 and 2 HAPMAR immediately preceded HAPPY. On form 3 the order was reversed.
- C9 - On form 1 SATCITY, SATFAM, SATFRND, SATHEALT, and SATHOBBY immediately preceded HAPPY

and HAPMAR. On form 2 the order was reversed.

- C10- On form 1 TAX was asked immediately before the spending scale (NATARMS...NATSPAC).
On form 2 the order was reversed.
- C11- On form 1 SATCITY, SATFAM, SATFRND, SATHEALT, AND SATHOBBY came first followed by HAPMAR and then HAPPY. On form 2 HAPMAR came first followed by HAPPY and then SATCITY... SATHOBBY. On form 3 HAPPY came first followed by HAPMAR, and then SATCITY...SATHOBBY.
- C12- On form 1 the following introduction preceded PARTNERS, "Now we would like you to answer some additional questions. Your answers are confidential and will be used only for statistical reports."
On form 2 PARTNERS was preceded by "There is a great deal of concern today about the AIDS epidemic and how to deal with it. Because of the grave nature of this problem, we are going to ask you some personal questions and we need your frank and honest responses. Your answers are confidential and will be used only for statistical reports."
- C13- On form 1 SEXFREQ followed SEXSEX. On form 2 SEXFREQ preceded PARTNERS.
- C14- These were asked on form 1 on versions 1-3 and forms 1 and 2 on versions 4-6.
- C15- Two different way of programming these questions were used. On form 2 the program used in 2002 was used.
On form 1 an alternative program more similar to that used in pre-CAPI was employed.
- C16- BIGBANG and BIGBANG1 were asked on different random halves within BALLOT=2 or 3.
- C17- EVOLVED and EVOLVED1 were asked on different random halves within BALLOT=2 or 3.
- d Experiments were only on the C sample, version 7
- E1- LETDIE1 (Form X), LETDIE1Y (Form Y) "...doctors should OR SHOULD NOT be allowed..." Added text in CAPITALS
LETDIE1Y appears in 2008 cross-section only
- E2- PILLOK (Form X), PILLOKY (Form Y) Do strongly disagree, disagree, agree, or strongly agree that methods of birth control should be available to teenagers between the ages of 14 and 16 if their parents do not approve?
PILLOKY appears in 2008 cross-section only
- E3- POLHITOK (Form X), POLHITOKY (Form Y) added at end "or are there no situations you can image in which you would approve of this?
POLHITOKY appears in 2008 cross-section only
- E4- POPESPKS (Form X), POPESPKY (Form Y) Certainly false, Probably false, I am uncertain whether this is false or true, Probably true Note: This uses a card and there will be TWO versions of the card.
POPESPKY appears in 2008 cross-section only

Science Module Randomization (2008 data)

The Science Module was included in Ballot 1 and Ballot 2 of the questionnaire.

Among those who were assigned to Ballot 3, only 25% received the Science questions.

Within the Science module, some questions were randomly assigned according to the following three conditions:

- 1 SCIINTRO: long or short introduction
Long introduction: Now, let me ask you about your use of museums, zoos, and similar institutions. I am going to read you a short list of places and ask you to tell me how many times you visited each type of place during the last year, that is, the last 12 months. If you did not visit any given place, just say none.
Short introduction: Now, I am going to read you a short list of places and ask you to tell me how many times you visited each type of place during the last year, that is, the last 12 months. If you did not visit any given place, just say none.
- 2 SCIMODE: assigned to self-administered questionnaire or face-to-face interview mode
- 3 MABOYGRL or BOYORGRL were randomly assigned.
MABOYGRL: It is the mother's gene that decides whether the baby is a boy or a girl.
BOYORGRL: It is the father's gene that decides whether the baby is a boy or a girl.

APPENDIX Q:
STUDY DESIGNS

Since its inception, the GSS employed a rotation design under which most of its items appeared on two out of every three surveys. There are three rotation patterns, so overall the data appeared as in Table Q.1.

Table Q.1
Item Appearances on the GSS, 1972-1987

	Surveys					
	1	2	3	4	5	6
Permanent items	X	X	X	X	X	X
Rotation 1	X	X		X	X	
Rotation 2		X	X		X	X
Rotation 3	X		X	X		X

This rotation scheme (designed by Otis Dudley Duncan) allowed the GSS to include more regular items (since each rotating item appeared only 2/3 of the time), but still provided for the regular and reasonably dense repetition of questions. The importance of the rotation scheme has increased in recent years, since more items have been shifted from permanent to rotating status in order to open up sufficient room for the topical modules.

While this design proved to be a very useful device for both monitoring change and augmenting the content of the GSS, it had the disadvantage of irregularly spacing the data and allowing gaps in the time series. This situation was particularly acute during the 1978-1982 period when NSF did not fund surveys in 1979 and 1981. At that juncture, four-year gaps regularly appeared in the data and six-year lapses existed for bivariate correlations between items from different rotations. Even with annual surveys, two-year gaps and three-year intervals for bivariate correlations occur.

To reduce this imbalance in the time series and reduce the length of intervals, we switched in 1988 from the rotation, across-time design previously used to a split-ballot design. Under this design rotations 1, 2, and 3 occur across random sub-samples within each survey rather than across surveys (and years). Each sub-sample (known as "ballots") consists of 1/3 of the sample. Note that the variable `BALLOT` denotes which of these rotational sub-samples a person received, and the variable `form` (see Appendix P) tells which experimental form a person received.

Table Q.2
Item Appearance on the GSS, 1988+

	Surveys YEARS								
	1			2			3		
	Ballots			Ballots			Ballots		
	A	B	C	A	B	C	A	B	C
Permanent items	X	X	X	X	X	X	X	X	X
Rotation 1	X	X		X	X		X	X	
Rotation 2		X	X		X	X		X	X
Rotation 3	X		X	X		X	X		X

Table Q.2 shows how ballots now take the place of surveys (years).

Permanent items appear on all ballots of all surveys. Items in rotation 1 appear on ballots A and B on each survey; items on rotation 2 appear on ballots B and C; and items on rotation 3 on ballots A and C. In effect, ballot A contains those items that appeared under year 1 of the old rotation across survey scheme (Table Q.1), ballot B represents year 2, and ballot C year 3. As one can see by comparing years 1-3 in Table Q.2, the content of the core GSS no longer varies across surveys (years) but remains fixed.

In terms of appearances, permanent items are not affected by this switch. They continue to appear on all cases for all surveys. Rotating items will now appear on all surveys and be asked on each survey of two-thirds of respondents. Over a three-year cycle, the same number of respondents are asked the "rotating" items as before (3,000), but instead of coming in two segments of 1,500 each from two surveys, they appear in three segments of 1,000 each from three surveys. More details on the rationale and implications of this switch are covered in Tom W. Smith, "Rotation Design of the GSS," GSS Methodological Report No. 52. Chicago: NORC, February, 1988.

Table Q.3 shows how the items in 1988 fit into the rotation design. There are 169 permanent items that appear on all forms; 92 rotating items that appear on ballots A and B, 94 rotating items that appear on ballots B and C, and 55 rotating items that appear on ballots A and C. Together these make up the replicating core of the GSS, and they will appear in the same fashion over the next

four surveys. Altogether there are 316 core items on ballot A, 355 on ballot B, and 318 on ballot C. The bottom half of Table Q.3 shows the appearance of supplemental items. These items are not part of the replicating core and are not governed by the rotation design or ballots. Normally these items appear in a single year only, although supplemental items may repeat in different surveys.¹ One special feature of the 1988 design is that the topical module on religion not only added 70 new items, but also upgraded 27 religious items that are part of the replicating core. These items are part of rotation 1, regularly appearing on ballots A and B. In 1988, these religion items were added on ballot C so that they would be asked of all respondents just as were the new religion items in the topical module.

¹For example, a substantial part of the 1985 network module was repeated as part of the socio-political participation module in 1987 and part of the 1985 ISSP role of government module was repeated in 1990

Appendix U indicates on which ballots a variable appears.

Since 1994, the GSS has employed a biennial, dual sample design. That means that the GSSs appear in even years and consist of two, traditional samples. In effect, each dual sample GSS is two regular, annual GSSs administered simultaneously. These two surveys appear on the A and B samples and are listed as 94A, 94B, etc. in Appendix U. Each sample is subdivided into the three ballots as described above. To distinguish between the ballots that appear on samples A and B, the variable VERSION is used. The following table shows how sample, ballot, version, and year are related:

How VERSION Matches Sample and BALLOT by YEAR

	YEAR		
	1994	1996-2000	2002
Sample=A			
BALLOT A	1,4	1	1
BALLOT B	2,5	2	2
BALLOT C	3,6	3	3
Sample=B			(Reduced core)
BALLOT A	7	4	4
BALLOT B	8	5	5
BALLOT C	9	6	6

For example, in 1996 VERSION 2 is BALLOT B on sample A and VERSION 5 is BALLOT B on sample B.

There are three extra versions in sample A in 1994 because there was a special experimental design. VERSIONS 1-3 included the longer, old core and VERSIONS 4-6 included the shorter, new core. The new core is used in sample B and subsequent years. For more details on this experiment see Tom W. Smith, "Context Effects Resulting from the Revision of the GSS Core in 1994," GSS Methodological Report No. 84. Chicago: NORC, 1995. In 2002 the same six versions as used in 1996-2000 were employed, but the core items were greatly reduced in sample B (versions 4-6). In 2006 there was a 7th version, which was a ballot D. Some items appearing in version 1-6 also appeared in Version 7, but the rotation of items occurred on VERSIONS 1-6 only as described above.

Panel Component

The GSS is switching from a repeating, cross-section design to a combined repeating cross-section and panel-component design. The 2006 GSS is the base year for the first panel. A sub-sample of 2000 GSS cases from 2006 was selected for reinterview in 2008 and again in 2010 as part of the GSSs in those years. The 2008 GSS consists of a new cross-section of 2023 plus the 2006 reinterviews. The 2010 GSS consists of another new cross-section of 2044, the second reinterview wave of the 2006 panel cases and the first reinterview wave of the 2008 panel cases. The 2010 GSS is the first one to fully implement the new, combined design. In 2012 there likewise was a fresh cross-section, wave two panel cases from the immediately preceding GSS, and wave three panel cases from the next earlier GSS. In 2014, the last of the panels completed wave three, along with a new cross-section.

APPENDIX R:
CROSSNATIONAL AND TOPICAL MODULES

Since 1980, the GSS has been collaborating with counterparts in other countries. Initial bilateral contact between GSS Allgemeine Bevölkerungsumfrage der Sozialwissenschaften (ALLBUS) at the Zentrum fuer Umfragen, Methoden, und Analysen (ZUMA) of the Federal Republic of Germany grew into a multinational collaboration between GSS/NORC, ALLBUS/ZUMA, the British Social Attitudes Survey (BSA) at Social and Community Planning Research (SCPR) of England, and the National Social Science Survey (NSSS) at Australian National University (ANU). SCPR has been renamed the National Centre for Social Research, ZUMA has become a part of Gesellschaft Sozialwissenschaftlicher Infrastruktureinrichtungen (GESIS), and the NSSS is now the Australian Survey of Social Attitudes (AUSSA). This cross national collaboration is formally referred to as the International Social Survey Program (ISSP). Other nations that have since joined include Ireland, Austria, the Netherlands, Hungary, Israel, Norway, Italy, Russia, New Zealand, Canada, the Philippines, the Czech Republic, Slovakia, Bulgaria, Japan, Slovenia, Cyprus, Sweden, France, Poland, Spain, Portugal, Bangladesh, Chile, Latvia, Switzerland, Denmark, Brazil, Venezuela, Finland, Mexico, South Africa, Belgium, Taiwan, Korea, Croatia, Estonia, the Dominican Republic, Turkey, China, Ukraine, Argentina, Uruguay, Palestine, Iceland, India, Lithuania, Bolivia, Georgia and Suriname.

Under the ISSP, a supplement is designed jointly by the group each year and administered by each participant. The first data collection for ISSP was carried out in 1985. These supplements are collected either as a self-administered supplement to the regular annual surveys conducted by the participants as part of stand-alone mail surveys, or a stand-alone in-person surveys. Because of the long length of the 1985 supplement, the GSS administered it only to respondents who had received form 1 of the main questionnaire. Three form 2 cases did inadvertently complete the ISSP supplement, however, and they are included in the data. Since the ISSP was a supplement and respondents had the option of completing it immediately after the main questionnaire, completing it later, or not doing the supplement, there is some attrition in the level of response. Respondents designated to receive the ISSP supplement who did not complete it are coded 2 on the variable "ISSP." In 1985 and 1987-2000 the ISSP was collected on a self-completed questionnaire (SAQ). In 1986 the questions on turning to people for help and advice were on a SAQ and the rest of the ISSP questions were administered by interviewers. Since 2002 the ISSP questions have been administered by interviewers. Besides the ISSP module that is part of each new cross-section and appear in the cumulative GSS file, since 2008 a second ISSP module has appeared in the reinterview panels. Those data are released as part of the panel files.

Data from the other countries participating in ISSP can be obtained either by contacting the individual data collectors or ICPSR at the University of Michigan. A merged file has been constructed for the 1982 GSS/ALLBUS collaboration and is available from ICPSR.¹ For the 1985 Role of Government, 1986 Social Networks, 1987 Social Inequality; 1988 Family and Changing Gender Roles; 1989 Work Orientations; 1990 Role of Government II; 1991 Religion; 1992 Social Inequality II; 1993 Environment; 1994 Family and Changing Gender Roles II; 1995 National Identity; 1996 Role of Government III; 1997 Work Orientation II; 1998 Religion II; 1999 Social Inequality III; 2000 Environment; 2001 Social Relations; 2002 Family and Changing Gender Roles III; 2003 National Identity II; 2004 Citizenship; 2005 Work Orientations III; 2006 Role of Government IV; 2007 Sports & Leisure; 2008 Religion III; 2009 Social Inequality IV; and 2010 Environment III; 2011 Health Policy; 2012 Family and Changing Gender Roles IV; 2013 National Identity III; 2014 Citizenship II; 2015 Work Orientations IV; 2017 Social Relations; and 2018 Religion IV a merged file has been created by the ZentralArchiv fuer Empirische Sozialforschung, University of Cologne, Germany, which is now part of the GESIS. They may be ordered from ICPSR.

In Table R.1, all of the GSS variables that have appeared on surveys in other countries are indicated. The table indicates in what year and by what group the comparative data was collected. Standard demographics (e.g. age, sex, party identification) that are asked by each country are not listed in this table.

Table R.2 lists the participating countries and organizations and show what modules they have done or plan to do.

^aThe 1992 data are not part of the 1973-2008 cumulative data set. The 1991 GSS respondents were reinterviewed in 1992. In all, 1,273 reinterviews were obtained. The 1992 reinterview consisted of the I module on social inequality, other questions on inequality and stratification from the 1991 GSS, and key demographics likely to have changed over the last year. The 1992 reinterview data are available in two forms. First, the 1992 I items on inequality are part of the I cross-national file prepared by the Central Archive, University of Cologne and is available from the Interuniversity Consortium from Political and Social Research (ICPSR). Second, all 1992 variables are part of a reinterview file that is linked to the 1991 GSS data. This reinterview file is available from the Roper Center, or from ICPSR (See Appendix S).

We included health, leisure, and sports ISSP modules asked in panel data.

APPENDIX S:
SUPPLEMENTAL AND RELATED DATA

Almost all of the information that the GSS has collected appears in the main, cumulative file that is documented by this codebook. However, information from related and follow-up studies as well as some supplemental data from the GSS proper are not included in the cumulative file, but are available in special supplements and related data files. These data come in four forms: 1) reinterviews, 2) linked studies, 3) supplements, and 4) cross-national studies.

Reinterviews

GSS respondents have been reinterviewed both as part of methodological studies and as part of follow-up, substantive studies. The methodological uses have included studies of reliability and cognition:

1. In 1972, 1973, 1974, and 1978, test/retest studies of item stability and reliability were conducted. In each year a subsample of respondents (1972=380, 1973=227, 1974=210, 1978=265) were recontacted by phone one to two months after the initial GSS interview and reasked a subset of questions (1972=92, 1973=55, 1974=19, 1978=23). In 1972 and 1978 there was one reinterview (two waves in all) and in 1973 and 1974 there were two reinterviews (three waves altogether). These reinterviews are discussed in GSS Methodological Report No. 8.

2. In 1988, a group of cognitive scientists at the University of Chicago (Norman Bradburn, Janellen Huttenlocher, and Steven Shevell) expanded the normal GSS validation effort by increasing the sample size to almost half (n=629) and adding recall questions about the timing and content of the initial interview. Respondents were recontacted by phone about two months after their initial interview. The reinterview reports were then validated against the known information on date and content, and models of memory were developed to explain the discrepancies. Data are available from Janellen Huttenlocher, Dept. of Psychology, University of Chicago, Chicago, IL 60637.

The GSS has also served as a list sample for four substantive, follow-up studies:

1. The first follow-up study in 1987 contained questions on political tolerance designed by James Gibson (with support from NSF), and C. William Cloninger's Tridimensional Personality Scale. For this survey, 1,267 respondents were reinterviewed in person about three to four months after the 1987 GSS. The Freedom and Tolerance in the United States study is available from ICPSR (No. 9454).

2. The 1990 National Survey of Functional Health Status, conducted for John Ware at the New England Medical Center Hospitals with support from the Kaiser Family Foundation reinterviewed GSS respondents from the 1989 and 1990 surveys, plus an additional sample of people sixty-five and older from these people's households for a total sample size of 3,251. An experimental comparison of mail and telephone reinterviewing was carried out. Data are available from ICPSR.

3. The 1992 GSS Reinterview recontacted 1991 GSS respondents via a combination of mail and telephone. In all, 1,273 reinterviews were obtained for a response rate of 84.5%. The 1992 reinterview consisted of the ISSP module on social inequality, other questions on inequality and stratification from the 1991 GSS, and key demographics likely to have changed over the last year. This file is available from the Roper Center.

4. The 1996 GSS Reinterview recontacted 376 parents of children enrolled in grades 1-8 in 1996-97. The surveys dealt with educational issues in general and parental involvement in school programs in particular. The data are available from NORC.

5. From 2006 to 2012 the GSS replaced its replicating cross-sectional design to a design that uses rotating panels: As Table 1 shows below, in 2008 there were two components: a new 2008 cross-section with 2,023 cases and the first reinterviews with 1,536 respondents from the 2006 GSS. In 2010 GSS had the 3rd wave of 2006 respondents (N=1,276), 2nd wave of 2008 respondents (N=1,581), and 1st wave (cross-section) of 2010 respondents (N=2,044). In 2012 GSS had the 3rd wave of 2008 respondents (N=1,295), 2nd wave of 2010 respondents (N=1,551), and the 1st wave (cross-section) of 2012 respondents (N=1,974). In 2014 the GSS had the third and final wave of the 2010 respondents (N=1,304)

	2006	2008	2010	2012	2014
1 st wave	4510 ^a	2023	2044		
2 nd wave		1536	1581	1551	
3 rd wave			1276	1295	1304
Combined N	4510	3559	4901	4820	3847

Note:^a Of the 4,510 respondents, 2,000 respondents were selected for the 2008 panel (2nd wave).

Linked Studies

The GSS has twice been used to identify organizations or individuals connected to the GSS respondent and they have then been the object of follow-up studies:

1. National Organizations Survey (NOS): In the 1991 GSS, the name and contact information of the employer of respondent and his/her spouse was collected. A follow-up study of these employers was carried out by Arne L. Kalleberg, David Knoke, Peter V. Marsden, and Joe L. Spaeth. The National Organization Survey has 727 cases which consist of a) information on the employer, b) information about the GSS respondent and/or spouse employed by the employer, and c) aggregate industry-level information. The second wave of NOS (n=516) was collected in 2002 based on the 2002 GSS respondents. Both files are available from ICPSR.

2. On the 1994 GSS contact information was sought for a randomly chosen sibling of the respondent. Robert Hauser and Robert Mare, University of Wisconsin, are conducting a follow-up interview with that sibling. The information from the 1994 GSS and the Sibling study will be merged. The data are available from the University of Wisconsin.

3. National Congregations Study (NCS): In the 1998, 2006, 2012, and 2018 GSS, respondents who attend religious services were asked to name their religious congregation. A variety of information about each congregation was gathered from the interview with key informant at each congregation in 1998 and 2006-2007. A third round based on the 2012 GSS was conducted in 2012. A fourth round based on the 2018 GSS will be conducted in 2018. These studies were carried out by Mark Chaves. More information is available from <http://www.soc.duke.edu/natcong/>.

5. National Voluntary Association Survey (NVAS): In the 2004 GSS, a sample of 1,437 respondents were asked about their group affiliations and asked to name of a key informant/group leader. These respondents were reinterviewed in 2006. This study is carried out by Lynn Smith-Lovin, Duke University.

6. GSS-National Death Index (NDI) study: In the 2009-2010, 1978-2002 GSS respondents were linked to the National Death Index. This study is carried out by Peter Muennig, Columbia University.

7. National Occupation Study

Supplements

Because of their special characteristics, two sets of information collected as part of the GSS proper are distributed as supplemental files that can be matched to the GSS cumulative file using case identification numbers.

1. In 1986, 10 factorial vignettes about welfare benefits were administered to GSS respondents (GSS Methodological Reports Nos 44 and 47). In this file, the unit of analysis is the vignette rather than the respondent. There are 14,700 cases and 19 variables per case. The data (NORC/GSS72-86 - Vignettes) are available from the Roper Center.

2. In 1989, occupational prestige rankings were collected from sub-samples of respondents for a total 730 occupations. From these ratings, NORC-GSS Occupational Prestige and Duncan Socio-Economic Index (SEI) scales were created by Keiko Nakao and Judith Treas (GSS Methodological Reports Nos. 69, 70, 74). The raw data from which the prestige and SEI scales were calculated are available from ICPSR (No. 9593).

Cross-national Studies

Appendix R describes the ISSP and other cross-national research connected to the GSS. Cross-national data collected by the GSS appear in either the main, cumulative file or the 1992 GSS Reinterview (above). Merged ISSP files that contain data from all countries are created by the GESIS Data Archive for the Social Sciences in Cologne and are available from them (see <http://www.gesis.org/en/issp>).

NOTE: For variables appearing in the years 1988-2016 the following coding scheme was used to note the ballots on which the variables occurred (see Appendix Q)

- 1. appears on ballots A and B
 - 2. appears on ballots B and C
 - 3. appears on ballots A and C
 - 4. appears on ballots A, B, C
 - 5. appears only on ballot A
 - 6. appears only on ballot B
 - 7. appears only on ballot C
 - 8. appears only on ballot D
 - 9. appears on ballots A, B, and D
 - 10. appears on ballots B, C and D
 - 11. appears on ballots A, C, and D
 - 12. appears on ballots A, B, C, D
 - 13. appears on ballots A, B, C, D (but not in Sample A)
- X only indicates whether the variables were asked for a specific year asked before 1988.
- a This variable is not part of the GSS questions, and comes from the administrative data from 2004.

94A, 94B, 94C...indicate the three samples (A, B, and C) used in 1994-2006. They can be distinguished by the variable VERSION as follows:

	94	96	98	00	02	04	06	08	10	12	14
Sample A	1-6	1-3	1-3	1-3	1-3	1-3	1-3	1-3	1-3	1-3	1-3
Sample B	7-9	4-6	4-6	4-6	4-6	4-6	4-6	4-6	4-6	4-6	4-6
